control for minimum plate current, or maximum output if looking at a
wattmeter. You want to keep increasing the loading, and dipping the
plate, until adding more loading, doesn't increase the power out to a
wattmeter. At this point, you will likely show right at about 210 mils
IP. One other reason you should tweak the tuning when QSY, is the
"drive" needs to be peaked up. This also drives the preselector for the
receiver.
>
> It seems obvious that one has to do this whenever changing bands (right?),

Yep! Only small changes, do you not really need to worry.
>
> The manual says the life of the finals are dependent on the tuning period;
> does this mean I don't want to adjust it each day?

The less time you spend at full output, the better. The tubes get hot.
But the 6146's that are in those rigs are very rugged. Just don't get
carried away when tuning. Key for a few seconds , while adjusting, and
then unkey. Once you get the hang, you can tune up in about 1 min or
less. The key is knowing where to preset the loading.
>
> If I wait for the rig to warm up, will it be in about the same condition
> as when it was last on and tuned up, assuming I don't change bands?

Yep, asumming nothing has changed, you can start a yakking.
>
> Any nuances that are not in the manual?
Mainly the ones above..
>
> Any other operating tips, advice, etc. pertaining to this radio would be
> really appreciated. Thanks!

Good rigs. The old rigs have great audio. Transmit and receive. I've had
two 520's and still run a TS830. It's a 520 on steroids. :> MK

Source record: 94868

I had a TS520SE for 11 years.

I tuned it EVERY time I turned it on, or changed band, or changed freq.
more than a few
hundred hertz. I used it on RTTY at 30% and on packet at 100% output.
Of course on voice I ran it maxed.

When I sold it, It had the same final in it that came from the factory.
I had to re neutralize the final once after accidentally running 100%
for a while on rtty, but the output was so close to original, I never
bothered to put in a new final.

Don't worry about a little tune up time hurting it, if you follow the
directions!

KA9CAR

It is in the Outlook Express set up menu. Right click on the icon and weed your way through the tons of gibberish that Microsoft filled it with. It has been a year or more since I did it, so I'm a little rusty. The filter set up is not in an obvious location. Check the Microsoft web site and see if they have anything useful on Outlook Express, also.

references if you don't know them.... I have plenty and will be happy for you to check them."

=-=-=-=

OK Mr Honest Dealer,

Isn't surcharging (3%) on any card purchases a direct violation of your "Merchant User's Agreement"? You had better read it again carefully before you answer It is a direct violation & also questionable whether you can use it for "Other than stated & named business" registered to the card company which is stated to be the conveneince store.

Anyone who pays/paid it can cost you, "an honest dealer", more than his reputation. Maybe you have been reported to your company already.

Buyers of anything: Please be warned & wise to "honest dealers" who practice this tactic. It should be illegal not just immoral, violation of his contract & plain bad business!

All he is doing is beat you out of the additional money so he can recoup their (card company's) cut of his sale.

Such a dealer, but honest is questionable...

Remains to be seen:

Did somebody say "Cha-Ching"?

Thanks Robert.

Replaced the battery (standard 3V lithium) after some minor-rewiring of the
+ pin that I ripped off by mistake, then reset it and it now works again!!

One small problem still exists, though it's probably due to overuse of the
radio - on power on it starts flickering from TX-to-RX continuously for
about 3 seconds on VHF. Maybe the PTT/Function Key button is locking
briefly??? Has this happened to you before?

Back on the air again,
Theo

Source record: 94965

I picked up a used Texas Bugcatcher a few months ago and mounted it on my pickup. Mine has the large coil, which gives super performance on 75 and 40 meters. Obviously the antenna looks a little weird, but the performance is second to none. I had tried the hamsticks previously, which aren't bad for $20, but they are dummy loads compared to the BC. The GLA bugcatcher is built like a tank, although I was able to improve quite a bit on the heavy tophat. I found that a simple homebrew hat, made from copperweld wire, mounted about 2 feet above the coil worked much better than the big heavy stamped aluminum one sold by GLA. If you want the performance advantage of the BC with the QSYability of a screwdriver, it is quite easy to build a a simple motorized L network which mounts at the feedpoint. Fair Radio sells a surplus motorized vacuum variable which allows you to configure such a unit as reasonable price.
If 75 meters is your primary mobile band the BC stomps the competition.

73, de Rich...

2441. FS Pro2032 $100US

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-06 00:00:00 UTC
From: gary-jacek@home.com
Message-ID: <Z_OU3.5396$I82.126018@news1.gvcl1.bc.home.com>
Source record: 94966
Cross-posted to: rec.radio.swap,rec.radio.scanner,alt.radio.scanner,alt.radio.scanner.uk,rec.radio.amateur.equipment

The following unit is surplus to my needs and is looking for a good home.

Pro2032 200 Channel Scanner (Base/Mobile Unit) with original
box, antenna and manual.
Date Code 3A4 (March 1994)

This unit has been operated in a smoke-free environment. I rate it 9/10 cosmetically
(dust),
and 10/10 functionally. The EL display is very bright. It has never been operated mobile.

Modified as follows:

1. Discriminator Tap -- can be used for digital signal decoding with programs like TRUNKER,
RADIO RAFT, etc.
2. Crystal Speedup -- slightly faster search and scan function.
3. Full 800MHz -- as shown at http://members.home.net/gary-jacek/Pro-2032c.html

Click on "Pro-2032 Specifications" to view the factory specifications for this unit.

I have done a DejaNews search and $100US looks like the lowest price you will find
a used Pro2032 going for. So my price is $100US plus shipping. No low-ball offers please.

Payment in advance by Postal Money Order in $US or $CDN equivalent.

If you are like me and use Deja News to research a vendor before dropping money in
the mail, please go ahead and search for me using the Keywords "Gary_Jacek*" and
"gary-jacek*"
at http://www.exit109.com/~jeremy/news/deja.html . I recently changed ISPs so
this will get you a far better "history" of me.

You might also want to bookmark that site as Jeremy's user interface into Dejanews
beats the heck out of the advertisement-laden "official" Dejanews search page.

Please respond by email to gary-jacek@home.com

Rick,

I would further recommend TRX Manager, formerly known as FT-Manager,
which you can look at on the following web site:
http://ourworld.compuserve.com/homepages/f6dex/FTmane.htm.

Laurent Labourie (f6dex@kagi.com) has been very helpful, and has
provided continuous upgrades and support.

Hello, just a quick question about the 290r. I have one and find it drifts quite badly. Now it is not the Mk II but the original model. Have you ever experienced this and so what did you do to correct the problem? I have only had it a while and don't know if I should let it warm up for a longer period of time or try getting it re-aligned or what. Any and all correspondence will be greatly appreciated.
Thanks,
'73 Mike VA3HIE

I have a Micor Base converted a repeater. It has new helical filters on
front end and completely gone over by local Motorola tech for the 2m
band. It comes with a 7k
controller, with all options, including pl. Also it comes with duplexes.

All come with service, and or user manuals.
The scom 7k comes with the windows programming software.

Model numbers are as follows;

Motorola Micor
893RCB-3145B-RH52

Telewave duplexer
TPRD1556

Scom 7k controller

Asking a fair price.

All ready to go on 2m.

Please, serious inquiries only, buyer pays shipping,
and insurance.

2469. IC-746 system for sale in New England

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-07 00:00:00 UTC
From: David Goodwin <railmeat@worldnet.att.net>
Message-ID: <805dtn$8sv$1@bgtnsc02.worldnet.att.net>
Source record: 94744

I have an Icom 746 system for sale. The system includes the rig itself, the standard microphone, the SP-21 external speaker, an Astron RS-35 power supply and a Bencher paddle. The unit's about 18 months old and in mint condition. I am getting out of the hobby and pursuing other interests, hence the sale. I'm looking for about $1500 for the system.

As I prefer not to ship this equipment, it's for sale in New England only. The buyer can pick it up or I will deliver it. If the buyer picks it up here in Vermont, you may take the R-7000 vertical if you want it. It has at least one bad trap now and has had 2 others replaced. It was less than satisfactory.

Email if interested or if you have questions. Thanks for looking...

2470. Help!: Which Filter(s) Should I Choose?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-07 00:00:00 UTC
From: DavidC <eDoc@netzero.net>
Message-ID: <s2ci639boog21@freenews.remarq.com>
Source record: 94745

I have a Kenwood TS-690S/AT for which I have two filters, the
Kenwood SSB Filter YK-88SN-1 1.8kHz and the IRC #94 filter
2.1kHz, both for the 8330 IF.

I have used a 1.8kHz filter before and though it sounds awful it
sure cuts out lots of QRM when needed.

I understand that the IRC filters offer superior performance to the
Kenwood filters. Will I notice a significant difference if I go with
the IRC 2.1 rather than the narrower Kenwood 1.8 filter ?

Finally, is there a filter I could put in the 455 IF that would help?
(I could swap one of these for one to put there) I am only interested
in improving the QRM-fighting qualities for SSB. CW isn't an issue.

- Thanks! & 73, DavidC K1YP

Hi Guys!

Any suggestions here? I see that MFJ makes a hand mic/speaker fopr the FT50 and was wondering if anyone has compared them to Yaesu's handmic/speaker for the same critter?

Thanks - 73 - Ed - KF6YKM

2474. NCTECH Hamfest Nov 12-13 in Texas (This weekend!)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-07 00:00:00 UTC
From: Sexy Guy <david852@yahoo.com>
Message-ID: <HwiV3.3908$Ss1.54706@dfiatx1-snr1.gtei.net>

Cross-posted to: alt.ham-radio.marketplace,dfw.forsale,rec.radio.amateur.equipment,rec.radio.swap,tx.forsale

NCTECH Hamfest opens to the public at noon on Friday, Nov 12, runs through Saturday.

Features large format commercial vendor and individual vendor swap meet, Skywarn class Friday 5pm, VE Test Session Saturday 8am, several demonstrations and forums,
RV Park camping.

Vendor tables are $10 indoors (almost all gone) and $5 outdoors (almost unlimited),
general admission is $2, Overnight RV camping is $8 additional per night. Vendor set up Thursday night/Friday morning.

Talk-in frequency 147.16+ 110.9. Intercom 147.42 simplex.

Location: Between Azle and Weatherford on FM730 at Beaver Creek.

Directions:

From Weatherford, take 80/180 to FM730. Proceed north on FM730 12 miles to the hamfest.

From Azle, take Jacksboro Hwy 199 to FM730 South, proceed south 5 miles to hamfest.

From Ft Worth, take Loop I820 to Hwy 199, proceed west to Confederate Parkway (FM 1886),
take Confederate Parkway west (left) 10 miles to FM730. Take FM730 North (right) 2 miles to hamfest.

One thing you have to watch on those notch filters. They are configured to work only either above the pass freq. or below. If you have moved from hi in lo out to lo in hi out or vice versa, you have to swap TX and RX connections. Hope this helps.

RICK: The 83 is 5 volt 3.0 amp heated rectifier with fairly heavy ratings for a receiver rectifier tube.It has a 4 pin UX-4 base?
I always felt the 83 was a forerunner of the 5U4 (octal base tube). Maybe you could use get and use a 5U4. Have to change the tube base though
Another alternative is to solder two solid state diode rectifiers into an old UX-4 tube base and plug that in. However the full voltage will come on the HT rail immediately you switch on. That may be OK or you could add a bit of resitance into the circuit. Again you may be able to do that on the substitute rectifier tube base itself and not interfere with the units wiring at all.
You mention this is for a tube 'tester'. In that case it may not have any filter capacitors to worry about when putting the full (peak) rectified voltage onto the HT rail.
Just a few thoughts. Also try searching on <duncanamps> for info on the 83.
Regards. Terry S. Torbay, Newfoundland Canada.

Excellent condition and works very nicely. Receive and transmit range
has been expanded by removing a single diode. Does crossband repeat very
easily.

Receive is 118 to 200 and 300 to 1000 mhz.
Transmit is 136 to 196 and 373 to 498.(Covers more but not reliably.)
Cellular comes in nicely on the image frequency.

Comes with the following:
BP-173 high power battery
CP-12 cigarette lighter power adapter
OPC-254 fused power cable
Standard CMP 240 full size speaker-microphone, not a toy sized one.
Instruction manual, belt clip, wrist strap, BC-110A wall charger and
original box.

Everything for $250. U.S. including shipping and insurance from VE2
land. Inquire by email if interested.

2484. FS Yaesu FT-290R original version.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-07 00:00:00 UTC
From: Michel Morin <morinm@csdgs.qc.ca>
Message-ID: <U7fV3.13052$6y2.228747@carnaval.risq.qc.ca>
Source record: 94799

This is the original model with a front mounted removable whip antenna
and a rear panel UHF connector for the external antenna. The inside of the
case has a place to hold 8 C size alkaline or nicads. The output power
is 2.5 watts which can be reduced to .5 watt for QRP operation. It has
dual VFO plus 10 memory channels. The case shows some wear but it isn't
bad. The inside of the battery compartment has suffered some damage
from a nicad that got too hot but it doesn't affect operation, just
some bending of a baffle. It can still hold its batteries anyway.

The radio comes with the Yaesu YM-47 microphone with up/down switch, NC-
11B nicad charger, carrying strap and the instruction manual with a
complete schematic.

Looking to get $250. U.S. including shipping and insurance.
Inquire by email if interested.

HELP!

I'm at my wits' end trying to tackle severe QRN from '91 Ford Explorer while working hf mobile. This trash approaches S9 on 40 and obliterates any signals weaker than that.

Rig is IC-706 getting 12V from heavy leads directly to battery, and antenna is Hustler mounted to a well-grounded bracket bolted to the frame near the left rear bumper.

I know the noise comes from antenna and not power leads...it goes away when I disconnect the coax or antenna, and it remains if coax and antenna are plugged in while powering the radio from a marine battery on the car seat while engine runs.

Some comes from electric in-tank fuel pump - I know this 'cause it does it for only a moment when I turn on the ignition but reappears when the engine starts. It didn't respond to L-C filter wired into harness a foot from gas tank with by-pass cap to ground. (would it REALLY make a difference if the factory part in-tank filter were used?) But there's also other trashy and ignition stuff that the noise blanker doesn't kill. I've grounded the tail pipe and everything else in sight using heavy braid. I've probed all around the car using a portable AM radio and the noise is everywhere...can't isolate it to any specific wiring harness or component - ya' get the radio near anything metal and it picks it up.

I've gone hf mobile on many occasions in the past but haven't experienced anything this stubborn. Is it just a matter of all the digital computer crap, or something unique to Ford Explorers.

Any help would be appreciated.

Thanks/'73...Carl (W5SU)

Hello,

I originally purchased the equipment below for an amateur radio project, but I lost interest in pursuing the project. If anyone else would like to try their hand, or whatever, please be my guest. Phones are in good working condition far as I can tell. Would like to sell everything as a package. Serious offers considered.
TERMS: Prepayment by postal money order, prices include UPS ground shipping or USPS Insured where applicable. I will also consider trades for Motorola Star-Tac accessories such as a Motorola Star-Tac Desktop Charger(s), high capacity Lithium-Ion batteries (black), etc.

(1) Motorola "Flip Fone" Gold Series, dark gray, in excellent condition with leather case, tabletop phone/spare battery charger, Standard NiMh and slim batteries ..... $ 40.00

(1) DiamondTel Mesa 90X, in very good condition, with tabletop phone/spare battery charger, two standard NiMh batteries, car adapter, and instruction manual ..... $ 40.00

(1) Motorola "Flip Fone", lt. gray. This phone is in good condition with standard battery and tabletop phone/spare battery charger ..... $ 25.00

The DiamondTel Mesa 90X and the Lt. Gray Motorola Flip Fone were purchased at a local Amateur Radio show from an individual who I believe was a tinkerer. It wouldn't surprise me if the two were cloned, but I have never actually used the phones. I purchased them for a Amateur Radio microwave project but never actually used them for the project.

I also have the following accessories:

(2) used antennas, one "back of the set" antenna and a "window" portable, both rubber ducks ..... $ 5.00

(1) used battery eliminator for the DiamondTel 90X ..... $ 5.00

(1) Brand New in the package battery eliminator for the DiamondTel Mesa 90X ..... $ 10.00

(1) Brand New in the package 6V NiMh Lt. Gray battery for Motorola "Flip Fones", Micro-Tac, etc. ..... $ 10.00

(5) Brand New in the package 6V NiMh Black batteries for Motorola "Flip Fones", Micro-Tac, Flare, Elite, etc. .....(EACH)$ 10.00

(3) Brand New in the package NiMh batteries for DiamondTel (EACH)$ 10.00

If interested, please e-mail directly n3fvg@worldlynx.net Thank You

HELP!

I'm at my wits' end trying to tackle severe QRN from '91 Ford Explorer while working hf mobile. This trash approaches S9 on 40 and obliterates any signals weaker than that.

Rig is IC-706 getting 12V from heavy leads directly to battery, and antenna is Hustler mounted to a well-grounded bracket bolted to the frame near the left rear bumper.

I know the noise comes from antenna and not power leads...it goes away when I disconnect the coax or antenna, and it remains if coax and antenna are plugged in while powering the radio from a marine battery on the car seat while engine runs. It stays there if I move the antenna to the right side of the bumper. It's NOT there if I try a mag-mount antenna whose shield isn't DC-grounded to the car. But if I connect my coax shield to ground thru a capacitor, the noise is back.

Some comes from electric in-tank fuel pump - I know this 'cause it does it for only a moment when I turn on the ignition but reappears when the engine starts. It didn't respond to L-C filter wired into harness a foot from gas tank with by-pass cap to ground. (would it REALLY make a difference if the factory part in-tank filter were used?) But there's also other trashy and ignition stuff that the noise blanker doesn't kill. I've grounded the tail pipe and everything else in sight using heavy braid.

To start crossband repeater turn on the 2800, set up your desired
frequencies.
Press and hold BOTH main buttons and the CHG/L button.
A flashing key symbol will appear in the display and the radio is in
crossband repeater mode.
To revert to normal just press the CHG/L button

The IC-2800 will not do VHF/VHF nor UHF/UHF

To my knoweldge the IC-2800H will not do V/V or U/U, but will crossband. I had to call Icom tech support and they faxed me a copy of the instructions, as its not in the manual.

There are two ways to crossband, one with 0 hang time. Here are the instructions:

For normal cross-band: Press and hold CHG/L while holding both UHF/VHF main buttons.

For 0 Hang time, Press and hold the CHG/L button while bothing both UHF Main and the bottom key on the VHF side.

To clear the cross band repeat, momentarily push the CHG/L button.

If you find a way for this rig to do V/V or U/U, please let me know!

Carl, it sounds like you have covered many of the bases I would have suggested. You might want to give the Ford Factory people a call and perhaps they can offer some advice.

The problem maybe something peculiar to THAT particular Explorer. I have a 1995 Ford Explorer and for the most part it is quiet (6 mtr, 2mtr, and 70cm). A few little odd birdies here and there but so far I can live with it. However, a friend of mine, who is a radio tech for the County School system, has a 1995 Explorer that had severe interference on some VHF and/or UHF frequencies. We did a comparison using a handheld "sniffing" around under the hood. His Explorer was quite noisy on the handheld. Mine would barely break squelch if you held it within maybe an inch of certain places under the hood. Both vehicles were manufactured within 2 weeks of each other.

For Sale: Motorola Visar Batteries (2) - NO RESERVE!!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=193904760

High-Capacity Battery, 520MB Date Code
Med-Capacity Battery, 628MB Date Code

Both of these are spare parts that I've never needed. This package goes for over $200 retail! Both genuine Motorola batteries. The high-capacity battery has trouble transmitting... It will last a full 8-12 hours in scanning mode receive only, but won't transmit well unless in low power (1-watt output). Sold as-is. NO RESERVE! Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=193904760

Dear Bubbajoe, you better recheck your facts about the 'only filters' in a TS-870. There are two (2) filters ahead of the DSP filter section that are centered on 8830khz and 455khz. Both are not so good ceramic types, and there is a mod out to replace them with a decent xtal lattice type, which greatly improves things, and then the DSP section works quite a bit nicer.....

There aren't any amateur radio type DSP filters that can work at those freqs (i.e., 8830, 455) at this time...At least not in a cost effective solution that you would be willing to pay. The current DSP in the Kenwood 870 works only at a very low (audio?) level, 'after' all the other filtering. Its like shutting the barn door, after the horse has escaped. Better filters would aid the low level DSP section to better deal with the remaining signals instead of having to deal with all the extra crud..

de Jerry

Dear Jerry,
Yes, you are correct about the filters. I stand corrected. I bought an 870 when they first came out because all previous 'dsp' rigs were at the audio freqs -- and yes, dynamic range impacts from adjacent signals still screw up the rx - or as you say close the barn door a little too late.

the two IF stages are filters -- and obviously had no idea there was a move afoot to improve them -- would be glad to follow up on that.

The thing that brought the 870 out a head of the pack - is that they do the DSP at 40MHz which is still a stage above audio. So you can define your transfer function with digital controls and do not have the 'classic' IF filter controls for SSB, CW ,etc.

It is a very nice radio -- I am sure that as DSP chip processing speeds increase (and get cheaper) the digital will move closer to the RF stage.

OK, Wes, I take it back.

cheers

bubba

Is there anything about this transceiver that makes it a *bad* choice for a beginning Canadian Basic amateur (i.e. no code, no HF)? I live in a suburban area, if that makes a difference. I just want to participate in the local activity for now. I don't mind paying a bit extra for the scanning capability as I was thinking of getting a new scanner anyway. Thanks.

It's a good HT, no doubt.

Are there any Amateur Radio clubs in your city/region? That's where you'll find a lot first-hand experiences with folks who are doing exactly what it is YOU want to do!

I could list several other makes and models of HTs that are great dual-band HTs ... but that takes the fun out of performing your own research!

When I was learning CW, I bought the AR-501 Radio Telegraph Terminal, an amazing little unit that not only is an electronic keyer, but reads CW from 1 to 100 WPM. That's right, a keyer that has a built-in LCD that reads not only the incoming CW but your sending as well. Now that I have my code speed up, I am selling it. And it won't cost you an arm or leg either.

If interested, e-mail me and I will send you a JPG of it.

Thanks,

Charlie

Well, I am reading this out of the Kenwood TS-870 service manual. It has four IF's. The first one is at 73.05Mhz, the second is 8.830Khz, the third is 455Khz, while the fourth and last is 11.30Khz. The DSP operates 'only' from the last IF. So as you can see, all those great DSP filters don't do much at all the other IF's that are higher. That 40Mhz clock feeds various things, but that is not in any way the frequency of the DSP unit.

There are some notes on improving the TS-870, which I have not tried (yet), and you may find them of interest at:

http://members.aol.com/ve3bmv/TS870mods.htm

regards Jerry...

Hi,

I have an Icom 745. It's been used very little and is in great shape. Everything still works, but I understand that once the battery which feeds the ROM goes dead, the radio will cease to function. A couple of months ago, I ran across a URL for a guy who sold a firmware upgrade for the radio which eliminated this problem, and I would like to purchase the mod. Unfortunately, I have lost the URL. Does anyone have it? If so, would you please e-mail it to me at robert.dwiggins@alumni.utexas.net or post it in this newsgroup.

73,

Bob, WA5IHZ

Hey!

While mobiling around, and working those rare DX stations, I have found it rather frustrating to scramble for paper and pen. I don't have an easy way to install a laptop in the car, either.

So, I thought, "I can use my Palm Pilot" and create a memo. But that was a bit of a pain. What to do?

Create a log program! That's what I did. It is now version 0.1 -- and works ok.

You have a Palm Pilot? Wanna use this logger? Come download the free Application at:

http://hfradio.org/softdown.html#hflog

I have been using it during my jaunts. Helps. It is very simple, and very basic.

Send comments to: hflog AT hfradio DOT org (you can figure out the address)

In other news: The NW ARRL (Northwest Section of the ARRL) website is now hosted at http://hfradio.org/nwarrl/ - and I have been appointed as new Webmaster. If you are in the NW, and have updates, etc., please let me know. If you are interested in the NW Activity, etc., come check it out.

Also, I am still offering free websites for HAM and SWL sites. Want to make your own page? Come and fill out the form.

Don't forget: http://hfradio.org, a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a

Software editor -- someone who can review and post software links, etc. Let me know if you are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Source record: 94879

I have found a new use for the Kenwood 261A 2 mtr fm radio.Basically the heat sink gets so hot on high power even after short transmissions that you can use it to cook : Bacon, hamburgers etc. I found if you tilt the radio with the display higher up that the back ...ALL the EXCESS FAT drips out and I put a small pan to collect it. The Burgers are still moist and delicious and the excess fat doesn't go into your body.
Kenwood should use this on their advertising.

2540. Need HELP with Sinclair Duplexer

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-07 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <382516f4.54382739@news.pacbell.net>
Source record: 94888

Hello All,

We were in the process of tuning a Sinclair duplexer to our frequency pair on the 2m (144 MHz) Ham Band. The big passband cavities works just fine, but the notch filters will not notch out the frequency that we want. It seems that the 4 notch filters are weathered, so we may need to replace them.

Here is a brief discription of the notch filters:

There are 2 notch filters, a pair, on each bay of cavities.
Our duplexer consists of 4 cavities, two on receive and 2 on transmit.
There is a total of 4 notch filters. The notch filters, on there right now, do not seem to be the usual ones that came with this duplexer.
It consists of a brass tube, about 1/2 inch dia., that slides up and down a thin rod and makes contact with a larger rod 1/2 inch towards the base of each notch filter.

The notch filter's tube on the receive side is about twice that then on the transmit side. This cavity was supposedly on 146.700 Mhz.
If anyone out there has plans for a notch filter that would work with this duplexer, or if someone has one to sell, PLEASE let me know.

Any help is appreciated. The model number is: F-150-4E

Source record: 94694

I’ve got a IC-T2A 2 meter HT that fits my needs just fine with one reservation. I mostly use it in the car or at home and am tired of the battery pack running low just when I need it most. I could get another battery back or have a bunch of AA’s handy but I would rather plug 13.8 directly into the radio.

The stock external power plug is only good for charging the batteries but I’ve thought about buying another AA battery back and modding it to accept 13.8 from the cigarette lighter. That modded battery back might also include any regulation circuitry.

Has anyone done this? Any considerations I should be aware of?

Thanks!

2547. FS: HR-2600 $150 + shipping

Hi,
I have an excellent condition HR-2600 Uniden 10M all mode radio.
Includes Radio, Original Manual, Original Microphone, Original mobile
bracket.

Radio is 9 on scale 1-10. Never mobile.

Covers 28.0 - 29.7. All modes (AM/FM/SSB/CW). 25 watts output.
Has built in VSWR meter, CTCSS/PL Tone Encoder. Does split for 10FM
repeater use too.

Tuning mechanism on radio has been modified to "chip switch" optical
encoder shaft which allows for smooth frequency change without the
"click click" feel. In other words, tunes like a "big rig".

Price is $150 FIRM + shipping
thanks,
Joe

2549. Product Review: Radio Shack HTX-10 10M allmode rig

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-08 00:00:00 UTC
From: Joe K7JOE <K7JOE@yahoo.com>
Message-ID: <38271FE5.B3B95784@yahoo.com>
Source record: 94697
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

This is copywrite 1999 by K7JOE, all rights are reserved.

Ladies and gentlement,
Having gone into Radio Shack yesterday to buy a couple feet of RG-8X coaxial cable, I came across a new offering in amateur radio gear. The new Radio Shack HTX-10 10 meter HF mobile radio.

Unit tested is serial number 3xx, so one of the first out of the gate.

This is a new entry into the 10 meter mobile market. Here are some features:

Freq Coverage: 28.0 - 29.7 Mhz
Modes: AM, FM, LSB, USB.....there is no CW capability
Power: 25 watts nominal LSB, USB, FM. 8 Watts carrier on AM.
Freq Tuning Rates: 100 Khz, 10 Khz, 1 Khz.
Fine Tuning: moves both TX and RX frequency +- about 2.5 Khz
Accessories: mobile bracket, mic, and power cable.

Upon seeing the radio, one does a double take -- the radio looks almost identical to the current offering of SSB CB radio. The noticeable differences are few: The 10M rig offers an up/down microphone, the 10M offering says "10 meter HF transceiver" on the face plate, and thre 10M hf radio has a significant heat sink on the back panel (integrated into the back panel actually).

Powering the rig up, one notices the very bright LCD display and backlit volume, squelch, channel/frequency knob, and mic/rf gain knob (concentric knobs). The six multi-function buttons are not back lit, but are labeled in white lettering.

Hookup uses a now-industry-standard T type molex cable. I simply unhooked my Kenwood 2M mobile and plugged this into the car. Antenna used was a 8 foot whip for 10 meters.

What's good: SSB TX audio reports were excellent, though I did tend to over drive the radio. Adjusting the mic gain from full blast to about the 1 oclock position helped. Power out on my peak watt meter indicated 27 to 28 watts of RF out on SSB, about same on FM, and about 9 watts carrier on AM. The Mic and RF gain knobs are dual concentric knobs on the shaft...be careful to adjust only the mic gain down, and not the RF gain too!

The noise blanker is excellent -- very effective with ignition noise.

This radio does repeater splits, and the splits can be programmed. When first getting the radio, it was programmed with a 600 khz split! Gee, I thought -- perhaps a tech at the factory in Korea programmed the radio thinking it was a 2M rig perhaps? since the normal 10M repeater split is only 100 Khz. But, this is easily reprogrammed with a few keystrokes.
Too bad -- the radio does not provide CTCSS encode like the HR-2600. SO, you are restricted to carrier operated repeaters only, or need an outboard tone encoder to access toned 10FM repeaters.

There are 5 memory channels to store favorite frequencies, modes, shift, etc. Nice.

Band scan is available and is carrier operated only. Memory scan is not available/offered.

Interesting to note the output in FM is a full 25 watts. Not sure how it will hold up in that mode for continuous duty....hmmmm. Most of the other offerings gave significantly less output on AM and FM compared to the less heavy duty cycle modes like SSB and CW.....time will tell.

Ergonomic comments: freq selector is obviously from it's cb brethren -- it is clickety-clack and no different in size from the other knobs. The six multi function buttons are not back lit, and white lettering could rub off. The clarifier (Rit/Xit) knob functions as a "f" button (push it to get to the sub-menu) -- I found myself moving the transmit/receive frequency when hitting the button. Could have put the F-function on the squelch button instead...my opinion only. Mic is light weight and cord is not really good "flexible" one -- kinda stiff. Microphone jack is not the normal 8-pin connector or 4 pin connector that's common on ham gear. Nor is it the new modular jack connector -- it's an odd 6 pin connector. Not something RS stocks now, and probably a 5 or 6 dollar item at mouser, if you can find it at all.

There is no provision for VSWR meter, though there is an S/RF meter at the bottom of the display. Frequency resolution is only 3 digits past the decimal point, so, probably not ideal for the digital modes (though the fine tuning/clarifier does move both TX and RX frequency to zero in on an exact frequency). There is no provision to turn OFF the RIT/XIT. They are tied together and "on" all the time.

Received audio distored slightly at higher volume levels, but an outboard speaker helped a lot. Use one if going mobile, I suppose.

Under the hood: Wow, have 10M multimodes changed in the past few years. No point to point wiring. 2 circuit boards only -- one main board, one display/front panel board. All surface mount technology. Decent looking crystal monolithic filter. The final amplifier transistor line up is the familiar 2SC-1969 -- capable of about 15 watts PEP each. There are two transistors, running in class AB1 configuration. Nice to see a commonly available (and relatively inexpensive) final PA being used.

The board components and variable adjustments are NOT labeled. Disapppointing, since tandy's HTX-100 was well labeled for ham adjustment. This one will need a service manual. Worse, there was no schematic diagram enclosed. This was real disappointing for a "hacker ham" like me.
Overall, Tandy should be complemented for hanging in on the ham market. The sad news is that the products are getting "cheaper" both price and perhaps quality wise. The recent entry in the HT line is certainly no HTX-202, and, I dont believe this HTX-10 is constructed as well as the HTX-100 was (a Uniden clone running CW and SSB only). FYI, the 2M radio -- the HTX-242 mobile is now discontinued -- interesting to see what is brought out as it's replacement.

At $149.95, this looks like a fair value for the new "code priveleged" ham. Bear in mind it is lacking CW capability (perhaps a sign of the times to come) and has some of the shortcomings noted above. At the same time, it is very competitively priced, offers 25 watts of output power, and is available across America.

Hello Tinkerman,

I think you can download the servicemanual at

http://www.produktinfo.conrad.de/datenblaetter/200000-299999/252352-sp-01-en
-UBC_3000_XLT_Scanner.pdf

Its 1 long address.
As far as I know the file is approx. 9 mb.

I hope it helps you.

Greetings,

Eric
Netherlands

Hi,

What's the difference between a Kenwood TS-520SE and a TS-820S?

Bigger number = better? :-)

thanks,

--

Robin Staebler <Doc@k3fp.com> writes:
>Conversion of Aircraft Mic/Headsets:
>I believe these require a power source or pre-amp for the mic element?
>anyone have any ideas??

The original aircraft mics were carbon type, where sound waves varied
the impedance of a bunch of carbon granules packed together. They
do require series current to produce a signal.

All modern aircraft mics are dynamic or electret mics combined with
amplifiers to make the mic behave about the same as a carbon mic,
in terms of signal voltage and current drawn. Power for the
amplifier comes from the radio's mic circuit.

Now, current amateur radios seem to use electret mics, and the radio
provides power to the electret capsule's internal amplifier via
a resistor. So the basic mic circuitry in both aircraft and ham
radios is probably very similar: a series resistor to provide DC,
and a capacitor to pass AC while blocking DC.

But (and I'm guessing here) I expect the signal levels are quite
different, and operating current may be as well. Electret mics
have internal amplifiers, but they put out just a few millivolts -
comparable to, and thus compatible with, unamplified dynamic microphones.
I think carbon mics are capable of a few *volts* of audio signal.

So, to use an aircraft mic on amateur equipment, you might well need
a resistive pad to *reduce* the audio signal level. You might also
need to provide more current than the HT mic input is prepared to
provide.

I've owned my 847 for just over a year, and overall, I like it. There's a few things that I would have liked Yaesu to add to it, such as a VOX, or a DSP that works a little better. I use it mostly for base operations, and sometimes mobile, and so far have had very good luck with it. I think that it's a good buy.

Hello All,

I am listing this for a friend of mine.
He is selling his CushCraft MA5B Five band, 3 elm HF Beam.

It was only used of 2 weeks!
Bands covered: 10,12,15, 17 and 20 meters.
This beam is GREAT for small-tight fitting locations.
The boom is only 7 feet long!
This is a 3 element beam.

My friends want it ONLY picked-up!
Anyone within 200 miles of Tehachapi, CA (Near Bakersfield, CA), he
will meet 1/2 way.

He paid over $300 for this, but he will sacrifice $200.00 picked up.

Please contact Lee, N6LTP via E-mail or Phone.

Lee's E-mail: mega1@ca-connection.com

Work Phone (10:00 AM-6:30 PM Pacific M-F): (661) 822-5000

Home Phone: (661) 822-9536

Thank You for reading & 73,

Mike KQ6MU

And Yaesu is VERY good when it comes to customer service. I recently contacted them about a continuous battery drain on my FT-50 (even when the radio was off.) Even though the radio was a couple of years old and out of warranty, they were more than glad to have me send it in for repair at no charge to me. When I got the radio back (in just under 3 weeks - less time than they had estimated) the invoice informed me that they had not only repaired the current drain, but had replaced the on/off switch - all at no charge to me.

Usual disclaimers apply: No connection to Yaesu, just a happy customer.

Check out this page: http://www.en.com/users/rayd/ft-847/
Mucho info on the 847 here. I've owned one since Sept.
and I love it. If you are heavy duty HF op you probably should
pass the 847 up. I've owned a IC735, TenTec 540, TS520,
TS820 and the 847 has the best receiver of the bunch. The
lack of VOX does suck.

Does anyone have an opinion on this radio? Is it now obsolete?
What is the difference between a 742a and 742ad?
Any owners to comment on performance/reliability?

Thanks
Keith

Hello Wes, as I understand the TS-870, it is one of the few fully digital rigs, including filtering, available on the market. I wonder why one would choose to add any more IF filtering than is already digitally available? 73, Dave-KA4CNH

Well, thats not quite correct. It has two (2) I.F. filters at 8.830Mhz and
455Khz ahead of the DSP filter (11.xxKhz) section. They are lousy filters, thus
the interest in improving them...

de jerry...

Joe, I may be interested in the RIG. For a friend of mine. I already
have one with the CHIPSWITCH installed. I love it. Where did you get
that "TUNING MECHANISM, the Optical encoder shaft??? I would like to
have my tune like a
"BIG RIG"

Thanks in advance, Dave/N2JBO.

I'd like to wire up an adapter to power my used Alinco
DJ-580T from the cigar lighter in the car.

Anything special I should know, such as the recommended fuse
size, etc.?

- Thanks! & 73, DavidC K1YP

Try calling the manufacturers of the iron. The usual steel companies, like Armco, etc. They can refer you to sources of laminations and give you catalogs. Who knows, they might even give you samples.

Well,dunno 'bout current draw on that unit so can't comment on guage/fuse size but
I would suggest a filter of some description to help with alternator whine etc.

This is a beautiful small in size RF Deck using Three 4CX250Bs.
It has two Vac caps, with counters on both and really nicely
constructed. Dates back to the late 60s-70s. This was a military amp
tunable on all the bands. Matches the Collins KWM-1 in size and color.
Could use paint and a power supply. $250

Hello, David!

With fresh, neutralized finals, you'll see from between 140 watts out (75m) to around 90 watts (top of 10 meters). If you're running CW or AM, roll the carrier back for no more than 75-80 watts. Your finals will thank you!

(A BETTER WAY TO QUICKLY CHANGE YOUR H.T. ANTENNA)

Saves your radio's SMA antenna connection from damage due to having to change antennas to suit your needs. Allows you to quick change your present BNC or better quality than stock antenna.

Adapter has gold pins with a black neoprene rubber covering. Will fit all BNC antenna connectors. Low profile(only adds 1/2" to 5/8")(depending on radio model)to overall antenna height. Rubber base seals against moisture and dirt,plus provides a positive support for all your antenna applications. No need to remove once installed to quickly change your antenna.

(Looks like an o.e.m. part and functions great on my Yaesu vx-5)
(Not like the big ugly one that I bought with my radio)

(SIZES TO FIT THESE RADIO MODELS)

YAESU:(VX-1)(VX-5)(FT-50-R)
ICOM:(IC-Q7A)(IC-T8A)(IC-R2)
KENWOOD:(TH-G71)(TH-D7)
ALINCO:(DJ-V5)
AOR:(AR-16)

$11.95 + $1.50 (S+H) (CHECK OR MONEY ORDER)
(SPECIFY RADIO MODEL WHEN ORDERING)
STEPHEN G. GULYAS 706 LALOR ST. TRENTON,N.J. 08610

(AVAILABLE DIRECTLY OR AT HAM RADIO OUTLET (DELAWARE)
(??ANY QUESTIONS??) E:MAIL gulyas@netzero.net

From: davem@groucho.cs.ubc.ca
Message-ID: <806123$4hq@groucho.cs.ubc.ca>
Source record: 94765

edparry@REMOVEgte.net (Ed KF6YKM) writes:
>Any suggestions here? I see that MFJ makes a hand mic/speaker fopr the
>FT50 and was wondering if anyone has compared them to Yaesu's
>handmic/speaker for the same critter?

I do have the Yaesu speaker/mic. I haven't seen the MFJ one to compare
it to. Some notes about the Yaesu:

- It appears to be built to the same sort of water resistance standards
as the FT-50 itself. Since when I'm using the radio in the rain,
the radio is likely to be inside my coat and the speaker/mic will be
outside, water resistance is even more important for the mic than the
radio.

- It looks like it uses about the same size speaker as the FT-50, but
it's somewhat "tinnier" sounding. This is probably because the
radio makes a much larger "speaker cabinet" than the speaker/mic
body does.

- There is a jack on the bottom of the unit where you can plug in
an earphone, converting it to an earphone/mic (with the speaker
disabled).

Dave

2604. FT50R - Power On/Off

2613. Heath HM-102 wattmeter and other Heath items FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-08 00:00:00 UTC
From: Ken Simpson <W8EK@fdt.net>
Message-ID: <mTzV3.3409$J55.209956@monger.newsread.com>
Source record: 94775

Heath items for sale:

Heath HM-102 Wattmeter. This is the HF version of the
wattmeter. It has scales for 200 W and 2000W, as well as SWR.
It has a removable remote sensor, so the meter can be about
3 feet from the sensor. This one looks in great shape, not quite
like new, but close. Manual included for $ 40

Heath HD-15 phone patch. Separate control of transmit and
receive audio, with nice VU meter. Will work with high or low
impedance mic input. Manual included for $25

I also have the following Heath manuals available. All are
originals, and are in good condition.

HWA-7-1 Power Supply manual for HW-7 or HW-8.
Manual is new, with NO check marks in it. $ 10

HN-31 A Dummy Load manual. Note the "A" suffix. This is for the
newer model that does not have the tap for the scope. The
manual is in the smaller "half size" format. This manual looks
like new, and has NO check marks in it. $ 8

GR-2050 TV Set - Five book set $ 15
GRA-601 TV Clock $ 5

All manuals are in good shape. All are originals and not copies.

Prices do not include shipping from Florida.

Thanks.

73,

Ken, W8EK

From: G SEVEN <superiorwavelength@prodigy.net>
Message-ID: <806slu$3hn2$1@newssvr04-int.news.prodigy.com>
Source record: 94781

Siltronix 1011D "Comanche"

The Siltronix is a side band tranciever is designed to be used in SSB or AM modes. Frequency range is 26.94-29.0 Transmits and recieves on 11 meter. 300 watts P.E.P. 100 watts AM. This transmitter is not so great for AM but does great for SSB. This radio has a tendency to drift and therefore earned its name "Sliptronix". When left on for a long period of time it reduced that problem considerably. This is a older tube radio and comes with a Turner Plus Three microphone and manual. This radio is in great shape cosmetically. Below is a pic. of this radio, the speaker in the picture is not included in this offer. The pic below is a 1011C mine is a 1011D, they look the same. $200.00

Q1: Does anyone know a way to "erase" a memory (using the keypad), so that it returns to the pool of unused memories and is seen by the automatic ("next free") channel counter?

Q2: Can the ADMS1E or EVE software erase a memory location and reset the "next free" counter to see it?

Q3: Does anyone know how to view a "hidden" memory location without first un-hiding it?

Thx.

I have an IC900 for sale with 2m, 220, 440 installed. Is in working shape, but some of the mounting brackets are missing (way it was bought). It is a very hot (sensitive) receiver especially on 2m!!

The 1st $550 takes it!
Postal money orders, or cashiers checks only.
Shipping included.

I have a Micor Base converted a repeater. It has new helical filters on front end and completely gone over by local Motorola tech for the 2m band. It comes with a 7k
controller, with all options, including pl. Also it comes with duplexers.

All come with service, and or user manuals.
The scom 7k comes with the windows programming software.

Model numbers are as follows;

Motorola Micor
893RCB-3145B-RH52

Telewave duplexer
TPRD1556

Scom 7k controller

Asking a fair price.

All ready to go on 2m.

Please, serious inquiries only, buyer pays shipping, and insurance.

I agree. Before i was married with children I had a lot of extra disposable cash. I also feel that a lot of hams has a mnetal disorder called "MANIC DEPRESSIVE DISORDER". Basically they buy the latest and greatest when it comes out at the highest price. Then they have to sell the radio at a significant loss as the New prices have come down plus it is used.
Then they buy the next model etc. Each time they sell they loose $$. IT does add up. I shudder at the thought of all the $$ I have spent on the hobby.

>once. Specifically, I want to be able to simultaneously listen to 2
>frequencies in the 160 Mhz railroad band.

Do you actually want to receive both signals simultaneously, if both bands are active? Or would it be adequate to listen to just one of them, as long as both frequencies are monitored for activity when both are idle?

True dual-receiver radios like the FT-51 will actually monitor two frequencies simultaneously, playing the audio from both. In the case of the FT-51, you have to set the "UHF" side of the radio to a VHF frequency, and it will do that - but its sensitivity is probably worse than the side of the radio specifically designed for VHF. That's likely true of most such radios with "V+V" receive.

However, I find hearing two signals simultaneously confusing, so I have my FT-51 set to "mute" - this kills the audio on the "sub" receiver if there is activity on the "main" receiver. So if both channels are active at once, the only indication I have of that is two green LEDs and two active signal strength meters - I can only hear the one signal.

And if only hearing one signal at a time is OK, any scanner and most single-receiver HTs will let you scan between two frequencies looking for activity.

Dave

Message-ID: <3828E779.67C7E6D1@worldnet.att.net>
Source record: 94605

I remember that story too. I think that it was 6M that blew up the 2M front end. For my IC706, I put a diplexer on my 2M side, to protect the 2M front end from 100W on 10M. (My antennas are 3 feet apart). The diplexer has many db of attenuation on 6M on the 2M port. The diplexer also allows me to use one antenna for 2M and 6M. I flip a switch to go from 6M to 10M. To see my installation diagram, go to www.qsl.net/ka0dxm

2644. Looking for a good Handheld

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-09 00:00:00 UTC
From: aardvark <aardvarkiq@JnUaNcK.net>
Message-ID: <3828EF8F.464BA311@JnUaNcK.net>
Source record: 94606

I plan to get my Technician license around christmas time and was
wondering, which is a better radio, I know that the Icom IC-Z1A was
discontinued a while ago, however I like the fact that the face is
detachable. Which is why I also am leaning toward the Yeasu FT-51r, the
face is not detachable but there is an available mic with LCD display
the "MH-29A2B".
As for current Icom models how about the IC-W32A how does that
compare to the previous two radios?
What is the difference between the IC-W32A and the IC-W32E, I'm
going to take a shot in the dark and say that the "A" denotes the
American model while the "E" denotes the European model?
Lastly the W32A has an optional mic "HM-75A" is this mic similar to
the FT-51r LCD mic? I can't find a picture of it anywhere.

Thanks in advance for the help,
john

Hello Jason,

I use a DVS-2 on an FT-1000D. It has a 20 second record time that lets you replay the last 20 seconds. great for listening to calls and QSL manager info when there is QRM etc.

It has 2 or 4 voice memories that you can record CQ, exchange, etc.

I use mine a lot and think it really helps both DX'ing and contesting.

No offense to Mr. Dahl, I'm sure he builds an excellent product. As any of you know, HV transformers are getting like hens teeth to find. Even Fair Radio Sales has only a small selection any more.

Other than cannibalizing old transformers, does any one know of a source for "E" and "I" pieces for the core of a transformer? I would like to try my hand at winding transformers. I did it as a teenager and got pretty good at it.

Many thanks in advance.

Source record: 94646

The 742 is a current model in the Kenwood line.....not sure about the AD model. Comes standard with 2m/70cm with an open slot for 10m/6m/220MHz/1.2GHz FM.

There is no other radio that does it quite so well for a tribander!

It is a little "long in the tooth" but it is also one nice radio.

Wish you could program it via a serial port etc.....but it is still a great radio with all kinds of features.

The frequency counter on my MFJ 259 undercounts slightly but consistently. I would like to adjust this, but nobody at MFJ seems to have a clue--I've spoken to them a couple times about the matter and have conflicting information or directions, none of which seems to have any affect upon the reading. If anyone has a thought on the topic, please contact me.

>I believe these require a power source or pre-amp for the mic element?
>anyone have any ideas??

Aircraft radios are designed to work with a carbon microphone (like the old telephone elements). It's been a long time since I fooled with circuits for these & the memory is a bit fuzzy, but they are a high-level microphone - somewhere around a volt, maybe. The mic jack on the radio supplies the DC bias for the microphone, which is basically a resistor which varies its value in proportion to the audio it hears. To use a low-level microphone with a carbon mic input, the DC bias is used to power a transistor preamp.

To use an aircraft mic on a low-level mic input, you need to know if it's really a carbon mic (probably not) or an amplified low-level mic. If it's the amplified type, try just bypassing the amplifier. I've never tried to adapt a carbon mic to a low-level input - I suppose it could be done. Have fun.

I have wound loads of them. I find that some of the cheaper mains "auto transformers" of the kind that transform 115v to 230v or 230v to 115v are dirt cheap. The sort I usually get are about US$6, made in Spain. Undo the two bolts and the whole lot almost falls apart.

there's hardly any wire on the things, so you can strip it down in a few minutes and have a perfect plastic bobbin to fit the E and I laminations. Just two small words of warning:

1. Don't consider re-using the wire or using it as a ready-wound primary. The last few I bought in Saudi did not even use copper wire!!
2. Lightly varnish one side of the laminations with a decent spray varnish. They are usually lousy insulators and the txfmr tends to run hot if you don't.

The transformers I make all run stone-cold. if you want to see a 50-watt transformer in a project then i have one on the web. Take a look at http://sm0vpo.8m.com/tx/2tubetx.htm the third picture down the page. Sorry the picture quality is so lousy, but - a) it does the job - b) its free.

I have seven (5) Panasonic WV-1414 CCTV cameras with lenses all in fine working condition that I would like to trade for some type of ham gear. A picture of one of the cameras can be seen at:

http://www.usol.com/~tje/pancam1.jpg

They require 24 VAC power. I can also provide power transformers for them if needed and the right deal comes along. These cameras are used but in great operating condition. Please email me with what you have to trade. PLEASE NO converted commercial vhf/uhf stuff.

One source of cores that may be good subjects for winding are industrial isolation transformers.

They come in various KVA ratings - starting around 1 KVA and going up. They are complete with both primary and secondary wings and may be 1 to 1 or 2 to 1 or higher. You may find them at a dealer that handles industrial surplus.

They have an advantage in that you know they can handle the power and they already have the primary (you have to make sure that the secondary is on the outside) so there's less work to get the final output voltage you want.

I also had one and it overheats with very little keydown use. Perhaps Kenwood USA should advertise the Radio as a cooking machine like the George FOREMAN GRILL. IT "KNOCKS OUT THE FAT". You are correct. I could put 6-7 hotdogs along the heatsink and the Excess fat will drip to the rear of the radio into a small plate. This Kenwood will help me deep my Chlorestrol level down.

Does the switch work when the rig is disassembled?
Just curious. I have two and havn't seen the problem yet.

Is it possible that the button is sticking? since a long hold turns
it off, if the button can't be released quickly it would cause this
type of problem.

2681. Re: Diff between TS-520SE/TS-820S ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-09 00:00:00 UTC
From: John Dewey <KA9CAR>
Message-ID: <809n8b$lo48@news.tis-in.trb>
Source record: 94675

I owned a 520 SE (economy model)
It did NOT have an internal 12 volt inverter, or the transverter in/ouputs.
The 520 had a place for 1 crystal filter, usually a 500 htz was the option
people bought. I think the 820 had more postions for crystals. It is my
recollection that the receiver in the 820 was supposed to be superior, and
it had an fsk input. I added the fsk input to my 520 SE.

2682. Re: Was there a tuner&pwr/swr meter for Knwd TS-520 series?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-09 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <yy_V3.174$HI1.12646@dfw-service2.ext.raytheon.com>
Source record: 94676

Gil,

The matching accessories for the TS-520(S)(SE) series were:

MC-50 microphone
SP-520 external speaker
VFO-520 external VFO (for TS-520)
VFO-520S external VFO (for TS-520S and SE)
DG-5 digital frequency display
TV-502 2m transverter
TV-506 6m transverter
AT-200 antenna tuner
DC-1 13.8 VDC converter (stardard on TS-520, optional
with TS-520S, not usable with TS-520SE)

If I've missed anything, please forgive. Going from memory,
and it's been a LONG time since I've owned a '520.

73,
Dean - K5DH

New in the box. Purchaced at recent hamfest. It's not what I wanted.
Mint condition. Has 7.2v low power battery. Can do 5 watts with 12v
battery pack or dc power cord. Has out of band 127/132 to 170/172??
also has AM receive capabilities for the aircraft ban. Will sell for
exactly
what I paid for it. $100 plus shipping.

e-mail KG0LN@arrl.net for details and payment method will get details for

shipping when I know were it's going.

2684. noise problem on break-in keying

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-09 00:00:00 UTC
From: gagnon@gagnon.fakeu-net.com
Message-ID: <38287450.1288788@news.u-net.com>
Source record: 94678

I have an ICOM 735 which until recently has been a fantastic rig. Lately, on full break-in keying only, the receiver noise bursts in-between characters have become distorted. It seems to be pulling in signals from around the band, when on normal receive the band is quite quiet. Some sort of intermod perhaps?? seems to be getting into the receive circuit only when I use full break-in keying at higher CW speeds. Could it be something as simple as dirty relay contacts now that the rig is about 12 years old??

Any suggestions would be appreciated.

Larry MW0AWC

>This is copywrite 1999 by K7JOE, all rights are reserved.

An excellent review, Joe, and completely accurate with respect
to my own experiences with the rig (I bought one last week).

A couple points to add to it:

1. The SO-239 connector on the back of the rig is fairly short
and if you don't have a _very_ tight connection to your coax (at least
using a standard 10m/CB antenna--I tried two on two different rigs) the
radio exhibits a very peculiar response--in FM mode it will "hang" on
transmit (requiring you to turn off the rig and turn it back on to stop
transmitting!).

2. The manual is _woefully_ incomplete. Among other things, it
doesn't even bother to mention that you can scan in either direction by
simply turning the tuning knob (or pressing the down button on the mic)
to move in the negative direction. The instructions are obviously
written for the CB type buyer who normally doesn't "tweak" a rig but
uses it out-of-the-box, and (as you point out) advancing the mic gain
fully clockwise (as the manual instructs you to do--even indicating that
it will reduce power out if you retard it) creates a radically
over-modulated signal!

3. If you purchase the rig with the Radio Shack CB/10M mobile
antenna (part number: 21-996), you can ignore the statement on the
antenna package that it can only be tuned to a 600 KHz. segment of the
band. With careful trimming of the radiator, it is perfectly possible to
obtain a 2:1 or better SWR from 28.300 to 29.700 (as the radio has no cw
capability, tuning it for use below 28.300 is pointless--the ssb filter
is far too wide to allow good cw reception), with the entire ssb band at
1.5:1 or better.

Overall, it's not exactly up with my FT-920, but it _did_
provide the opportunity to add HF to my car before I had it budgeted (my
tax rebate is going for either an FT-100 or an FT-847 :), and it does an
excellent job for a very low price. Hams on a tight budget will find it
a real value.

Rick

I cannot believe that RT Systems has done it again... The software
that I purchased for my ICOM 2100H as well as ADI AT-600 radio
both are crap.

Plane and simple, this software cannot write proper memory
locations to/from the radio's DTMF banks.

Anyone have an old dos version of the 2100H software?

John
Yes it could happen. If the HF and VHF antenna are too close you can short the switching diodes in the 2 meter portion of the receiver when transmitting on 20 meters. I don't recall the particulars but I remember reading the articles. I owned an IC-706 and used it mobile without any troubles. I had about 9 foot separation between the Hustler HF antenna and my 2 meter antenna.

Wow! Great info, but I had a hard time viewing or downloading it.
For some reason, the URL is split into 2 lines (see your post to this
newsgroup), and even when I corrected this and tried to open the
corrected URL the file was too large to view in Netscape (it crashed
Netscape, although I DID manage to view the first page).
It seems Netscape doesn't support downloading a document directly
(which isn't a valid link on another HTML page) and also splits lines
on very long URL's..
Any ideas how to download it without opening it?

Thank's a bunch!

Thanks and best regards,
T-man

this may or may not relate to your problem but it's something to think about.
18 years ago, my ex and i were living in an older house.
one night, i put the baby's bottle into the microwave oven to warm it. as soon as it turned on, the tv and lights brightened consederably in one side of the house and returned to normal when it shut off.
kind of makes you go, hmmmm.
anyway, i got out my volt meter and checked the voltage on that circuit to find that it had jumpped to 170 volts.
i called the power company which came out and checked the mains at the meter.
it turned out that the aluminum wire for the ac neutral had corroded which, when the microwave loaded one leg, made an imbalance in the main on the other leg.
he cleaned the connection and reconnected it which solved the problem.
the call was free as it was at the meter and not inside the house.
good luck.
jeff

2708. Re: SMA-TO-BNC RUBBER COVERED ANTENNA ADAPTER

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-10 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <80ceaj$pm3$1@birch.prod.itd.earthlink.net>
Source record: 94548

I would STRONGLY caution against any 'adapters' on HTs.

No, they work. And yes, I've used them.

But when you use an 'adapter', you now have a 'mechanical'
issue.

If you want BNC, change the radio over to BNC.

If you want to get to a coax, get one of the adapters that have a
short length of cable, not a 'hard adapter' thing.

I've seen radios like the Icom u4 where the entire internal "L" bracket
the antenna jack is mounted to come loose from the mechanical
stress.

If you choose to use these things, BE CAREFUL. IE, be gentle
with the radio if you want it to last.

Mike

>a pair of closed jumper blocks near the final area. Hmmmm....

i don't know who really makes this radio but the better built uniden cb radios
had eithet cutable jumpers or a set of forks sticking up out of the board with
a piece of blank double sided pcb wedged into them.
when cut / removed, it allowed a milliamp meter to be connected to adjust
driver and final bias settings.
this may be what the jumpers are that you refer to here.

Some folks have problems with some of the software Clint that's
no reason to be:

a smart ass
b pompus
c insulting
d all of the above.

You don't work for RT so stop trying to be their PR man. Have you
ever tried the Icom and/or ADI software do you have a clue about
it? Didn't think so. Thanks to Mr. Lowe for a "heads up" that there
are problems with that software.

Source record: 94558

to "readjust" cb radios, i've used crystals of certain fundamental frequencies in their third order mode. if one were to take a 13.150 crystal and pull it down to 13.1316, it would give the same results in most cases as the circuit might be a 3rd order ocillator in which case it would triple the 13.1316 up to something close to 39.395 mhz..
i have also used 3rd order crystals, divided their labeled frequencies by 3 and got the first order frequencies that i needed.
you don't really think that the one, two or three channel business band handies use 15X.XXX cristals do you?
they use either 7th or 9th order crystals with the lower harmonics and fundamental frequencies filtered out.
even the old 2 channel cordless phones used 16.XXX crystals tripled to 49.XXX mhz.
this is also how the reference frequencys are derived for some cb's from the 10.240 crystal. in some cases the frequency is either doubled or tripled.
i hope this information has helped someone.
good day.

2719. HELP - Yaesu FT757GX

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-10 00:00:00 UTC
From: Dick Grindley <Dick@langwang.demon.co.uk>
Message-ID: <AcwlGQAVrdK4Ew4l@langwang.demon.co.uk>
Source record: 94559

My FT757GX has died, can anyone help ?? Everything was working OK until I put it into storage for a year while moving home. On powering up again only part of the display seemed to be working although you could tune the Rx & receive signals. Leaving it for about 30mins & everything seemed to die & display went blank. Switching the set off & on again would restore set to original fault condition but after a few days even this failed & now I'm left with a blank display & can't tune anything. I immediately suspected the Li battery but on checking it seemed OK, changed it anyway !! Checking with a scope the Local Unit, Dial Unit & Display Unit power supplies seem OK & Dial pulses are being fed to the Local Unit. What I can't find are any strobe pulses on the select lines to the top left switch bank (VFO A/B, Split, MR/VFO etc). Those digital ICs I can find tech info on seem to be OK but I've not managed to check out the CPU chips. Anyone had similar problems or suggestions what else to look at. Don't want to scrap the set if it can be fixed.

Shouldn't be any problem other than the bias - which you did -
sometimes rigs are VERY sensitive to interelectrode capacitance, and
specific brands/types of tubes are clearly specified by the
manufacturere - like the finals used in the Yaesu FT-101E. BUT in ANY
case, you SHOULD see at least SOME output - so I would suspect loss of
drive, or that you are somehow improperly setting bias - cutting
output completely - are you setting bias for 60MA per tube, or for
BOTH?

Gary - KJ6Q

Craig,
You should not have any problem with 6146W compared to S2001 by Matsushita or Toshiba. S2001 is exactly same as 6146B and it should work fine with 6146W which is Vibration resistant tube of 6146. You may have other problems.

Hi All,

I need to locate someone who can program several proms for the Motorola
MSF5000 repeater. I believe they require the R1801 suitcase unit.
Anybody who can do it at a reasonable price, please contact me by email.
I'll gladly pay shipping both ways.

Thanks in advance!

I see nothing wrong with the DJ-V5, but to be honest I don't have one yet.
I do, however, have an Alinco DJ-S11T which is my 1st ham radio and I was
so happy with it that I got Alinco's DR-605 when I had the money.
I have not had a problem with either radio and I see no reason why you
would have a problem with the DJ-V5.

Hi...I'm looking for a handheld scanner or amateur radio that has wideband reception capability, and will let me listen to 2 frequencies at once. Specifically, I want to be able to simultaneously listen to 2 frequencies in the 160 Mhz railroad band.

I have an Icom 2SRA, which can do this, but requires 2 antennas. I would prefer a radio that uses only one antenna.

Some of the radios that I think might qualify are the Yaesu FT-51, ADI AT-600, Icom W32. I'm also aware of scanners that have "dual VFO", but I don't know if you can listen to both VFO frequencies at the same time.

Any advice would be appreciated.

Hi Fellas;
This is the probably my last posting as i only have few of these left.
Please do not say you want one and not follow thru, last time there were a
few that did so!
I have for SALE:
A Bunch of 40 meter cw Qrpp transmitter circuit boards, all complete and just
require a 40 mtr xtal, power and antenna. They come with a schematic and are
new!
They are 3 transistor, 2-2n2222, 1-2n3053, have toroid output, some may differ
slightly and all require 12 vdc.
Maybe can be used as a driver? Experimental? Power out is Very low, My
wattmeter hardly moves.
Please do not ask technical questions as I am not technically oriented.
I have placed a .JPG picture of it on my site so if you have questions or
want to see it, heres the URL>>
http://member.aol.com/rlucch2098/qrpp.jpg
Some may vary slightly from this picture.
Price is $13.20 ea. ppd Priority mail.
Thanks es 73....Rich WA2RQY (1961)

The Bugcatcher is a great antenna-especially for 75/80 meters-if you can keep it clean. The coils have a habit of collecting--of all things--bugs--hence the name bug catcher. It can be also called a birdcatcher--I've splattered several birds with this massive antenna.
The taps supplied are not the best---I've switched to silver alligator clips. I mark the tap points with nail polish.
I've also used the screwdriver antennas. They work well too. I'd still rate the Bugcatcher as the better on 75/80 meters---although the screwdriver is easier to keep clean and free of corosion.
Which ever antenna system you choose---it will be work to keep it in top shape.
I must warn you that bridges, power lines and traffic lights are a major hazard for mobile operation. I was ticketed and fined for hitting a stop light and shattering the red light with my corona ball. I hit it and it shattered onto the police car that was directly behind me!

I dug out my cheezy copy of a service manual, and couldn't really see
any voltage tabs on the schematic for the vfo section. The service
manual I have is only partial I think though.Also is a copy. About the
only way I could get them is to measure off my 830. I don't have a
scanner to copy the manual. Need to get one... MK

Hello Jerry,

I would like to know which 8 pin DIN you are looking for. Is it for the CAT interface or for the antenna tuner? If it is for the CAT system the manual states that it is supplied with the FIF-232 CAT system interface. However the cable to the computer is not and you have to get it yourself. As for the FC-10 antenna tuner there is no mention of whether or not the cable is supplied. I would say it is as this is a "mini DIN plug". Now that we can assume would be about the size of a mouse DIN plug as I have heard these plugs referred to as such. Now if you don't mind my asking, if this is for the CAT system are you using the interface and if not how are you getting around using it? I would REALLY like to know. I too have one of these rigs and from what I have read the voltages are different on the radio compared to the computer. If you don't have a manual let me know and I will get mine scanned and e-mail you a copy. It's free for the asking! One more thing, do you know of a way of putting one of these rigs on six meters without using a transverter?

Thanks and '73
de Mike Hie

The best dual monitor is the Alinco DJ-580! Twice meters + 440 + extended receive to 900 mHz. Absolutely stunning device will blow your freakin mind with it's massive storage and guess what, I just happen to have one for sale. No shit. This is your lucky day my man. 350.00 and it's yours!!

check any ceramic or crystal filters that may be present in your rig. pull them out and reinstall them one at a time and check for a change in your situation while it's out. if one makes a difference, it's probably bad.
i bought a "new-in-the-box" midland 40 channel, cybernet chassis cb radio at a yard sale 3 years ago, (built in 1978).
when i turned it on, it would recieve 5 channels on either side of the channel that it was tuned to.
i traced the reciever circuit back to the 455 khz ceramic filter which had 3 connections. 2 of them were soldered into 1 hole as a factory defect.
i removed and replaced it into the proper holes and it worked fine.
considering the age of your rig, you may have had a filter go bad.
good luck.
jeff

For Sale: Motorola CP-1250 Alphanumeric Pager, with Warranty

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=197808105

For active people with too much to do and too little time, Motorola gives you a dependable and stylish big screen word message pager so you can get things done with ease. The Motorola CP1250 combines advanced "Big Screen" technology with a premium feature set. The CP1250 can display up to eight lines of text and up to 26 characters per line. It is so powerful that it can even receive and display graphics, such as logos, charts and graphs. The CP1250 supports Motorola's FLEXTM Information Services Protocol to receive and display large quantities of Information Service messages in an easy to read manner. The user-friendly Message Management features allow stored messages to be moved into one of five relevant folders, such as 'task list' and 'phone list'. The 8-line to 4-line zoom control serves to further enhance its overall ease of use.

Get a complete list of features from Motorola's Website at:
http://www.mot.com/MIMS/MSPG/Products/Alpha/CP1250/features.html

This pager is in excellent shape (10 out of 10 cosmetically) and is almost brand new. I've just been given a new phone through work and no longer need it. This pager is worth over $180! Reserve price is VERY reasonable... Please email with any questions. Good luck, and thanks for looking!

About 700 milliamps with low volume setting in RX, Maximum about 4.9
amps in transmit @ 25W output. Probably with less display lighting,
and headphone use, the RX current draw could be dropped to under 500
milliamps and be a nice QRPp contender.

2m receive diode
RIG: ICOM 706 MKII
From: N3XJX
Date: 07 Oct 1999
Time: 15:50:39

Comments
I've read about this diode going from rf from the hf antenna. How much
separation between antennas is needed to prevent this

Re: 2m receive diode
RIG: Icom 706
From: Duane - AC5AA
Date: 07 Nov 1999
Time: 12:03:41

Comments
I'm planning to use a DCI passband filter since the 706's 2m receiver is so
prone to intermod. I'm hoping this knocks enough HF stuff out to prevent the
problem. You might want to consider a high-pass or bandpass filter on the 2m
antenna, but the bandpass will eliminate the police and aircraft bands from
the RX... 73, Duane

Re: 2m receive diode
RIG: Icom 706
From: Vic / KE4QJK
Date: 21 Oct 1999
Time: 22:11:42

Comments
PLEASE, do NOT take this for gospel! I have *heard* Icom recommends a min.
of 6 feet between antennas (HF & VHF.

On the setup here there is approx. 3 feet (there is a lack of room). The 2M
receiver is still ok after 100watt SSB QSO's on HF. However, I AM going to
try to seperate the antennas to the 6' min. spacing.

Re: 2m receive diode
RIG: Icom 706
From: n3xjx
Date: 31 Oct 1999
Time: 01:24:51

Comments
Thanks I just got mine back and they said I had blown the diode. I have 4' between the 2m ant and the 6m ant

Reduced 2m sensitivity & power output
RIG: Icom 706
From: N3AWS Jim Walroth
Date: 03 Aug 1999
Time: 12:24:58

Comments
When I took my orignal model 706 to our club Field Day (never did operate it there or even hook it up--we got rained out) something happened to greatly degrade 2 meter rcvr sensitivity and power out. Still works fine on HF & 6 meters. I suspect I lost a diode or two. Does anyone have any experience with this problem or should I call Icom tech support? Thanks for any advice! 73,

Date: 09 Sep 1999
Time: 06:17:01

Comments
My 706 is doing the same after a weekend mobiling. Have you found out cause ?? I have already done fix as per VK3ALM but current problem is different. Regards Alan VK4BKM

Re: Reduced 2m sensitivity & power output
RIG: Icom 706
From: Joe Davoli, KB3DMF jdavoli@erols.com
Date: 17 Aug 1999
Time: 01:18:25

Comments
Jim, Sounds like a problem I experienced with my 706 MK 1. Whenever my rig was left in the mobile overnight, dampness would affect FM Tx. Check out this simple fix on a UK 6 meters website:http://www.uksmg.org/ic706_fix.htm

Good luck and '73 de Joe

HF output Damages 2M front End
RIG: ICOM 706 MKII
From: Bob N3DOK
Date: 16 Jul 1999
Time: 09:29:44

Comments
A friend of mine has a Icom-706. He told me that if the HF antenna is near the 2m antenna the 2m front end could get blown out. This happened to his 706. This radio was on a mobile. Since I just obtained a Icom 706MKII he wanted to warn me about this. Anyone experience this ?

Re: HF output Damages 2M front End
RIG: Icom 706
From: Keith Henderson - KT4VQ
Date: 16 Jul 1999
Time: 20:45:07

Comments
One of our local HAMs that I know worked at HRO during the ICOM 706 days and the introduction of the ICOM 706MKII. He explained that they had one fellow that went through 3 706's before they got in touch with ICOM factory. He kept loosing the frontend of the 2 meter receive.

The ICOM factory folks issued some type of warning letter or something that stated there was a minimum distance the 2 meter antenna was to be from the 6 meter and the HF antenna. I can't recall the amount of spacing but it seems to me it was about 5 foot.

The reason I recall five foot is that we discussed how stupid that was because on most cars you would have to mount an antenna on the front bumper and one on the rear bumper.

Now those comments seem to have been for the orginal 706. I am not sure if it is that big of a deal with the MKII.

Although, my HF Dipole is only 10 foot or so from my 2 meter antenna when I work the 706 in the house. I have not lost any receive ability but I have lost my output on 2 meter to just 2 watts now. I run 500-600 watts on HF. I just wonder if I may have cooked the 2 meter final someway with the HF.

Just a thought.

The URL for the list server is:

http://www.vartel.com/discussiongroups.htm

Follow the links for ICOM.

My fault...I forgot to add the asking price for the rig. I am asking $575.
AES Sells the same rig used for $700 plus.

I have an Icom IC-728 all band, all mode compact hf transceiver for sale. Rig
is in like new condition with no scratches, scuffs or blemishes of any kind.
Never been mobile. Rig has optional AM/FM board installed. Comes with power
cord, HM-12 up/down hand mic, SM-6 desk mic, full manual and all original boxes
and packing. This is GREAT buy. I'm only selling to pay off New Knwd TS-570 SG
I just purchased. If serious about buying, email me for photos of the rig.

Buyer pays shipping. Will sell only in Cont. US. You can check out my ebay
feedback as user ID rpemers@aol.com.

Thanks,

Ron

Thanks, Also sent a e-mail. Also to clarify on the problem I had ,in
case someone else has it, my tank seemed to be totally out of resonance.
Was like a dead short nearly, and pegged the plate when you applied
drive.. No output at all. So quite likely a different problem than what
he has, if he also shows no plate current. Whatever I did on mine fixed
it , but never was sure what caused it or what I did to fix it. I
thought of solder in the cap etc, but never saw any. Relay was fine...
Was weird..:/ MK

Well,,, one of the DIY welders is using rewound microwave transformers.
Cheep, at the appliance repair shop, and usually have the hivoltage
windings toasted. Also good for a kw for several minutes.

Hello, Frank.

I've had a few of these radios come in dead because the manufacturer has made provisions for the ROM to be wiped out if the RF deck is opened or the antenna is removed. I suppose that you could passively couple a GMRS antenna to extend the range, but there is almost no image rejection built in, and the radios will be stomped by every UHF signal that comes along.

Also, since the frequencies are shared with GMRS and Land Mobile (Police and Fire), the FCC is diligently pursuing violators.

The best bet is to simply get a regular GMRS license and rig, and avoid the hassle!

Or better yet, get a ham license and get lots of room to play around in!

73 and have fun!

Bill KS3Y

Are there any problems using ferrite cores for power transformers? Amidon lists a number of E cores and bobbins. Come to think of it, I put a few projects on hold cuz I couldn't find a large enough transformer for the power supply. Never thought to wind my own, even though I recall now watching my father painstakingly stack little iron pieces...

Michael.

2799. Re: IC 706 .. Antennas too close, 2 meter damage?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-11 00:00:00 UTC
From: "Gary P. Fiber" <gfiber@news.cmc.net>
Message-ID: <5rYrOCZZxLDAPZUG0rdwJ038GEma@4ax.com>
Source record: 94463

It is not a design fault of the radio but good old physics.

The problem is not so much with HF as with 6 meters. Most forget a tuned antenna generally attenuates unwanted signals. So you would think your nice 5/8 wave 2 meter antenna would reject that nasty 100 watts of 6 meter RF energy from entering the 2 meter front end and causing damage to your radio.

Well the rest of the story is a properly tuned 5/8 wave 2 meter antenna works just fine on 6 meters. I think it becomes a 1/4 wave antenna on 6 meters. Depending on how close the antennas are, coupling, quite a bit of the 6 meter RF energy will enter the 2 meter antenna and right into the radio front end. As with all electricity RF wants to find ground and does not care much how it gets there.

I was transmitting at 100 watts on 6 meters with a 1/4 wave.
The 6 meter 1/4 wave and 2 meter 5/8 wave antennas were at 3 feet separation. I measured 20 watts coming into a 5/8 wave 2 meter antenna that was terminated into a dummy load and wattmeter.
That 20 watts would be dumped right into the radio front end if connected.

I'll bet all here are not game to knowingly try transmitting 20 watts into their radios.

I do not know of ANY radio by any manufacturer in the amateur market that will withstand 20 watts of RF energy directly transmitted into it's front end.

I built a parallel tuned trap and placed it in series with the 2 meter antenna, tuned it so the 6 meter RF energy is gone. The trap has no effect on the 2 meter performance.

Why are we not warned about this possibility? As radio amateurs you and I know better as we learned about radios during our studies for the license. There are many things that the amateur operator is responsible for including general radio knowledge.

Separation between antennas is the key to follow here. Also if doing lots of 6 meter work choose a 2 meter antenna that is NOT resonant on 6 meters also.

High power HF energy is still electrical energy that can overpower a radio front end and cause damage. If you have a receiving antenna have a look at the energy it picks up when you transmit, you'll be surprised. Look at what the 2 meter antenna picks up and places right onto the radio front end when transmitting on a close by HF antenna.

How about split antennas one for receive and one for transmit like some use on 160 meters. Some top banders use a nice receiving antenna like a beverage and it is not removed when transmitting. They wack the transmitting antenna with a kilowatt and forget the receiver still has an antenna attached. The receiver antenna works nicely picking up the transmitter RF energy and feeding it right back into the receiver front end. Have seen lots of HF receiver front ends blown doing this trick.

2810. FM 2m/70cm query

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-11 00:00:00 UTC
From: Hamish Moffatt <hamish@rising.com.au>
Message-ID: <80e56qgcp3@arachne.labyrinth.net.au>
Source record: 94502

I'm looking for a 2m/70cm dual band receiver, with concurrent
receive on both bands. Specifically, I want to use one receiver
for APRS/packet, and the other for voice (in the car). Packet would
always be on VHF, but voice could be UHF or VHF.

I'd like for one receiver's audio to go to the accessories/afsk connector,
and other's to the speaker. If the TNC keys the radio, it should
transmit on the frequency of one side of the radio; if the microphone
is used, it should transmit on the other.

I don't expect to receive while tranmitting or transmit on both
at the same time or anything.

But effectively I would like to have two receivers, one with speaker/
microphone, the other going to the backpanel, and whichever keys the rig
should transmit on the appropriate frequency.

Do the 2m/70cm dual banders support this? I can't afford two
rigs/antennas for the car, and it seems unnecessary.

thanks
Hamish VK3SB

Clint,

You origial response, now conveniently snipped,
was smart ass, rude and offensive not to mention
not helpful. I was just bringing these DETAILS to
your attention. Perhaps you are unable to understand
how offensive some of your posts might seem to
others, I was just trying to help.

A number of people have reported problems with
some of the later versions of ADMS, I don't
quite understand why you feel compelled to attack
these people. If your original post had been to
the effect that you have had good luck phoning
RT and suggesting the poster try the same you never
would have heard from me. Instead you post some
smart ass comment, do you really believe that is
helpful?

In the past I have taken you to task for your gross
misrepresentations of facts as well as your lack
of civility and I reserve the right to continue.

I have no real interest in a protracted debate
with you but if you lie about what I have said
or insist upon being insulting and offensive I
see no choice but to respond.

The Mid-Island Amateur Radio CLub is located on Long Island, NY and serves amateur radio operators in Suffolk and Nassau Counties as well as parts of New York City. For information on our repeaters please check our web site at: http://www.qsl.net/mid-islandarc/index.html

Our next hamfest will be the Sunday after Thanksgiving and we are calling it Thanksgiving Fest '99. The fest will be located at the Knight's of Columbus Hall in Patchogue, Long Island for more information contact Mike-N2OX at : n2ox@aol.com

MIARC is an ARRL affiliated club and membership is open to all people, hams and non-hams alike. The yearly fee is $20 for a Full Member. $5 for a family member. (Family of a Full Member) (Family Members get all the benefits of a Full Member, but are not allowed to vote for or run for the Board of Directors, or an Office of the club.)

Our General Membership meetings will be held on the FIRST Tuesday of each calendar month. All meetings (Except VE sessions) will start promptly at 7:30 p.m. The location will be in the Brookhaven Recreation Center located at 20 Wireless Road in Centereach, NY. You do not have to be a member to join us. You do not even have to be licensed! Usually there will be a guest speaker or a nice demonstration having to do with Amateur Radio. (and doughnuts too!)

The club sponsors ARRL VE sessions. The location is same as the general meetings. The sessions will be held on the LAST TUESDAY of the month at 7 pm. For more info you can contact Mike Christopher W2IW (ARRL VE liaison for the club) at the following numbers 516-696-0984 (days) 516-736-9126 (eves)

NET: The Club Net as well as Newsline run at about 7:50 on Sunday evenings with Newsline starting at 8PM on the 449.500 repeater (PL=179.9).

Public Service: The club actively promotes Amateur Radio Public Service and encourages its members to pass health and welfare traffic. Club officials have taken an active roll in passing international health and welfare traffic to war torn nations and those suffering catastrophic natural disasters.

Again for more info, check our web site at: http://www.qsl.net/mid-islandarc/index.html or contact W2IW@aol.com

The radio should operate from 144-148 mhz TX and RX. Sounds like someone
has tried to modify it..

2823. Network analyzer questions

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-11 00:00:00 UTC
From: Michael Heins <mth@xmission.com>
Message-ID: <382AF85B.93A83A41@xmission.com>
Source record: 94515

I'm in the market for a used RF network analyzer, but could
use some pointers in selecting which model(s) to seek.

My immediate application is to tune up very high Q RF cavity
duplexers of the type used on repeaters. I want to cover
a frequency range of at least < 1MHz to > 1.3GHz. I don't
think a scalar (as opposed to vector) analyser would handle
my needs.

I'm partial to HP equipment, but even restricting myself to
HP, there are a bewildering number of models to choose from.
I know for sure that an HP8714B will work for the duplexer
application, because the vendor I buy my cavity filters from
uses that.

I'm looking for some pointers to help me sort out all the
different models. Other than frequency range, what are the
most important specifications and features to consider for
an application like mine? What models other than the HP8714B
should I consider?

If you are kind enough to reply, please also send email to
mth@xmission.com, since my access to newsgroups is irregular.

Thanks!
Michael Heins AA7XY

2824. FS: Icom IC-728 in Mint Condition.

I have an Icom IC-728 all band, all mode compact hf transceiver for sale. Rig is in like new condition with no scratches, scuffs or blemishes of any kind. Never been mobile. Rig has optional AM/FM board installed. Comes with power cord, HM-12 up/down hand mic, SM-6 desk mic, full manual and all original boxes and packing. This is GREAT buy. I'm only selling to pay off New Knwd TS-570 SG I just purchased. If serious about buying, email me for photos of the rig. Buyer pays shipping. Will sell only in Cont. US. You can check out my ebay feedback as user ID rpemers@aol.com.

Thanks,

Ron

Dick,

Please forgive me. It's just that all of the other B93RCB model Micor stations I've worked on have had a Power
Amplifier section consisting of two TUBEs.

By the way, that is a B in front of the 93, not an 8.

So you must have in your possession a new animal. One in which Motorola swapped the older TUBE type PA with a newer solid state PA. As I say, it's just that I haven't seen or heard of one of those before.

My apologies.

73,

Mark

I think you might be too sensitive to participate in Internet
newsgroups.

Someone whines, "This product sucks."

And I ask them if they have notified the author/producer of that product
of their problems with the product, and, and what the reply was.

If you find that offensive, then maybe you should skip any topics that
try to find out the facts of situations.

My first effort would be to contact RT Systems, explain the problem
you are having, and ask them if they can help or offer some guidelines
as to what you may be doing incorrectly.

Have you called them or tried to contact them before you posted your
message here ?

They may be aware of an issue to which they would respond quickly --
but they have to know that someone is experiencing a problem.

I have only one item of RT Systems software - the software I purchased
for the ICOM TC-8A - a week after the purchase of the radio. The
software has operated perfectly from the day I installed it.

But, be that as it may, the best place to go is to the people who
wrote the stuff.

Disclaimer: I do not work for, nor do I represent, RT Systems.

Source record: 94523

Hello all,
I'm having some problems with some of my RTX, I hope someone
here can help me.
First problem, Yaesu FT-707s, when switched to CW-W and CW-N mode
it doesn't seem to receive anything anymore, the speaker remain silent
while in SSB mode it gets lots of signals. This happens on any band.
The CW-N filter is missing but there're jumpers to the SSB one and they're
working, and, as far as I know, in CW-W position the SSB filter is
selected, so it shouldn't be a problem of IF filters. Anyone can give
me a hint on what to check?

Second problem: Yaesu FT-727R. The little lamp that light the LCD is broken
and was shorted for a little time, but since then the leds that lights
the keyboard aren't working anymore, they don't get the right voltage.
I don't have schematics of this RTX (and I'd appreciate if someone could
send me them, I'll pay copy & shippings), so I don't know where could
be the problem. Again, any hint is wellcome.

Thank in advance and please reply also by e-mail since I'm not able
to read this NG very often.

Careful, Ron...voices of sanity here are summarily dismissed as
antagonists of some sort...<g>

> Have you called them or tried to contact them before you posted your
> message here ?

Phone numbers for RT Systems (and ADI) are all over the place...

> I have only one item of RT Systems software - the software I purchased
> for the ICOM TC-8A - a week after the purchase of the radio. The
> software has operated perfectly from the day I installed it.

The vast majority of RT Systems software owners are pleased with the
software's capabilities. There HAVE been glitches over the years, but I
have seen RT Systems respond in OUR best interests...quickly and fairly.

> But, be that as it may, the best place to go is to the people who
> wrote the stuff.

Really? Wouldn't whining and complaining about it in public newsgroups
be the better path to take?

<g>

> Disclaimer: I do not work for, nor do I represent, RT Systems.

All I "represent" is that the software I have licensed from RT Systems
is well-supported, and the current versions I use for various HTs works
perfectly.

jeff,
Just some clarification in practice / terminology. A crystal can oscillate at it's fundamental frequency or at overtone frequencies. The overtones are very close to multiples of the fundamental frequency. A properly designed oscillator only oscillates at one frequency. The particular one which the crystal oscillates at is determined by the oscillator circuitry. The overtone frequencies are close to, but not exactly multiples of the fundamental frequency due to what, for simplification, may be called stray reactance. The concept is just like a quarter wave of coax being resonant at three time the frequency because a 3/4 wave will also be resonant. Filters which use transmission line resonators have similar "overtone" responses and can have little attenuation to transmitter harmonics if not done carefully.
Crystals can be manufactured a little differently so that they work a little better at their overtone mode than if they were to be manufatcured for fundamental operation, but usually any crystal can operate in any of the modes (1,3x,5x,7x,9x, etc.). The overtone mode frequency, however, is NOT an exact multiple of the fundamental mode frequency. If I recall correctly , a common fundamental crystal has a third overtone which it something like 300 ppm (parts per million) lower that 3 times the fundamental mode frequency. This would be a third overtone frequency equal to the fundamental times 2.991. When this is done, of course, the crystal is ground to oscillate at the overtone frequency which is desired and it is marked as such.

I have, many times, used crystals made for fundamental operation at one of their overtones. I could hunt for either type of crystal whenever I needed to put together a prototype quickly. I had access to many crystals, both fundamental and overtone, and this gave me more freedom to very quickly get a needed frequency if the proper crystal was not available (but one was close enough when operated in an overtone mode). I have used fundamental crystals in the overtone mode and overtone crystals in the fundamental mode.

Because overtone crystals have been either unavailable or more expensive than fundamental crystals, it is common practice to use a

fundamental crystal oscillating at its fundamental frequency and then use
a harmonic of that frequency for the intended purpose.

This is commonly done using two methods.
A frequency multiplier (usually a doubler or trippler) is put after
the oscillator, or several are cascaded, until the desired frequency as
achieved. Anything which causes the signal to deviate from a pure
sinewave causes harmonics to be generated. These are nothing more than
amplifiers driven rather hard to get into cutoff and saturation and
therefore deviate from the sinewave and generate larger amounts of
harmonic energy at their output - which has a tuned circuit at the needed
harmonic. (yes, I know there are other effects, but this is ok for this
discussion)
Because the oscillator is running at the limit of the active device,
and therefore into some non-linearity, there is often sufficient second or
third harmonic available at the oscillator output which could be used
directly or as the input to a frequency multiplier. We are all familiar
with the crystal calibrator which has at its output, harmonics out the
wa-zoo. At ten meters, you are listening to the 280 th harmonic.
I have even used small crystal oscillators at 12 MHz, and nothing more,
for signal sources (small, low power transmitters) in the 2 meter ham
band. Harmonics are EXACT multiples (1x, 2x, 3x, etc.) of the fundamental
frequency.

So, when we use the word "overtone" we are saying that the crystal is
actualy oscillating at the higher, overtone frequency of that crystal -
which is not an exact multiple of the fundamental mode frequency. Here
we use the words "fundamental mode" to describe the "1x" frequency - and
the word "overtone" to refer to the (NOT exactly true) "multiples".
When we say "multiplied, doubled, tripled", etc., OR use the word
"harmonic", we are saying that one frequency is generated and we are using
a multiplier (times 1, 2, etc.) to get the harmonic. This *IS* exactly a
multiple of the fundamental frequency. Here we only use the word
"fundamental" to refer to the "1x" frequency - and the word "harmonic" to
refer to the (now true) multiples.

> they use either 7th or 9th order crystals with the lower harmonics and
> fundamental frequencies filtered out.

The proper terminology is "7th or 9th overtone crystals". This
means that the oscillator is oscillating at these overtones with nothing
happening at the fundamental or other overtone frequencies, so they are
not "filtered out".

> even the old 2 channel cordless phones used 16.XXX crystals tripled to 49.XXX
> mhz.

This wording "tripled" implies that the oscillator is oscillating at
the fundamental of the 16.xxx crystal and that there is a tripler stage
being used - and could certainly be true - or the third harmonic is
selected.

> this is also how the reference frequenc[ies] are derived for some cb's
from the
> 10.240 crystal. in some cases the frequency is either doubled or tripled...
> jeff

The term "reference frequency" is used for the rather low frequency
(usually 10 KHz) used at the phase dectector of the phase locked loop
synthesizer. By using a 10.245 MHz crystal, a string of ten frequency
dividers (all being divide by 2) gets you down to the 10kHz. needed at
the phase detector.
The 10.24 MHz. frequency can also be used in other places in the
radio giving you two for the price of one. It can even be multiplied for
higher frequencies.
If the first IF is made to be 10.7 MHz and the second IF is made 460
KHz. the 10.24 oscillator can be the second local oscillator as well.
It could be doubled to 20.48 and used as a local oscillator to mix
the VCO frequency down to a lower frequency so that the programable
dividers in the synthesizer do not need to be as large or operate at as
high a frequency.

Source record: 94531

I have not had any problems with my 706MKII. I have 2 duplexers, taking 6 out of HF and combining with 2m after 2m 160 watt amp into a 5/8 wave 2m antenna, on a mag mount, located about 6 feet from another mag mount 2m/440 antenna on an FT-90R. My HF antenna is SGC-303 whip and coupler about 5 feet from the 5/8 wave antenna using 1/2 kw amplifier. I have been using this set up for a long time with no problems. I do get some interference on the dual band rig from the 706 on 6m and on the 706 6m from 2m on the dual band rig, depending on freq and power level, but I try to make it a point to only have one on at a time if on the same band! If I am on the 706 on 2m the other radio is off. I do not experience much of a problem using the dual band rig on 2m when the 706 is on 6m and no problem on HF when using the 90R on either band. The farther apart you put the antennas the better you will be. I have a Suburban and the vhf/uhf antenns are mounted above the dome lights. The HF on left rear glass in a QMS. No science envolved. That's where I wanted them and they work good. Besides, if you are only using the 706, you can only use one band at a time (or radio) but I am not sure if the 2 meter side is OFF when you are on HF or 6. Rudy, K8SWD

Hi everyone. Just wanted to let you know that a new forum has been
created for users of the Kenwood TM-V7 radio.

The TM-V7 ONElist community is a place for ham radio operators to
discuss operating tips and tricks, and other experiences they've had
operating the Kenwood TM-V7 (A or E) dual-band amateur radio, and/or the
software used to program the radio.
Additionally, it may become a place to post frequency load files for the
TM-V7.

You can join this community by going to the following web page:

http://www.onelist.com/subscribe/TM-V7

Or you can join by sending email to the following address:

mailto:TM-V7-subscribe@onelist.com

Mark is correct. I was thinking 83, not the 1/4-KW 93. Sorry.

73, Dick

Bet you got a loose connection somewhere. I would think your "SG" switch is on, otherwise you would not get the 60 mil idle current. Check and make sure the driver tube hasn't been bumped on it's socket, and is loose. My 830 has a problem with this. I think the soldier connection on the driver board to the socket pin is getting flaky. I have to wiggle the driver tube every once in a while. Need to fix that, but it's a real pain to pull that board up, with all the wiring so I let it go. Also make sure the band switch is not loose, or has a loose coupling. If they get out of alignment, that can happen. Also one time, I lost all output. Period. I had to tear apart the whole tank section, and never did find a problem with any parts. I got down to the last part. The variable loading cap, and the cap for the negative feedback line. I pulled the cap, and checked, no problems visable, and then changed the feedthru cap. I never found any problems with any parts, but when I put the dang thing back together it worked! Never could think of what the problem was, unless a bad ground for the load cap, which I doubt, or a bad cap for the neg feedback...????Was the goofiest thing I'd seen in a while. Anyway, if no output at all, I'd look for anything loose. If the neutralization was off, you would still have output, just the max output would not jive with min plate current. I've heard problems with certain 6146's in kenwoods, so if the old ones work, and the new ones won't, something may be wrong with em. But on the other hand, I've heard of people running "W"'s in 830's with no problems. I use "B"'s in mine. MK

To answer one of your gripes about the driver socket. It is easy to
resolder. You don't lift the RF unit. There is a trap door under the AF
unit that gives access to the bottom of the RF unit.. Solder away before
the intermittent causes the resistors to burn the board. If that happens
it is a pain to fix...

Ya need good old iron for low frequency.
Ferrite is only good for high frequencies.
I'm sure others can suggest the minimum
frequency for ferrite, but is's not 60Hz.

The grease in the VFO needs to be changed. Seriously though the
lubricating grease in the variable cap in the VFO has dried out and
needs to be flushed out (I use contact cleaner) and then re-lubed. I use
a control cleaner with silicone.

In the pursuit of a HT, I'm looking at some of the Alinco models, specifically the DJ-V5TH and DJ-G5TH. Was wondering if anyone had any experiences with these models, or with Alinco in general.

The only thing I don't like is the fact that they cannot be programmed via the PC, but with all the other features they have for the price I think I could live without it.

Thanks,

Robert

All you Kenwood TS-180 owners take note. Just don't ask me to install
it..

I have nothing to do with the owner just passing along the info as I
have had several people ask me for these kits.

2869. how to use psk31 xmit interface w/ft920?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-12 00:00:00 UTC
From: law <law@nh.ultranet.com>
Message-ID: <382C7B10.ED4834BC@nh.ultranet.com>
Source record: 94405
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I'm trying to setup my pc soundcard(sblive) with the psk31 xmit
interface
described in the May 99 issue of QST. Was wondering if anyone had
built this simple circuit and how they connected it to the ft920 with
the
simplest / most straightforward conncection.

Any response would be appreciated.

Hi all,

I am looking for a Motorola Minitor II pager, UHF band with carrier squelch to be used to monitor one or two channels. I don't need tones, etc. as I'll only use it to monitor and not receive pages. Please reply to pentiumchris@rocketmail.com

Thanks

Chris

Alinco backs their products well, in my own experience. And these two
are great HTs, no doubt.

But you sounded like you would like computer programmability. Have you
looked at the ADI AT-600HP HT? It's available for about $240 - same as
the V5TH...and forty bucks less than the G5TH.

I enjoy my Yaesu MH-34xx speaker-mike. It isn't a "mini-tinny," nor is it a handful. It's a good-performing mid-sized unit.

And - BLESS YAESU - the same speaker-mikes can be used on all the Yaesu HTs I own - from the Vertex FRS and commercial VX-10 to my Yaesu FT-50 HTs.

You have discovered the one chronic problem with the TS-820S. I have yet to see a rig without the flaky display. I have worked on a few and have occasionally managed to fix them.

The problem is on the circuit boards inside the display unit can. The connectors get oxidized, and the vias through the boards get intermittent. It's a lot of work to fix and you are never sure if you have done it, but check out the Kenwood service bulletin on the subject.

Assuming you are most often tuning for S21 or loss,
have you considered a simpler system ?
An HP sweeper, a dual directional coupler, and detector
to any O'scope would do it far cheaper. You could even
take this setup upto 18 GHz for less than the analyzer.

2902. DG-5 display acting up on 520SE

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-12 00:00:00 UTC
From: David Snyder Hale <david@isi9.mtwilson.edu>
Message-ID: <80g1qt$8pg$1@agate.berkeley.edu>
Source record: 94472

I have a Kenwood TS-520SE with a DG-5 digital display attached.

It has started acting up -- the most significant digit (far left) is oscillating by +1 to +3. What that means is that, for example, when set to the 1.8 MHz band, instead of reading 1.8000 it reads 11.8000 then 31.8000 and so on, flipping back and forth. In a band where that top digit is used, eg. 10m band, it is additive, so that it reads 28.0000 then 38.0000 then 48.0000, then 28.0000, and so on.

Has anyone seen this before? Any ideas of what it could be? I don't even know whether it could be in the radio or the display unit.

Thanks,
--

Don't know about the vol. control, but I'd bet the original poster was referring to the clear sounding receive audio that this model is known for. I still have one (on a remote base now) & it has plenty of volume on receive, something that many newer radios with their potato chip speakers just don't have.

I have for sale an as new, top of the line Radio Shack DX-398 shortwave receiver. The DX-398 is a world class receiver with features which are normally found only on much more expensive equipment.This thing was bought new in April of this year. You cannot tell it from a new one (except a new one does not have any batteries, and this one does...hi hi) This receiver has far too many features to list all of them, but if you are interested you can go to the Radio Shack web site and learn more about the rig. I have the original receipt, the box, owners manual, and even an extremely nice leather carrying case. This radio sells for $249.99 in the catalog. I have traded for the rig, and I really don't have any need for it. I will sell the rig for $175.00 shipped to lower 48. You will not find a nicer DX-398 anywhere. Thanks
Tom

From: David Snyder Hale <david@isi9.mtwilson.edu>
Message-ID: <80h27rctd1@agate.berkeley.edu>
Source record: 94484

Has anyone performed the alignment described in the operator's manual for a Kenwood TS-520SE? I don't quite understand the section on aligning the Heterodyne Crystal Oscillator, Section 6.3, page 34/35.

It says to adjust the coil first until you hear the crystal stop oscillating. I don't understand how I can hear this; perhaps I should be listening for something else that it doesn't describe well.

I'm guessing that one should put it into TUNE mode and turn the calibrator on, but it doesn't say to do this. In fact, the previous paragraph says to turn the calibrator off. But one certainly can't hear the ~MHz xtal oscillators.

Thanks for any info. Any other general alignment advice is appreciated, too. 73,

p.s. FYI, in case you are wondering, "then why are you doing this?" the xcvr is old (obviously) and has been shipped around a bit, and not used for a number of years. I just wanted to give it the once-over by doing the "simple" alignments in the regular (not the maint) manual.

From: David Snyder Hale <david@isi9.mtwilson.edu>
Message-ID: <80h2k9ctd2@agate.berkeley.edu>
Source record: 94485

hi,

So, I appologize that I don't know this (yet), but could someone explain the purpose of SSB and CW filters in transceivers? What exactly is being filtered? Are you just limiting the BW of transmission to keep from spilling into adjacent frequencies?

My rig has a SSB xtal filter in it, and a space for a CW filter. Do I want and/or need the CW filter? If so, why or why not?

Thanks for your indulgance.

73,

Source record: 94487

They are for receiving, narrows the bandwidth or passband, helps in reducing adjacent frequency strong signals (QRM). SSB filters typically range from 2.4-1.8 khz and cw 500-250hz, with the smaller of the range being the tightest.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-12 00:00:00 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <382C1B59.91AC43B1@dialpoint.net>
Source record: 94488

You can think of the filters as a window. They limit the bandwidth of
the incomming signal. They are also used in the transmitter section, but
you do not need to get into that. The wider the filter the more signals
can get into the receiver. You will see some ssb filters listed as 2.1
KC an others listed as maybe 1.8 KC. It takes about 2 kc for the voice
to sound natural, but in order to hear the signals under crowded band
conditions some hams are willing to give up the natural sound to be able
to hear the signal without hearing the other signals that are very close
in frequency.

You do not need a cw filter but you might want one if you work a lot of
cw. If you tune in a cw signal withthe ssb filter you will hear a lot
of signlas if the band is crowded. When the cw filter is switched in
some of the signals will dissapear from the audio comming out of the
speakers.
You do not need the cw filter to transmitt cw either.

I had the same battery drain problem with my FT-50. Also, I had
complained about the radio being too easy to turn on and had a
problem with the channel selector knob sometimes not changing the
channel - it seemed to slip.

I sent the radio in for all three fixes. When I got it back, it
still had the original power switch button and the channel selector
knob still skips. But, they did fix the battery drain problem. I
had to complain again about the power switch and they did send me
the newer lower profile button which I installed.

I believe I was just the victim of a glitch as the guy I talked
to via e-mail (who was to have handled the repair but just happened
to be out of town when the radio went to him) was very helpful and
seemed concerned about getting the radio fixed.

Add a CTCSS tone board from someone like Communications Specialists. The encode only board (SS-32 or SS-64) runs about $30. These are, however, single tone, DIP switch selectable, units. If you find you need many, then you ought to consider the outboard 64 tone rotary switch selectable unit.

I do not know the construction of the IC-25A --- but, I have an old IC-22A
and I added a Communications Specialists encode board in it.
The xtal selection ("channel" - yeech!) switch was identical to the
switch found in the then prevelant 23 channel CB (again - yeech!) radios.
What I did was scrounge a wafer off of the switch in an ol' CB junker
and add it to the 2 wafers already in the IC-22A. (I think I had to
use somewhat shorter spacing ferrules on the assy screws of the switch.)
Then I used steering diodes at selected switch positions to select the
appropriate ctcss/pl tone as needed. Serendipitously, at switch
positions where no tone is needed and where no steering diodes are
employed, the tone 'selected' is the lowest tone that could be
selected and it seems to be a non-issue.
The instruction/information sheet that comes with the tone encoder
clearly shows how to use steering diodes to accomplish tone
selection.

Hi,
I have for sale a very good condition Yaesu FC-757AT automatic
antenna tuner. Matches Yaesu FT-757GX and FT-757GXII in appearance
(as well as FT-767 etc) but I have the cable to use this tuner with
any HF transceiver.

Tuner tunes 160 thru 10 meters, fully automatic, handles 150 watts,
has built in dummy load and VSWR/watt meter, and two position coaxial
switch to auto-switch between two antennas too. Simple to use --
just turn powre on, press the tune button, and transmit with 10 watts.
Tuner does the rest. Simple hookup-- power, coax in, and coax out.
That's it. Includes owners manual book too.

Price is $200 + shipping

Joe

2935. FS: Ameritron AL-80 amp...single 3-500Z. $475 + split shipping

Hi,
I have a very good condition Ameritron AL-80 amplifier. Covers 160-15
meters but also have the info for the 10 meter mod included. This is
the
original AL-80 (not A or B). Uses single 3-500Z output tube.
Provides 600-700 watts PEP output. Wired for 120 VAC. All in
excellent working condition. With original Ameritron owners manual
too.

Price is $475 + we split shipping 50/50.

thanks,
Joe K7JOE

Actually, it's funny that you call yourself ICM.
One of the biggest statiosn outside the "bowl" gamers in the local mixed up world of Ancint Mary C.B.er's up/down/way over here is "ICM 2000" and is good friend with the good doctor that makes the house warmers.
When I first joined on and saw the name, I figured you might be him.
Oh yeah.. the good doctor that built the 20kw is rumoured to be working on a 50kw that he is naming "Spike." He calls his 10kw-er's "Clam Bakers." If I ever meet him I plan to ask him why.

From: hansen@fredonia.edu
Message-ID: <80kekg$uv4$1@nnrp1.deja.com>
Source record: 94308

I want to thank everyone for the helpful advice here... especially Lee's extensive posting from the 706 listserve. Based on what I've heard my current plan is to mount the 2 meter antenna toward the front of the care and to mount the HF antenna on the rear bumper. In addition, I had no plans to operate 6 meters, so that should reduce my vulnerability.

Thanks again to everyone,

John W2FS

I would like to thank all who helped me with this problem. I changed the regulator ic and the pass transistors and still had the problem. What the defect turned out to be was the wire wound resistors between the emitters of the pass transistors and the output post of the power supply. The resistors should be about 1/10 ohm. but measured close to 1500 on my meter. I think they had a broken or burned wire in them. to get 14 volts on the output the regulator was pushing the pass transistors to 22 volts or more. I had high voltage on the transistor side of the resistor and 12 on the output side. when I put on a load the pass transistors were unable to supply anymore. I have seen this problem discussed in other groups and I hope this is of use to others

I have a Yaesu FT101ZD that is perfect in every way but one. The audio from the unit is very low. I can turn the volume all the way up and it is loud enough as long as there is no other noise in the house. It has been this way for years, maybe since new.
All frequencies and bands work great, it transmits great, it recieves signals great even low ones, it's audio volume is just low.
I would like any suggestions anyone has. I have an Tek 454A scope, freq counter, audio and rf signal generator, just about anything you would need to solve the problem but need some starting points. I have not ever even taken the cover off this unit.
I would like to buy a service manual or copy of one if anyone has one for sale.
Please respond to blueglow@mindspring.com.

Thanks,
Mark

First make sure there is a problem. Maybe the speaker is bad; is the volume low on headphones too? Check the external speaker jack; it may be a closed circuit unit that isn't making good contact.

If that all checks out, measure the audio at the volume control. If you see around one Volt peak to peak, the problem is in the audio amplifier. If this unit has squelch, it may be closed. That would only be if the radio has FM capability.

If you see much less than a Volt at the volume control, the problem is in the detector circuitry.

That's as far as we can go without you making some tests.

Yes, I was at their VLF site north of Seattle about 15 years ago. The antenna reaches from one mountain peak to another, and has a center feed point. It also has many miles of copper wire radiating from the feed point just underground. Quite impressive!

Don't forget the vlf antenna system that lies beneath most of northern Wisconsin. As I understand it, this system operated around 30 khz or and required 20-30 minutes to send a message. However, it could reach nuclear submarines deep beneath the ocean's surface anywhere in the world.

Hi Gary;

I have a MINT FT-990AT, with the 2.0 SSB filter, & 500hz CW
filter, hand mic. It is a late serial number, and the latest firmware
that Yaesu used for the radio. I also have a matching SP-6, with the
Timewave DSP59-Y that really makes this radio sing!! You can take out
QRM that is right on top of you!!. I am asking $1400.00 for it.

Corky - Several in use and experimental very long antenna have been used. For sub work the VLF [15 to 18 KHz or so] very high power transmitters were very slow speed FSK. The west coast station was at Jim Creek in the Cascade Mountains about 85 miles north and east of Seattle, WA. There were several other stations around the world. Power out was up to 1,000,000 watts.

Most of the LORAN C [100 Khz] have some very large antennas. But the Omega and other navigation systems of the late 50's and 60s which operated at 20 or so Khz were bigger.

One of the more interesting long and high antenna was several miles of wire laid onto of the ice in the Anorthic. The ice was miles deep and being an insulator the wire was above ground by that amount. Was used for basic research at even lower VLF frequencies.

Corky,

The station that RHUNT mentioned is called Jim Creek near Arlington Washington. It is run by the NAVY and operates around 18 KHz. The power is in the megawatt range. There are stories of fillings resonating, car door handles warm to the touch, bed springs keeping folks awake at night. On a clear night, you can see the illuminated towers that support their very long antenna off in the distance from the Interstate between Seattle and Vancouver BC. Communications is digital like encrypted teletype. A similar station exists somewhere on the east coast.

Hi Guys,

I have two original manuals in *perfect* condition for the 75S3b/c series receiver. One is the 70's edition, the other is the 60's edition. $60 plus USPS shipping for both. Also, *original metal* S line trim ring, replace that plastic jobby! Excellent condition, stripped to bare metal includes expensive SSN custom primer and trim colored paint (both new). $60 plus ship.

Source record: 94437

I just received another IC-746 as replacement for the one I recently bought and had a minor problem with - and NOW, have ANOTHER minor problem with the newest one!

The latest 746 needs almost full open mic gain setting to obtain normal drive - and trust me, it's NOT the microphone! I am VERY reluctant to go thru the delay and expense of returning yet ANOTHER 746, and am wondering if any resident techs here might point me to an internal adjustment to comphensate for the low output front panel gain control. I have found a couple I *suspect* might do it, but prefer some educated assistance. Please respond by Email so I don't miss any help offered - and thanks!

Go to RT Electronics in Alabama and ask. They are the ones who make the commercial software sold through the chains. To find their number, you can check www.yaesu.com site, and then look for the retailers. You will find their number included.

Date: 1999-11-14 00:00:00 UTC
From: Murray Kelly <mkelly@powerup.com.au>
Message-ID: <382E19BB.3D28@powerup.com.au>
Source record: 94341

My 820 had this, too, 20 years ago. The dealer's tech. advised
to clean the 'vias' as Bob calls them. He also said one could
get a better contact between them and the board contacts by
carefully winding the vias thru 45 degrees at their base. This
way the edges bite better into the board contacts, more like a
wire wrap, I suppose. I never had any more problems with flicker
and false numbers after this, anyway.

Bob wrote:

3003. FS - BC-221-M

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-14 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19991113220127.25675.00000149@ngol06.aol.com>
Source record: 94342

Hello Folks,

I have for sale a BC-221-M, serial number 379. This unit uses 6K8, 6SJ7-Y, and 6SJ7 tubes. The metal case has been repainted a gray-green, (looks like a nice repaint job) but the internal front panel is the original black. Has the calibration book, but the nameplate is missing, so there is no way to tell for sure. Zeroes on all check points except those at the extremes of the ranges. Crystal still zeroes with WWV. Works very well.

This unit has the following modifications:

1) The original output connector was replaced by a red plastic 5 way binding post (takes banana plug, phone-tip, spade lug, bare wire, or alligator clip). Easily replaced with output connector of your choice. (The original was gone when I got this unit).

2) Power on-off switch was removed and wires sleeved together. Will include a matching DPST toggle switch, if you want to return it to original condition. (The original switch was gone when I got this unit).

3) A homebrew, filtered, regulated, transformer operated power supply with for 120 VAC is installed in the battery compartment in the base of the unit. The power supply is mounted on the hinged rear door of the battery compartment for easy access. It uses a 6X4 rectifier and 0C3 regulator tube, and is fused, but there is no power switch. I installed this supply several years ago, to eliminate the need for dragging around an external one. Runs cool, even after many hours. Can be easily removed if you don't like it.

A complete set of tested spare tubes is included.

I'm asking $50 plus shipping from 19087. I've had it so long I'm not sure when I got it - more than 20 years ago, for sure. I have used it for testing and calibrating many homebrew rigs over the years, and also tried it out in the FMT with a BC-348, back when the FMT was still being done. (Did pretty well, too - average error under 60 ppm).

My reasons for selling are two: First, a few years ago I got a really nice LM-20, which is smaller and can do both modulated and unmodulated output. (no, the LM is not for sale!) Also have several junker LMs to keep it going for a long time. Second, I have moved to a house with less room for radio stuff, and I have to reduce "basement boatanchor inventory" as much as possible.

Please save this classic from eBay!

yet.
> You can however clone two radios w/ the cable.....

Well, wound up purchasing the Alinco DJ-V5T today. It's price was
reasonable, and it covered the whole 420-450 TX range, unlike most of the
other handhelds. In addition it also does the 2Meter, and has a nice built
in scanner. Cute little unit.

Also took the advice of many (thanks everyone) and picked up the vehicle
power adapter (which I can also use inside with my 12v power supply),
external speaker mic, and an antenna for use on the vehicle.

I also verified that it IS computer programmable. I got mine from RT Systems
out of Huntsville (very pleasant to deal with), and the fellow said the
software should be out in about two to three weeks.

Who knows, maybe by then I'll finally have my call sign! <SIGH>

I have one of the models before yours the HTX-212 and it has always
worked good and still is today, always get good audio reports ect.
The only thing I don't like about it , is how hot it gets even on low
power, but I guess the heatsink must be doing it's job as it has never
quit working yet.
Your new one looks just like it other than mine has a green display
and yours amber, wonder what else is different?

3013. Cantenna with PCB oil?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-14 00:00:00 UTC
From: Ken Harrison <respond.via@newsgroup.com>
Message-ID: <382E899B.D9DBF9C1@newsgroup.com>
Source record: 94352

I have a Heathkit cantenna dummy load I picked up for a couple bucks. I was told the oil it has in it is a PCB type oil. I'd rather not have that around the house so I'd like to switch it out to mineral oil. What sort of precautions should I take in dealing with a change such as this? Is it safe to pour the oil into another container (and take it to a hazardous disposal day) and rinse the dummy load out with a solvent? I'd like to make it work out but realize my health is more important that a couple of bucks. :-) How about it? Can it be done safely enough?

Please respond via the newsgroup.

Thanks and 73-

While PCB-based oils are a bit nasty, unless the can is leaking, just
leave it alone.
Even the power companies leave PCB-filled transformers in service-of
course, if they fail, they replace them with transformers with no PCB in
them.
Just use the Cantenna-the stuff can't hurt you sitting in a closed can!
BTW, it's almost impossible to remove ALL PCB's off a surface!
As for using solvents-the ones that MAY work are pretty nasty themselves.

Would appreciate any help or suggestions, dealing with an ill IC730 transceiver:

1. "Preamp" switch must be on or I hear hardly any signals.
2. If I decrease the RF gain, and then turn it back up, all the way, there is a second or two delay before the actual gain comes back up.

I have been told that there was a problem with the T/R relay in this rig, that tended cause problems with the preamp circuit. Anyone know why they tended to fail? Is a replacement 12V relay that will match the PC board easy to find?

tnx,
N1AEP

For Auction: Old Radio Station Carts

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=199704206

Description

Old Carts for Sale. 4 years ago, we "went digital" and have had these Mono Carts in Boxes. There's about 150 of them. They need cleaning up. Still have the old labels stuck on the end of them. Some of them may be a little muffled sounding. Various lengths from 10 seconds to 10.5 minutes. 3 boxes of them. $15 shipping will be added on to final bid. Will ship immediately upon check clearing the bank. (Unless you send money order or cashier's check.)

If your are looking for a inexpensive repeater controller this is for
you.
The RM-10 Repeater maker includes
Courtesy Beep
Auxiliary Relay
Adjustable Hang-Timer
Remote Repeat Inhibit.
Compact Case
Adjustable Time-Out Timer
Power, COS and Push to talk L.E.Ds.
Connections For CTCSS Decoder/Encoder (CSI TS-32P included)
Repeat Inhibit Front Panel Switch
Inputs for Full or Half Duplex Telephone Interconnect
Note: This is not an Auto-patch. It is only a Push to Talk output for
an external Patch.

This controller is like new. I don't think it has ever been used. I
was going to use it on a repeater I am putting together but decided to
use something else.
Asking $75.00
Please contact me by E-Mail if you are interested or have any questions.

I have for sale a CLEGG FM-DX 35 watt 2 meter mobile rig for sale........This rig is in excellent condition and puts out 35 watts on high and 500 mw on low........It is fully synthesized and covers 143.5 to 148.5 MHz in 5KHz steps...........I also have the matching CLEGG power supply model 031A its a 10 amp with built-in speaker also in excellent condition......The manual for the FM-DX is in Mint condition and also have the mobile bracket.......This is collector quality from the mid 70'sI will take $150 for the package plus shipping.......I can be reached at (508) 821-2993 or e-mail WZ1U Steve / Lakeville, Ma.

3031. WTT: Icom IC-730 for IC-740

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-14 00:00:00 UTC
From: W4UDX <W4UDX@juno.com>
Message-ID: <382EE8B6.FEFD0152@juno.com>
Source record: 94370

Want to Trade:
Icom IC-730 mobile HF for Icom IC-740 Base HF radio.

IC-730 HF mobile is in super near-mint condition with original
pre-amplified hand mike and owners manuals,
power cable and original box. It works beautifully with 100 watts + out
on all bands. Includes WARC bands. It is
basically the mobile version of the IC-740 radio and even looks very
similar only smaller. I got it with the intention
of trying HF mobile, but my old little Honda Civic is just too small for
such a feat.

Would like to trade for the Icom IC-740. Must be working properly and
in at least good condition (cabinet
scratches OK, but no front panel scratches or missing lettering or
un-original knobs). It need not have the internal
power supply. Must include mike, manual and power cord or I can keep
mine.

E-mail W4UDX@juno.com Thanks.......Mark

The radio only meets the published specifications with the preamp
enabled. When the preamp is off the receive sensitivity specification
is undetermined & undefined.

Maybe you have the receiver set to slow agc ? I owned one for over 10
years but sold it sometime ago. I seemed to me a bit of lag behind
the RF control was normal.

>I have been told that there was a problem with the T/R relay in this

>why they tended to fail? Is a replacement 12V relay that will match the
>PC board easy to find?

The preamp relay is the most likely culprit. It is located on the RF
unit. Generally you will need to change out that relay. There is a
technicians modification where you feed some DC through the relay
contact in am attempt to have the relay self clean itself during
operation. You use some 10K resistors and must cut a trace and
replace it with a small cap to block the DC from going into the rest
of the RF unit.

The T/R relay is SR202, if in trouble will show up when you release
the PTT, the receive is way down and find if you click the PTT one
more time the receive comes back

The mic that came with my IC-281H went bad on me. Didn't want to have to fight with ICOM to get it repaired.

Took a data cable from a Motorola mobile cellular radio and put a GE chassis connector on the other end. Then used a regular General Electric Master II hand mic. Had to add a series resistor to drop down the audio level. The GE mic had too much gain for the radio. Have been using this now for several years. Everyone says the audio sounds great.

It would serve you better to go find a larger output current power supply. If you insist on reducing the output power on the IC-281H, it can be done.

Open up the top cover. In the back center, there is a variable resistor R62. It is located to the left of the three cans, L16, L17, and L19. This is the power output adjustment. Use a watt meter and lower the high output setting to what you want. In other words, put the radio into the high power selection, and adjust R62 for the lower power you want.

I would think that a higher gain antenna would work better. Just run the radio in a low power setting.

Have had one for some time and find it very good with respect to intermod. Thank goodness no wide band coverage and you buy a scanner if you want that. Works all the time with no quirks. Two VFO's is cute but for what? I'm not sure. Chincy looking mic but audio is good. Minimum features compared to an Icom IC 2100 but a nice rig all things considered. They're going for about $125 or less, used and worth it but I'd go just a little more and get the IC 2100 which has many more features.

To my knowledge there has not been any Motorola published chart on Maxtrac model numbers. It gets a little confusing, and I still am not complete on the information I have. Most of the radios use a 12 digit model number. Follows the info I have. If anyone can add to it, please let me know. Hope this is of some help.

Jim

MAXTRAC Motorola Radio Model numbers

1st digit :
D = dash mount T = trunk mount
note : these radios can have dash mount with remote trunk cables

2nd digit : power output

0 = 2 watts, 3 = 25 watts, 4 = 40 - 50 watts, 5 = 60 watts

800 radios : 0 = 2 watts, 3 = 15 watts, 4 = 35 watts

3rd digit : frequency range

1 = 29.7 - 50, 3 = 146 - 174, 4 = 449 - 470, 5 = 806 - 870

4th digit : unknown

5th digit : type of radio

J = conventional, Q = trunked, conventional, W = trunked, smartnet

7th digit : unknown

8th digit : unknown

9th and 10th digit in trunked : channels and type of trunking

B1 = 2 freq., type I trunking

B3 = 2 freq., type I trunking

B4 = 2 freq., type I trunking

B5 = 2 freq., type I trunking

B6 = 16/32 freq., type I trunking

B7 = 16/32 freq., type I trunking

C3 = 16 freq., type II trunking, smartnet

C5 = 16 freq., type II trunking, smart net

C6 = 16 freq., type II trunking, smartnet

Richard Williams wrote:

> I'm thinking of buying a TS-570 to use as a QRP rig. Will the autotuner work
> at the 5 watt level? Thanks.
>
> Rick, VE9HF

Hi Rick -- My Kenwood TS-850SAT will autotune with min RF Pwr setting (6 Watts).
So assume the 570 wud also. Worked 109 countries QRP this way -- antenna is not
a TH11DX, but merely an R-7000 vertical, so QRP is achievable -- need
propagation though.
2/3 of contacts were SSB, 1/3 CW.

Have fun
I also QRO - you betcha when anbd if the P5 comes on -- hi hi.

Hopefully, I'm in the right area...If not, maybe I'll be re-directed to the proper place....I have a Heathkit HW-2036 2mtr, but I don't have the service/assembly manual and the radio doesn't transmit due to sync lock errors...I'm guessing it to be an alignment problem, but without the manual, I can't be sure....Can someone please help that may know how I can correct this? Is there a source for the manuals? Any help would be deeply appreciated!

3055. Help w/Kenwood TS450S

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-15 00:00:00 UTC
From: "Gary O. Lyons" <drgary@amaonline.com>
Message-ID: <Qq3Y3.691$9F4.4444@newsfeed.slurp.net>
Source record: 94144

My TS450S operates just fine on SSB. However, it does not transmit on CW. The VOX works correctly but there is no carrier. In addition, the autotuner will attempt to adjust to the load but the 10w CW signal needed to perform the adjustment is not generated.

All settings are according to the manual. I've checked all programmable settings and they are per the manual also.

I sent it back to the dealer - who sent it to Kenwood - who replaced the CW key jack. You guessed it - still no CW.

Any suggestions out there?

3060. Icoms ah-4 vs at-180 ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-15 00:00:00 UTC
From: will_huckaba@baylor.edu
Message-ID: <80q2g3$g2q$1@ccis12.baylor.edu>
Source record: 94149

I am just curious what the differences in the AH-4 and the AT-180 antenna tuners.. I can find piles of information on the radios.. but when you get to these two external auto-tuners.. I have only found sparse information. The only 2 differences I have found is the AH-4 only tunes 80m-6m where the AT-180 adds 160m. And then the $200 more you pay for the AT-180. Is that solely for the tuning of 160? or is there something else that is not mentioned?

I am interested in attaching this to a IC-706MKii rig in a mobile configuration in a pickup truck.

And also any information on successful antenna setups with this general type would be really appreciated.

Please respond be email if you can... Thanks!

>
> Speaking from experience, they'll look at you a little funny at the
> drug store when you come in and buy a dozen bottles of mineral oil.

ha. Yes, they probably would.

Somebody else replied and said that the solvent I'd
have to use would be just about as nasty as the PCBs
themselves (lost that reply). They also said it
probably wouldn't be a problem if it wasn't leaking
(the can.)

So, I'm not sure what I want to do. On the one hand,
I'm a little scared of the stuff (since I don't know
much about PCBs except that I've heard they are bad
for you.) On the other hand, the can isn't leaking.
I may just err on the side of caution and consider
the $2 I spent for the thing a loss and purchase a new
one (or reasonable facsimile thereof.) I don't want to
take the chance of a spill or leak.

Thanks! (though I'd kind of like to check the looks
of the people when making a bulk mineral oil purchase.)

3062. Fujitsu TEN programming?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-15 00:00:00 UTC
From: Ken Harrison <respond.via@newsgroup.com>
Message-ID: <38310CB2.C364E060@newsgroup.com>
Source record: 94151

Some time back (perhaps as long as last year) somebody gave me instructions on programming a Fujitsu TEN commercial UHF radio. They said it was a matter of shorting out a pin for a plug in module to ground and that alone would set it into programming mode.

So, wouldn't you know it... I lost that info. I'm hoping that the person who sent me the original instructions still reads this newsgroup and may be able to help me out yet again. Though the service manual gives it's specs as 450-480 MHz, I'd like to see if it will wander on down to the UHF ham band.

I've been stung by spambots badly, so don't reply to the bogus email address in the header of this posting. You may send email to me at:

3070. Cantenna and PCB oils

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-15 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <80p8bm$3t6$1@holly.prod.itd.earthlink.net>
Source record: 94198

If you have small kids in the house, I'd dump it. The whole thing.
PCBs are NASTY!

If you have a toddler, GET RID OF IT!

Do you need the extra power rating the oil gives you? If not,
just leave it air cooled.

If you keep it, cleaning it out, then 'washing it' with solvents, like
alcohol, will get most of it out. But never perfectly clean. Still,
I always suspected there were vapors from mine when I had
one. And the cans do seep. You have to fill them full enough
to get over the top of the sleeve around the load otherwise the
oil doesn't get into the proper convection patterns to cool. And
that means the can is full enough to wet the lid if distrubed at all,
and the vent plug, and they seep....

Source record: 94200

Just a friendly request. This is not a personal thing just a matter
of agreed upon protocol. I think it may just be new posters
to the list who missed this in the subscriber instructions.

PLEASE put an indication that your post is an Auction
rather than a Horsetrading post in the Subject line.

Many of us are not interested in auction postings and we
have all agreed that auction posters will label their posts
in the Subject line and those not interested will use our filters
to remove such posts at our individual computers ... so
everyone is happy.

When you fail to use the appropriate terms in the Subject
line you bypass our filters and violate the protocol. Some
of us are very busy and prefer not to spend time reading
posts that are of no interest and that could have been auto-
matically screened out.

Also, Equipment is really for discussing equipment and
Swap is really for swapping. Not a big deal but since most
subscribe to both lists, it just seems a waste of bandwidth to
post the same message to both. IMO, of course.

Thank you for your courtesy in this matter. Please, no flames.

Are PCB's really that dangerous in the minuscule quantities after
a thorough cleaning?

I have an older Cantenna that is empty but that has an oil residue.
I have no idea what sort of oil it is and don't know how I'd learn
if it has PCB's. Is there a simple test?

I'll toss it in a heartbeat if persuaded it is really dangerous. Otherwise
I am headed to Texaco to buy some lubricant to fill it. I understand
they sell something there that is used in jets and that has excellent
high-temp characteristics ... it is big bucks to the airlines but cheap
enough retail. Gotta ask the fellow who told me this to tell me again
precisely which stuff it is. He was building a dummy load using a
big stainless Coke syrup can and this fluid ... wanted it to handle
5-10KW if possible ... no idea why.

3075. What kind of HF rig to buy

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-15 00:00:00 UTC
From: Ken Chafin <kenchafin-nospam@earthlink.net>
Message-ID: <38303AA2.12158851@earthlink.net>
Source record: 94203

I've just upgraded my license and I want to purchase a HF rig. I've narrowed my search down to the Icom IC-746, Kenwood TS-570S, and the Yaesu FT-920. I'm leaning toward the IC-746. I'd appreciate any comments about the function and features of these radios as I have no HF experience at all. Specifically I'm wondering:

Is computer control worthwhile?

What HF features are missing from one of the above radios that I will regret not having after I operate it?

I will not probably operate this radio mobile. Should I purchase a desk mike?

I plan to operate SSB, CW and RTTY. Do I need to purchase filters right away, or should I operate for a while to see if I need them?

I'd appreciate any input as the product reviews for these radios sound almost the same to me.

3077. DJ-C5T antenna replacement?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-15 00:00:00 UTC
From: Steve Heller <stheller@koyote.com>
Message-ID: <SUEwOHjEXe+vu754AmCume+DWLV+@4ax.com>
Source record: 94205
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

Is it possible to replace the antenna on the DJ-C5T with a better one
that will screw into the same connector? I like the radio, but its
standard antenna is very wimpy.

3078. FS: NEW CUSHCRAFT 6 METER BEAM

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-15 00:00:00 UTC
From: Dean Kastoris <n8ihs@home.com>
Message-ID: <383046CD.2E472B93@home.com>
Source record: 94206
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have a new, never assembled Cushcraft 6 meter beam for sale. This beam is the A503S 3 element 6 meter beam. I purchased this beam with the full intention of installing it. I have decided that I do not want to do this after all. This beam has never been assembled but I had opened the box upon delivery to make sure everything was intact for warranty purposes.
$75.00 plus shipping

Thanks Dean N8IHS

3079. FT-100 questions??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-15 00:00:00 UTC
From: STEVEN L UMBACH <N9ROU@prodigy.net>
Message-ID: <80pi16$22p4$1@newssvr03-int.news.prodigy.com>
Source record: 94207

I am considering buying a new Yaesu FT-100 for the shack now that they are down to $1199. I was thinking of buying a used FT-847, but don't think that satellite operation will be that important to me and might rather have a rig that would be great for mobile and portable, plus the FT-100 has vox and built in swr meter while the FT-847 does not. I would use the FT-100 mainly for 50mhz/144mhz and as a wide band scanner. The 430mhz would come in handy as an uplink if I did want to work Phase 3D someday - I would probably just need a Ten Tec transverter for downlink.
Question # 1 is how does the FT-100 perform as a scanner? Does it scan fast? Does it have selectable memory banks and if so can you use more than one bank at a time? I know it has 300 total memories.
Question # 2 is how do the fans operate on the FT-100? I know the FT-847 has one fan running constantly which probably would annoy me. Do late model FT-100's have a fan that runs constantly or do they cycle on/off during transmission and maybe occasionaly while receiving ?
Thanks for any help and please list any other information that I might want to know about the FT-100.
---- Steve KK9ZZ

3080. Re: What kind of HF rig to buy

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-15 00:00:00 UTC
From: Marv Luse <mwluse@dimensional.com>
Message-ID: <38305012.435B936C@dimensional.com>
Source record: 94208

Ken,

When I looked at this class of rig, I narrowed the field to the FT920 and IC746, and elected to get with the IC746. It's a great rig for the price, and I can find little with it to fault.

The IC746 comes standard with a 2.4 KHz filter, suitable for SSB use. I also installed a 1.8 KHz narrow SSB filter and a 500 KHz CW filter. I find I almost never use the narrow SSB filter, as the twin passband tuning does a better job of weeding out unwanted signals. I also find that with weak signal work I tend not to use any filters and instead rely upon the DSP engine between my ears. ;-)

Hope this helps.

Source record: 94210

I just purchased an FT-100 last week. It is a really neat radio. However, scanning is a little combersome. You have to mark all the frequencies you don't want to scan with a "skip" command. And there are no alpha displays like on the FT-90R. For Vhf and Uhf, the 90R is a cheaper and more usefull rig. It has wide band receiver and scans fast, it displays the alpha or the freq.. Don't get me wrong, the FT-100 is a really great radio, but if your not going to use HF, it is overkill.

Hi,
FS -- very good condition TS-440SAT HF allmode, transceiver. With
built in automatic antenna tuner. With original book, power cable and
hand microphone. 160-10 meters. 100+ watts on all bands.
AM/SSB/RTTY/CW/FM modes. 100 memories. Scan. IF Shift and Notch
filter. 10M+ serial number. Recent full alignment and service
bulletin modifications from Kenwood in California. Have receipt to
prove it! Priced to sell at
$549 + shipping.

Willing to trade for the following items:

Henry 2KD-3 amplifier
Ameritron AL-80B amplifier
Drake L4B or L7 amplifier
Collins gear
Solid state UHF repeater with controller & UHF cavities
on ham band (like a GE Master 2)

thanks,
Joe

That's because they're a P.O.S.!!!

3087. FS: NGC 15 meter monobander HF rig $150 + shipping

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-15 00:00:00 UTC
From: Joe K7JOE <K7JOE@yahoo.com>
Message-ID: <38305A63.BFF7857A@yahoo.com>
Source record: 94215
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Hi,
I have an NGC 15 meter HF monobander mobile radio for sale. Condition
is good to excellent. Have original book and microphone too. For
those not familiar, here's a photo:

http://www.xprt.net/~joentam/binary/ngc15.jpg

This is a 15 meter monoband rig. Covers 21.0 - 21.45 Mhz. 10-15 watts
output on high power, 2 to 3 watts output on low power. Has digital
LED freq readout, S/RF meter, big VFO knob, volume, RIT, HI/LOW power
and mode switch. Runs SSB (USB) and CW. Has key jack on rear panel
for
a cw key. Has speaker/headphone jack on front panel.

This was sold in the USA in the mid 1980's. Works great -- and with the
sunspots at a high, 15M is typically open well before sunrise and late
into the evening. The small size antenna is ideal for mobile HF comms.
I use a converted CB antenna and it works great. Or get a hamstick
antenna for 20 bucks and away you go. Oh yea...it's Y2K compliant and
can go for a week on a small gell-cell battery. Great for back
packing!

Price $150 + shipping.
thanks,
Joe K7JOE

****

I also have a 150 watt amplifier with preamp for those wanting to go QRO
with this monoband HF rig. Simply put the NCG into low power (2 watts
PEP) and drive this amp. 3 power settings on the amp: low gives 35
watts out, mid gives 85 watts out, and high gives 150+ watts out. Amp
is capable of up to 200 watts PEP. Uses genuine motorola MRF-454
transistors in push pull config. Has built in TR relay and SSB delay.
Pre-amp gives 15dB rx gain. $120 for the amp, or $245 for amp and
radio combo.

thanks,
Joe K7JOE

The LF antennas, like those mentioned and their cousins in Hawaii at Lua Lua Lei ore 1/4 mile high antennas! Great view from the top!!!

The VLF's like in Washington and Minnesota are the 7 Hz variety, and yes, they penetrate salt water very admirably. I, too, toured the Washington facility may years back. It was part of a side trip from a Hamfest being held very close to it.

The XYL and I both enjoyed the tour..

Time to go mobile! I have a very good condition Alinco DX-70.
Includes all original accessories, original box, original book,
cord, mic, etc. This one has not been used mobile. Covers all HF
bands,
160-6 meters. 100+ watts output on HF. 10W output
on six meters. All modes (SSB, FM, AM), 100 memories, split frequency,
repeaters, etc. Looks new. I have two of these --- one I use
in the mobile, other I use at the house. This is the nicer of the
two, and has been used solely on the desk. Re-doing ham shack.

Price is $540 + shipping.

thanks,
Joe K7JOE

Yes, I have had that stare before! Especially when you take all on the
shelf and ask, "Do you have a few pints more?". Also, be aware that the
cantenna is NOT a sealed unit. There is a small screw and felt washer
on top that allows it to vent when heated by RF. If this thing contains
PCB's, contact someone with the Power Company that has experience in
dealing with A. Testing for PCB contamination and B. Proper disposal.
It isn't worth your health at any cost to use it if it truly has
contained PCB...

Just my two cents worth...

Shack cleaning:

I have a very good condition Motorola MSY UHF repeater, currently on 461/466. Can easily be converted to ham UHF use. Setup includes 15 watt repeater exciter, Receiver, 90 watt amplifier, controller including: PL Tone, Squelch card, repeat card, audio mixing card, and a spare PL community tone board. Repeater works fine. RX Sensitivity is 0.21 uV. TX exciter output is 15 watts to a dummy load. In a 3 foot tall by 2 foot wide by 1 foot deep Motorola MSY cabinet. Have cabinet keys too. Includes MSY original manual as well.

As I am using GE Master Pro equipment, this Motorola UHF repeater is surplus to my needs.

Price is $250 .... pickup only in Portland Oregon (heavy) or I will deliver within the Eugene/Portland/Seattle areas in exchange for gas money.

thanks,
Joe K7JOE

I desperately need a Motorola FMTR-40V(D)1 tube two way portable radio unit. This was part of the "research line" from the late forties to mid fifties. This particular unit was used on police motorcycles during that period. I need this for a 1952 Harley Davidson Police bike that I'm restoring. These units were typically removed from the bikes before the bike was sold at auction. I am interested in ANY pre 1970 police motorcycle radio since I can use it as trading fodder for things I need for this bike. I hope somebody can help me.

I have an R1051B in very good condition for $450. For jpgs just ask.

From Ostermans:
Built from 1960 to 1981 by General Dynamics (some by Stewart-Warner), designed by Bendix for military use (many replaced the r-390s). Used by U.S. Navy and is optimized for independent sideband reception. Double conversion on low freqs.
Read out is decadic digital knobs. Weighs around 75 lbs (more when some accessories are added.
Current Osterman's value is given in the range of $300 to $550.

Some state health labs can run the test for PCB. It is not cheap. There are other labs that do the same testing. Check the yellow pages or call your state health lab and ask.

I would not worry about hte PCB stuff. It is really only bad if you
drink a lot of it. The main thing is that it does not break down and
if it is just pored out on the ground it gets in the food chain and
sooner or later gets back to you when you eat.

12 volt gel cell batteries for sale. Used but all load tested good. 30 day guarantee !!! Removed from burglar/fire alarm systems and replaced every 3-5 years with new ones as preventative maintenance for our customers. I have sold hundreds of these to the QRP boys on the QRP-L. I will stand behind every one sold 100% ! Prices listed INCLUDE shipping via UPS to your door.

12 volt 4AH --- $10
12 volt 6AH --- $12
12 volt 7AH --- $13

I have only a few 4's and 6's and about 36 of the 7's. Brands are mixed: Yuasa, Interstate, Portalac, Radionics, Power Patrol, MK Battery, Batteries Plus, Power Sonic and a couple of other brands. I do not and will not sell Panasonic brand as they have proven themselves to be total junk. Please email me with quantity desired and your zip code.

From: "Gregory B. Carey, Ph.D." <gandicarey@erols.com>
Message-ID: <80q7vs$s27$1@autumn.news.rcn.net>
Source record: 94238

De: Greg, KN4EL
Silver Spring, MD

Hi:
I couldn't resist the sale prices last year and wound up purchasing an Alinco
DJ-5TH dual bander (144/440, handheld). The radio was advertised as having extended reception from 108.000-173.995 Mhz, AM/FM and from 438.000-449.995 MHz. The WX transmissions are loud and clear @ 162Mhz, however, I can't receive ANYTHING in the airband with this radio. I've tried continuously scanning the 108-120Mhz frequency range while waiting for my parents' flights at Washington-Dulles Int'l airport and heard nothing. Have any of you experienced similar 'deafness' with this radio in the aircraft band? Is there a way to correct the problem?

Please email if you have any information.

Thanks, 73
Greg

Source record: 94266

Take a look at the Icom web site at

http://www.icom-america.com

for the service hints for the 730.

A reprint service manual can be obtained from Icom for $44 plus S&H. I know of no other source for this manual. I strongly suggest that you will find it difficult to impossible to work on this rig without the manual. Icom can usually supply parts.

You can contact Icom Tech Support at

icomtech@compuserve.com

Gary Fiber is the "main man" to talk to at Icom about tech problems. He is their most valuable employee by far! He frequently responds to email inquiries.

For Sale: Motorola CP-1250 Alphanumeric Pager, with Warranty

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=197808105

For active people with too much to do and too little time, Motorola gives you a dependable and stylish big screen word message pager so you can get things done with ease. The Motorola CP1250 combines advanced "Big Screen" technology with a premium feature set. The CP1250 can display up to eight lines of text and up to 26 characters per line. It is so powerful that it can even receive and display graphics, such as logos, charts and graphs. The CP1250 supports Motorola's FLEXTM Information Services Protocol to receive and display large quantities of Information Service messages in an easy to read manner. The user-friendly Message Management features allow stored messages to be moved into one of five relevant folders, such as 'task list' and 'phone list'. The 8-line to 4-line zoom control serves to further enhance its overall ease of use.

Get a complete list of features from Motorola's Website at:
http://www.mot.com/MIMS/MSPG/Products/Alpha/CP1250/features.html

This pager is in excellent shape (10 out of 10 cosmetically) and is almost brand new. I've just been given a new phone through work and no longer need it. This pager is worth over $180! Reserve price is VERY reasonable... Please email with any questions. Good luck, and thanks for looking!

Message-ID: <382f8662.1767022@netnews.worldnet.att.net>
Source record: 94272

The advantage of LF for the Navy is its ability to penetrate salt
water. This is of obvious usefulness to submarines of course.

There were also LF stations just across the river from the Naval
Academy in Annapolis. These were not the miles long variety, but
the tower field was sufficiently large with numerous antennas several
hundres of feet high. This morning's Washington Post had a story
about the dynamiting of several of them yesterday. They are excess to
the needs of the government. The land will be turned into a nature
preserve.

3126. Looking for AM air to ground transciever

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-15 00:00:00 UTC
From: jbojack@mindspring.com
Message-ID: <382f8d05.1872661@news.mindspring.com>
Source record: 94273

I am a glider pilot, (and ham, N0HRM), looking for a radio capable of transmitting/receiving AM on frequencies of 123.3 and 123.5mhz.

If you have one to sell, please contact me via email.

Looking for permanent installation type radio for my vehicle...prefer higher power transmitter than typical hand-held units.

Especially interested in TAIT radio.... anyone know where this company is?

Thanks,

John Bojack N0HRM

I purchased a RS DSP-40 and returned it shortly thereafter. I have since owned the JPS NIR-10 and NIR-12, and the RS unit is a joke, comparatively. You can pick up a used NIR-10 for about $100.

Message-ID: <80o8f3jna1@newsource.ihug.co.nz>
Source record: 94278

Hi All,

I am looking for some information for a fellow ham, he has a FT-8500 dual-band radio which he wishes to use full duplex via the packet data socket in the back of the radio.
He has found that using menu 12/40 changes the band for the data socket, but this changes both RX and TX.What he wants is to be able top RX on 2m and TX on 70cm.

Does anyone have any ideas I can pass on.

Thanks in advance.

Kevin.

About all it's good for is removing a carrier tone. As far as noise
reduction for SSB, don't waste your money. Get a good Timewave or JPS unit,
they are light years ahead of the RS unit.

I'm going to put up a page with links to all the logging and contest software I can find. If you sell, or know the URL of software for ham radio use, let me know and I'll add it to the list. I'm tired of hunting all over to find a decent program. I don't care whether it's shareware, freeware, or retail software. Just the URL and I'll make a link to their site.

Message-ID: <80otor$mf5$1@news1.mpx.com.au>
Source record: 94288

G'day there everyone,

I purchased a second hand Kenwood MC-50 microphone recently at a boot sale.

I've tried to clean all the crud from the microphone screen (yuck) but I can't seem to get the microphone section apart. Most microphones I've dealt with allow you to unscrew the body giving access to the insert and so-on. I've tried unscrewing the microphone sections with no luck. Maybe it is stuck together with years worth of gunk.

Has anyone else had these apart? I don't want to force the mic and break something but I'm sure you must be able to get them apart!

I've tried doing all sorts of searches on most of the popular search engines/indexes with no luck. When I find the answer I'll make a web site about "how to clean and service a Kenwood MC 50 microphone" !

Any ideas or feedback is appreciated,

Andrew.

Hi folks, need cash for the upcoming holidays? I am looking for old electronic musical instruments and other equipment from 1955-1992, in any condition, even BROKEN or parts:

SYNTHESIZERS or KEYBOARDS (the more knobs and dials, the better)
EFFECTS PROCESSORS (tape loop echos, filters, ring mods, freq shiftrs)
DRUM MACHINES (electronic sounds, TR808, TR909, SP1200)
SEQUENCERS (with faders for each step)
MIDI RACK MODULES (tone generators, synth racks, samplers)
VOCODERS (robot voice effect rack or keybd)
OLD PATCHABLE MODULAR OR ANALOG SYNTH (arp2600, ms20, paia, etc)

MOOG, ARP, Sequential Circuits Inc, Oberheim, Roland, Korg, Buchla, Serge, EML, EMS, PPG, Aries, Paia, Maplin, Steiner-Parker, Synton, Ionic, Polyfusion, Voyetra / Octave Plateau, Yamaha CS, etc (ANYTHING SIMILAR)

For a better idea of things I am looking for, please drop by my website: http://members.aol.com/rolandman1/index2.html

Please drop me a line if you've got something I might want or know someone who does. Be sure to include price and condition in your email. ***Please do not respond to this posting address, you should instead reply to rolandman1@aol.com*** Thank you in advance and apologies if this message pushes anyone over the edge! :)

The truth is that the Manufacturers try to milk as much $ as they can when a new product is released to help defray all the costs of bring that product to market. Even still they have to raid the profit of other established products to keep things going.
This practice is called "skimming the market". One the manufacturer knows that they have sold as many FT-100 as they can at top $ and sales will start to slump they start decreasing the price to recover sales. I was also told by one Ham radio store owner that 50 % of all his sales are from November to December. It is basically
"make it or break it".

Source record: 94092

Hello all,

We need some help with a problem with our Motorola Micor radio.

We are trying to turn a VHF Hi Motorola Micor Base Station into a
2m Repeater!

This is what we have so far:

Receiver is tuned to our frequency
Transmitter is tuned to our frequency
The duplexer is tuned to our frequency
CR957 (Diode on Receiver Interconnect Board) was removed
We have our repeater controller hooked up, as well

Here is our problem:

Our problem is with COS (COR) in the receiver. We are able to duplex
the radio, but once we throw the radio into transmit, the receiver's
COS goes down to .6 v!!!! This is a problem. The radio is duplexing
fine, but the COS level goes away once we start transmitting!

Any help is appreciated! We need help, please.

If you can help, Please E-mail me or call me.

I bought mine in Oct. of 1997 from HRO in Newcastle. It does not have the "G" upgrade but I find it very satisfactory. I get excellent reports both on SSB and all digital modes. Utilizing the 13-pin Din plug makes jumping from voice to digital a breeze. I would definitely purchase another one.

3156. DJ-580T 2/440 HT External Power Sources in the Car and Shack?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-16 00:00:00 UTC
From: DavidC <eDoc@netzero.net>
Message-ID: <s33r4hfuhsq78@freenews.remarq.com>
Source record: 94103

I have recently acquired a used DJ-580T 2/440 HT.
I would like to hear what folks are using for external
power sources in the car and shack.

I understand that an inline filter and fuse are required but
am curious as to the recommended values and alternative
sources to Alinco ... as a way to save money not to avoid
Alinco.

I have acquired a Radio Shack DC Power Cord 270-1528D
and some spare adapters that were on the sale shelf (they tend
to get lost). I will use a 1 amp fuse. Does that all sound OK?

Someone anonymously sent me a wonderful pdf pamphlet
from SGS-Thompson Microelectronics that documents the
many potential, and likely, sources of noise and spikes in a
modern vehicle. Scary!

Now I just need to figure out whose inline DC filter gets the
job done at the most reasonable price! Recommendations?

- Thanks! & 73, DavidC K1YP

Best bang for the buck is the IC-746. I was in your position this last
year. Luckily,
I got to Dayton and tried all three. I also looked at the IC-706 & the
FT-100.

I finally decided, by august, to go with the IC-746. It has everything the
other
have. Mine is extremely stable and the DSP filters are great with a really
hot
receiver. I haven't tried the additional filters as yet, because I haven't

needed them. I do RTTY and the filtering is built in. I'm thinking of
putting
my W9GR DSP on the matket.

The built in tuner even tunes the "standard 5" bands on a G5RV
antenna.

Plus, the 746 gives you all mode, 100 watt, 2meters. The others don't.

Timewave picked up their DSP and TNC line ... almost
put them out of business it was such a mess!
http://www.timewave.com/amprods.html

TEMPO picked up the Antenna Analyzer line.
http://www.aea-wireless.com/

Oddly enough the old AEA line is still viewable at:
http://www.mvangel.com/aea/

Ok, Icom gave you a repacked unit(different) and you changed the control head and still had the same problem. Am I correct?? If so, there is a problem with your location or "cockpit error".

3166. Question on electrical noise...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-16 00:00:00 UTC
From: "Brendan D. Miller" <bdmiller@u.arizona.edu>
Message-ID: <383232A9.F2D7A6DC@u.arizona.edu>
Source record: 94113

Hi, I'm not a regular visitor to this newsgroup, but I figured that if anyone would know the answer to this question, it'd be someone on here. I'm looking for a two way radio that doesn't require a ham radio operator's license, that is very resilient to electrical noise. I, with the University of Arizona, am working on a solar powered electrical vehicle which has a rather large AC motor that creates a good deal of electrical noise, and need a radio which will not be severely effected by this condition so that the driver may communicate with chase vehicles in his/her immediate vicinity. We have previously used the Motorola Spirit radios and found that they work fine on full power, but don't handle well as soon as the battery begins to discharge in the matter of an hour or so. We even stepped up to a 4 watt version, and had similar problems. What I was wondering was if anyone had any suggestions on radios that might work well in this given situation. The range does not necessarily have to be that long, a half mile would suffice. Something hand held is preferred though. If you don't know of specific models, knowing the bandwidth which would be least effected by this type of electrical noise would be equally as useful. Any help anyone can provide is greatly appreciated.

Thank you for your time and in advance for any help you can provide,

Brendan Miller

that isn't usually the problem with those radios, the boards usually get
some kind of junk on them, that's why i would never buy another kenwood,
and when i ask for replacements, they say, they don't
stock those parts any longer.

If memory serves me right the first Cantenna I had to find my own transformer oil and later Heath sold them with mineral oil. I dont think Heath ever sold Cantennas with anything other than mineral oil.

The first Cantenna which has transformer oil is outside the house in a plastic pail and I still use it all the time, the one with mineral oil is in my shop used for testing. The transformer oil will take more heat than mineral oil. Im not too concerned about PCB's, its safe as long as it's contained. dj

Hi,
I have a very urgent matter to purchase 10-30 pcs of PIC's - 17C42 (or
43, or 44) -25 MHz.
Immediate payment is guaranteed.
I will be grateful to you for your kind assistance.
Please belive - IT'S VERY URGENT AND IMPORTANT FOR ME!!!
Thank you in advance,
Igor UN7GM

The AH-4 tunes 7 to 54 MHz on an 8.2 foot whip and 3.5 to 54 MHz on a
whip or wire that is at least 23 feet long. The AH-4 does not tune
coaxial feed antennas.

The AT-180 tunes coaxial feed antennas like dipoles, trapped dipoles,
yagis etc. It will not tune long wire antennas. The AT-180 is good
for up to a 3:1 mismatch so tuning a G5RV or a 40 Meter dipole in the
80 meter band is beyond the tuners capability in most cases.

My Cantenna came with no oil. (A gallon of oil is awfully expensive to ship.) Instead I built the Cantenna (some minor assembly required), and then followed the directions and went to the drug store and bought lots and lots of bottles of mineral oil.

I have to agree with Ralph. Do not eat it and it should not pose a problem.

Back in the late 50's and 60's before we were told that it was a carcinogen etc. we used PCB laden oil for lots of things. I was employed by AT&T and we even used it as a lotion for dry hands in the winter months! I did this for about 10 years and now, 30 years later, I am still waiting for the third arm to start growing out of my back! Ha Ha...

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Congratulations on the upgrade!

>Is computer control worthwhile?

Yeah, it's worth it if you've got a good logging program that will interface with the rig - takes a lot of the work out of logging your contacts.

>What HF features are missing from one of the above radios that I will
>regret not having after I operate it?

If this is your first HF rig, you're going to be completely overwhelmed by all the features on any of the above rigs. Until you've actually spent some time on the bands, figured out what your *really* want to do (SSB, CW, RTTY, SSTV, etc. etc.) and started understand the features available and why you need them for the operating you intend to do, you really can't make an informed decision on what rig to buy.

>I will not probably operate this radio mobile. Should I purchase a desk
>mike?

You'll sound much better on a desk mike than any hand mike. Less fatigue too for those long-winded exchanges.

>I plan to operate SSB, CW and RTTY. Do I need to purchase filters right
>away, or should I operate for a while to see if I need them?

Same as my comments above - until you've worked the modes, understand what a filter will do to help the modes be more fun to work and then figured out what you really need, you'll probably be wasting your money.

My suggestion: Spend $500 or so on a good used rig like the FT-757GX, etc. - if you find one in good shape, it'll hold it's value for the year or two that you want to use it and will let you explore the world of HF without spending $1500 or more on a bunch of features you'll probably never use. Then, after you've learned what you really want a rig to do, you can make a much better choice on a new rig.

With all that said, if you're still set on buying a new rig, I think the FT-920 is an oustanding rig - had mine a year now and absolutely love it. Considered (briefly) the Icom rig but went with Yaesu primarily based on information I've heard about their factory service

and after-the-sale support. Yaesu has probably the best service of any big manufacturer - I've used them on a few occasions with different rigs and was always pleased.

The rigs you're considering are for the most part very similar so your decision will likely come down to a brand preference or other factors than the actual rigs themselves.

Finally, if you can get to a store and actually twiddle the knobs and play with these rigs on the air, you'll figure out pretty quickly which one you want.

http://www.cushcraft.com/support/pdf/MA5B.pdf contains the
complete MA5B manual.

I would never put up a trapped beam, just too many compromises
and points of potential failure. Cushcraft also suffers from a poor
reputation for customer service and quality in their Amateur line
(at least from what I have read online, I cannot address those
issues directly from personal experience).

Have you looked at the Force 12, Tennadyne and KMA offerings?
All avoid traps. Force 12 uses a multi-mono design stacked on a single
boom. Tennadyne and KMA offer log periodics.

Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.scanner

Back in the days when only women wore earrings and men walked the surface of the Moon, the Motorola HT-220 was the hottest handheld on the market when it was introduced in 1969. Tougher than a pit bull, this VHF or UHF business band handheld in a weatherproof housing was the envy of ham radio operators for its compact size and performance.

The HT-220 Page has been updated and includes photos and discussion of special HT-220s such as the Secret Service, Medical ECG, and Touch-Tone models. This website has information including model tables, frequency conversions, parts and accessories, manual numbers, tech tips and stories.
See http://www.batnet.com/mfwright/HT220.html

Comments about the HT220 by visitors to this webpage:

"THOUSANDS STILL IN USE."
"I use both VHF and UHF models everyday."
"I've taken VHF units up to 220 MHz (a real 220 220)."
"HT220 is truly an object deserving of such a shrine!"
"It was and still is a engineering marvel."
"They are very easy to re-condition."
"I still think it is the nicest looking, most purposeful radio ever produced."
"The HT-220 still lives!"
"I cut my teeth on the HT-200 and went on to the HT-220."
"I can remember in the mid-70s the envy we all felt for the BMOC that had an HT220."
"What is that?!?" (from a generation X-er first seeing a HT220)

I feel the same way about traps. I have one in the kitchen that keeps stopping up.
Now back to reality, please list all of the compromises and points of potential
failure in a trapped beam, and also include reliable sources of your information.
I believe there must be a trap conspiracy going on and has been for many years and
we are just now being made aware of it! I am glad to learn there are no points of
potential failure in a log periodic, etc... I guess I was lucky with my Hygain
TH6-DXX that was in the air for 11 years with no problem. Must have been
extraordinary band conditions also considering all of the DX I worked!. Sure glad
I switched to wire antennas when I did. Oh no!, one of these has traps in it!

>that makes sure the requested transmit frequency is inside the band.

This radio is also notorious for having problems with the main VCO coil.
If this is not adjusted properly, and more importantly, sealed so it will
not vibrate and change, then the synth lock light will be seen often.
I also built one of these in Feb. 1977 and used it for many years. The
VCO problem was one of the few I had and I eventually solved it.
Replaced that damn phono jack for RF out too!

>
>The original HW-2036 has a guaranteed range of only 2 MHz. When it was
>designed, (mid 1970s) FM activity was all between 146 and 148 MHz. Normal

There was a mod for this limitation available, but I never performed it.
Search about and I'm sure you'll find it somewhere.

Hello, Cleve!

I've built all three, plus the PA for the two-meter rig.

They go together easily, all the parts where there, the manuals are even clearer than Heathkit!

Performance rivals commercial rigs.

Hey, for another hundred-and a quarter, build the two-meter version, and the t-kit two to six transverter!

Bill KS3Y

My TS-450 recently started changing frequency a little
after each time I moved the main tuning knob. It came to
rest, but the freq changed a little. Is there any type of
dial backlash adjustment? Anyone ever have this problem?

I have a Radio Shack HTX 100 and I like to work CW mobile. The filter that comes with the radio attenuates the recieve to a level that is almost unreadable. I prefer to recieve in the USB mode when working CW because even though the frequency response is wider, I recieve a lot better. Is there a modification that will allow my recieve to be routed through the SSB filter during recieve in the CW Mode?Does anyone out there have the service manual or schematic of this little rig for sale?

3231. FT-757 GX Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-17 00:00:00 UTC
From: Reid Hill <rhill@interconnect.net>
Message-ID: <383367BB.D9AFE401@interconnect.net>
Source record: 94066

I am having problems with a 757GX. The radio is having a recieve and transmit problem. The RX gets worse as you go from bottom to top of the band (ie AM broadcast to 10M) and there is no TX at all. It does not even key in CW mode. I was wondering if there might a quick fix or if someone might of had the same problem. Im thiking it is the finals but a friend said it might be more simple than that. We have no techs in this area so I was hopping for some input from the group and I really dont want to ship it off.

TIA & 73's

Is there a source for the manuals? Any help would be deeply >appreciated!

Hello,

Does it receive?

The HW-2036 is designed so that it won't transmit outside the 2 meter band. If you try to transmit outside the band, the "SYNTH LOCK" light will come on and the T/R relay won't stay closed. There's actually a logic circuit in the rig that makes sure the requested transmit frequency is inside the band.

Note the four position switch marked "+600 - SIM - -600 AUX". This switch sets the transmitter offset relative to the receive frequency, which is set by the lever switches. Having this switch in the wrong position can cause the rig not to transmit. The stock HW-2036 came with offset xtals for +600 kHz, simplex, and -600 kHz, but the AUX socket was empty. In those days some repeaters used splits other than 600 kHz - there were a few that used 146.76/146.94, for example.

The original HW-2036 has a guaranteed range of only 2 MHz. When it was designed, (mid 1970s) FM activity was all between 146 and 148 MHz. Normal procedure was to align the rig at 147 MHz or thereabouts.

I built mine in 1977, and still use it every day.

3238. HELP!!!! Trouble With an IC706

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-17 00:00:00 UTC
From: rjbennett@aol.com
Message-ID: <19991116203639.09706.00000160@ng-xb1.aol.com>
Source record: 94116

I have an IC706 that has been back to Icom 3 times for repair. They can never find the problem. If anyone can point me in the right direction to solve the problem I would appreciate it. The radio works fine for an hour or so and then seem sto lock up. The tuning dial and memory buttons make the frequency display change but the radio will not tune. It seems to be stuck in the 40 meter band somewhere as I hear audio and shortwave broadcast stations as the radio self tunes or more like a drift to settle somewhere in the band. I have tried the CPU reset and still nothing. I oredered the service manual to give it a try as they cannot find or simulate the problem and told me they gave me a "repacked" unit less the control head. I have swapped out the contol head too, didn't fix it. The unit works after it has been off for 8 hours or so as when I get back to the office the next day it works. Anyone ever experiece this problem? I have also noticed that it usually fails after I change bands.

Celwave TDN7407 duplexer used by Motorola. This is the same duplexer found on R100, GR300/500 and GR1225 repeaters. Small 6 cavity mobile type duplexer with N connectors. Will handle up to 50 watts RF.

Will tune down to the 444 MHz ham freqs and up to 470 MHz. I can have this duplexer tuned to your freqs too.

$ 195.00

Howdy,

We are looking for a way to contact the 400 or so U.S. Leap Day Baby Hams out there. Use to be you could use a qrz or similar database search of the birthday and there you have it. But, now what do we do. Would appreciate anyones help in figuring this out with the old database or some clever way to get something fresh. Figure one in one thousand four hundred and sixty into 600,000 hams. Be cool if we could get the international database as well. Your thoughts will be appreciated!
Someone had actually compiled a list in the past, but all sorts of search engine time and no results....

thanks in advance if you have some ideas.

Max, KK7HI

If it is what I think it is, and thats the sommerkamp 2000, it is the same
radio as the RCI 2950. The radio has the same PC board as that radio and a
2950 faceplte will fit it. Mods and enhancements for the 50 will work quite
well and can be found all over the net.
Sandor KG4FET
Try http://www.rciweb.com for mods and how and where to order CD Roms,manuals,

For Sale:

Kenwood TR-2500 Two meter HT. Memories and
scan. Subaudible tone built in. Rubber duck and
wall charger included. Unit shows some wear.
Includes manual and original box. $ 85

Bianchi (spelling ?) real leather case for TR-2500 or
TR-2600. Includes belt clip. $ 15

Kenwood DC-26, adapter to plug into cigarette
lighter in car, and convert to proper voltage for
TR-2500 or TR-2600. $ 20

Spare, heavy duty "aftermarket" 1000 mahr
battery for TR-2500 or TR-2600. $ 55

Kenwood ST-2 desk charger for use with TR-2500 /
TR-2600. Quick charge (about 1.5 hours), plus can be
used to power the HT at the same time. Great shape.
$ 70

Kenwood MS-1 mobile charger and stand. Runs off of
13 V DC. Standard charge rate, but also powers the
TR-2500 / 2600 HT. $ 35

Kenwood VB-2530 two meter amplifier. Up your HT
power to about 30 watts. Useful on most any HT.
Like new, with original box and manual. $ 65

Kenwood PS-50 power supply. 13 V DC at 20 amps.
Includes provision for powering an extra radio, in addition
to the regular radio with heavy 6 pin plug. This one looks
almost like new. $ 150

Prices do not include shipping from Florida.

Thanks.

3257. Need Yaesu FT-50 info

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-17 00:00:00 UTC
From: Marty Wallace <maw@hiwaay.net>
Message-ID: <EdyY3.21099$YI2.950051@typ11.nn.bcandid.com>
Source record: 94135
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Hello all,

I was wondering if there are any differences between the eariler models of the Yaesu FT-50 and the new ones out now. Specfically, I know that there were some pretty neat mods for extended frequency Tx/Rx on the older radios. Has there been any modification to the new ones being manufactured now that limits this?

I am considering getting one of these radios. Any other info or tips of this nature would be greatly appreciated.

Thanks,
Marty Wallace - KG4ETA

When did this problem crop up? This the first time I heard anything about it
and I read this newsgroup everyday. My 2100H is about 6 mos old and no problems

Source record: 94137

You could look into FRS, Family Radio Service, or GMRS, General Mobile Radio Service. These both share the same UHF radio band. GMRS used to be know as the class "A" CB band and requires a license (no test). FRS sort of replace the class "B" CB license because the class "B" license had a lower power restriction, FRS is much more limited but requires no license. These are both FM and should reduce the amount of interference the motor generates, the old class "D" CB band (this the normal CB radio band) is AM and I would not recommend it.

I would recommend powering this off a separate power source. This will help isolate the noise to some extent and the radio will less subject to voltage drop from the heavy current draw of the motor. Also, a small solar panel, 5-15W, could provide daytime trickle charge for the communication battery.

3260. WTD: Fan for TS-130SE

Subject:
MAKE MONEY FAST!!!
Date:
11 Nov 1999 15:36:57 PST
From:
"Chris Knight" <c_knight56@hotmail.com>
Organization:
Knight Industries
Newsgroups:
alt.shenanigans

A few days ago, i discovered this article within a newsgroup. This article
assured me I could wasily make thousands of dollars within weeks. The
article stated that all I had to do to get these results was send $1.00 to
each of the six names given within the article. I would then add my own
name and address at the bottom of this list (at position number 6) and post
the article in a minimum of 200 newsgroups. By the way, there are thousands
of newsgroups.

So after thinking it over, and talking to a few people first, I thought
about trying it. I figured what have I got to lose except 6 stamps and
$6.00, right?

Like most of us I was a little skeptical and a little worried about the
legal aspects of it all. So I checked it out with the US Post Office
(1-800-725-2161) and they confirmed that it is indeed legal!

Then I invested the measly $6.00...plus postage... well GUESS WHAT!!...
within 7 days, I started getting money in the mail! I was shocked! I still
figured it would end soon, and didn't give it another thought. But the
money just kept coming in. In my first week, I made about $20.00 to $30.00
dollars. by the end of the second week I had made a total of over $1,000!
In the third week I had over $10,000.00 and it's still growing. This is now
my fourth week and I have made a totoal of just over $42,000.00 and it's

still coming in rapidly...

It's certainly worth $6.00, and 6 stamps, I spend more than that at McDonald's!

Let me tell you how this works and most importantly, why it works... so,

make sure you print a copy of this article NOW, so you can get the information off of it as you need it. The process is very simple and consists of 3 easy steps:

Step 1:
Get 6 separate sheets of paper then write the following on each: "Please

put me on your mailing list."

Now get 6 US $1.00 bills (or equivalent in your local currency) and place
ONE inside EACH of the 6 sheets of paper so the bill will not be seen through the envelope to prevent thievery. Next, place on paper in each of
the 6 envelopes and seal them. You should now have 6 sealed envelopes, each
with a sheet of paper stating the above phrase, your name and address, and a
$1.00 bill. What your are doing is creatign a service by this. This is absolutely legal! Mail the 6 envelopes to the following addresses:

#1 Kevin Brooks
PO Box 309568
Denton, TX 76203

#2 Yaw Bonsu
1113 Abrams Rd #174
Richardson, TX 75081

#3 Karina Gomez
10770 NW 40th St
Sunrise, FL 33351

#4 T. Smith
2769 Jester Lane
Columbus, OH 43231

#5 S. Moss
13803 108th AVE NE
Kirkland, WA 98034

#6 O. Salinas
P.O. Box 270962
Dallas, Texas 75227-0962

Now take the #1 name off the list tha tyou see aboe, move the other names up
(6 becomes 5, 5 becomes 4, etc...) and add Your name as number 6 on the list.

Step #: Change anything you need to, but try to keep this article as close
to original as possible. Now, post your amendee article toa t least 200
newsgroups. Remember, there are tens of thousands of newsgroups and more

are being added every day! All you need is 200, but the more you post the
more money you make!

That's it! all you have to do is jump to different newsgroups and post away,
after you get the hang of it, it will take about 30 seconds for each
newsgroup!

**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL
MAKE!!
BUT YOU HAVE TO POST A MINIMUM OF 200**

That's it! You will begin receiving money from around the world within
day's! You may eventually want to rent a PO Box due to the large amount of
mail/money you receive. If you wish to stay anonymous, you can invent a
name to use as long as the postman will deliver it.

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT

P.S. Don't know How to post in the newsgroups? Well do exactly the
following
below:

DIRECTIONS - HOW TO POST TO NEWSGROUPS
1. You do not need to re-tup this entire letter to do your own posting.
Right mouse click somewhere in this document and then click on
"select-all". At this point the entire letter should be highlighted.
Then,
from the
'edit' pull down menu at the top of you screen select 'copy'. This will
copy the entire letter intot he computers memory.

2. Open a blank 'notepad' file and place your cursor at the tope of the
blank page. From the 'edit' pull down menu select 'paste'. This will
paste
a copy of the letter into notepad so that you can add your name to the
list.
Remember to eliminate the #1 position, move everyone up a spot
(re-number
everyone else's positions), and add yourself in as #6.

3. Save your new notepad file as a .txt file. if you want to do your
posting in different sittings, you'll always have this file to go back
to.

(NETSCAPE USERS)
1. Within the Netscape program, go to the pull-down window entitled

'Window', select 'Netscape News'. Then from the pull down menu
'Options',
select 'Show all news groups'. After a few moments a list of all the
news
groups on your server will show up. Click on any news group you desire.
From within this news group, click on the 'TO NEWS' button, which should
be
in the top left corner of the news groups page. This will bring up a
message box.

2. Fill in the subject. This will be the header that everyone sees as
they scroll through the list of postings in a particular group.

3. Highlight the entire contents of your .txt file and copy them using
the same techniques as before. Go back to the news group 'TO NEWS'
posting
you are creating and paste the letter into the body of your posting.

4. Hit the 'Send' Button in the upper left corner.

(INTERNET EXPLORER USERS)
1. Go to news groups and select 'Post and Article'

2. Fill in the subject. This will be the header that everyone sees as
they scroll through the list of postings in a particular group.

3. Highlight the entire contents of your .txt file and copy them using
the same technique as before. go back to the news group 'TO NEWS"
posting
you are creating and paste the letter into the body of your posting.

4. Hit the 'Send' Button in the upper left corner.

(E MAIL USERS)
1. Start by e-mailing people that you know personally.

2. Go to any e-mail database and search under e-mail addresses. (There
are thousands of them!) E-mail everyone that you can.

THAT'S IT! All you have to dod is jump to different news groups and post

away, or e-mail it and after you get the hang of it, it will take about
30
seconds!

THE MORE YOU DO , THE MORE MONEY YOU WILL MAKE
That's it! You will begin receiving money from around the world within
days! Again, you may eventually want to rent a PO Box due to the large
amount of mail you receive. if you wish to stay anonymous, you can
invent a
name to use, as long as the postman will deliver to. Now the Why part:

Out of 200 postings, say I receive only 5 replies (a very low example).
So

then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make and additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 news groups with my name at #1 and if still 5 persons per 200 news groups react I will receive $15,625.00! With a original investment of only $6.00! AMAZING! And as I said 5 responses are actually VERY LOW! Averages are probable 20 to 30! Let's put those figures at just 15 responses per person. Here is what you will make:

at #6 $15.00
at #5 $225.00
at #4 $3,375.00
at #3 $50,625.00
at #2 $759,375.00
at #1 $11,390,625.00

When your name is no longer on the list, you just take the latest posting in the news groups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the Internet and reading these articles everyday, JUST LIKE YOU are now!! So can you afford $6.00 and see if it really works?? I think so...

People have said, "What if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet and news groups everyday and are willing to give it a try? Estimates are at

20,000 to 50,000 new users, every day, with thousands of those joining the
actual Internet. Remeber, play FAIRLY and HONESTLY and this will work. You
just have to be honest.

Make sure you print this article our RIGHT NOW, also. Try to keep a list of
everyone that sends you money and always keep an eye on the news groups to
make sure everyone is playing fairly. Remember, HONESTY IS THE BEST
POLICY.

You don't need to cheat the basic idea to make the money!

GOOD LUCK to all and please play fairly and enjoy the huge rewards from
this, which is tons of extra CASH.

3262. Re: Product Review: Radio Shack HTX-10 10M allmode rig

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-17 00:00:00 UTC
From: w9sz@prairienet.org
Message-ID: <RxzY3.1483$Ak5.29@firefly>
Source record: 94140

In a previous article, K7JOE@yahoo.com (Joe K7JOE) says:

>
>Ladies and gentlement,
>Having gone into Radio Shack yesterday to buy a couple feet of RG-8X
>coaxial cable, I came across a new offering in amateur radio gear.
>The new Radio Shack HTX-10 10 meter HF mobile radio.
>
>Unit tested is serial number 3xx, so one of the first out of the gate.
>
>This is a new entry into the 10 meter mobile market. Here are some
>features:
>
>Freq Coverage: 28.0 - 29.7 Mhz
>Modes: AM, FM, LSB, USB.....there is no CW capability

Then it isn't an all-mode rig.

My HTX-100 serves mostly as an I-F for VHF/UHF/microwave transverters.
All the weak-signal work on these bands is done via USB or CW, so the
HTX-100 is perfect for the use. I have yet to make a QSO with anything
but CW on 903 MHz or higher in the weak-signal segments.

The manufacturers probably didn't expect the HTX-100 to be used for that
purpose, but I know many VHF weak-signal enthusiasts who use them as I-F
rigs, mainly due to the small size, simplicity, quietness of the digital
section, and ease of modification. I have mine set to "low power" and
the output turned down to 2 watts via the small adjustment pot inside.

>Power: 25 watts nominal LSB, USB, FM. 8 Watts carrier on AM.

Does it have a low-power setting, as the HTX-100 does?

>Freq Tuning Rates: 100 Khz, 10 Khz, 1 Khz.
>Fine Tuning: moves both TX and RX frequency +- about 2.5 Khz

This seems a bit inconvenient for SSB. Is this with two separate knobs? I'd
prefer a bare minimum of 100 Hz tuning rate on the MAIN knob, preferably
10 Hz. I'd hate to have to tune 2 knobs while driving down an
interstate!

>Accessories: mobile bracket, mic, and power cable.
>
>Upon seeing the radio, one does a double take -- the radio looks
>almost identical to the current offering of SSB CB radio. The
>noticeable differences are few: The 10M rig offers an up/down
>microphone, the 10M offering says "10 meter HF transceiver" on the face

>plate, and thre 10M hf radio has a significant heat sink on the back
>panel (integrated into the back panel actually).
>

I wonder if this isn't maybe meant to hit the "freeband" market in disguise?

[snip]

Doesn't sound all that impressive to me. I think the HTX-100 was a
better, more useful radio.

I guess I'll just have to see one to see what it does.

If you watch closely you will see the dial actually move a slight
amount. That is an optical encoder and is very sensitive. If you adjust
the dial tension up just a little it will stop the problem.

And I think you are much too rude particularly in matters that
are of no concern to you. As we both know you don't work for RT
Systems and in fact they seem to find you a bit of an embarassment.
Before you go calling and harranging them let me share with you.

At a recent hamfest I was at the RT table when a fellow came up
and asked Mrs. RT who you were. She looked down obviously embarassed
and said that she had heard the name but didn't know you. It would
seem to me that your self apointed role as protector and PR man is
not playing well in Alabama but I wouldn't expect you to care after
all this isn't about RT it's about your ego isn't it.
>
> Someone whines, "This product sucks."

> > there have the service manual or schematic of this little rig for sale?

The HTX100 uses the same filter for SSB and CW. What is different is
the offset of the carrier oscillator and LO, to place the signal at a
different point in the passband. You could change the carrier
oscillator offset to place the passband differently, but this would
result in inaccurate dial readings because the LO offset is switched by
the CPU. If you are having that much trouble, perhaps your CW carrier
oscillator adjustment is misaligned. I've got the service manual at
home; send me private mail if you need the alignment spec.

Some questions about FRS

1. Does anyone know about a site that details the capabilities and restrictions concerning the use of FRS for commercial activities - is there a problem with tying up the frequency to transmit bursts of data?

2. Can this frequency support digital transmission?

3. Can distance from transmitted to receiver be accurately gauged depending on the power output to any degree of accuracy (5%-10%%)

4. Ideas about the cost of a transmitter? A receiver?

I would not worry about the PCB,s unless you are about to drown in a tanker full of the stuff: anyway, crossing a freeway blindfolded during rush hour is very dangerous too. If it puts your mind at ease, use the cheapest vegtable oil you can find at the supermarket. I have had one of these cantennas using vegtable oil for about 20yrs and the container is still in good shape. By the way, don't throw away those gallon paint cans after you are done with using the contents: clean them out and keep as a spare for future use.

3274. STOP BEING RIPPED OFF==>[rec.read.save]<===

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-18 00:00:00 UTC
From: msisco9939@aol.com
Message-ID: <19991118125506.01101.00001152@ng-cg1.aol.com>
Source record: 94002

If you do not care about being Ripped-Off
or Miss-lead, then please disregard. If you
have been a VICTUM, I would suggest you
read on (AND SAVE)
==========
ITS TIME AGAIN...I have being seeing person(s)
being RIPPED-OFF and MISS-LEAD by Scam Artists
time and time again, and thought the following
might be helpfull. PLEASE, this is a "Personal"
point of view and "MAY" or "MAY NOT" reflect the
views of others.

Especially Scam Artists !!
****
1. KNOW WHO YOU ARE DEALING WITH !!!!
****
a) Ask for a Full Name
b) Ask for a Home Address (Note at bottom)
c) Ask for a Home Phone Number
d) Ask for a Work Phone Number
e) Ask for "Any" Special Licenses; Ham Radio,
CET, Radio Telephone, etc.
++++++++++
Notes:

Watch Out For P.O. Boxes, and PLEASE NOT
everyone with a P.O. Box is Untrustworthy
or a Scam Artist. (Even I have a P.O. Box),
and many persons live in Rual Areas.

I have just found that "Sometimes" Scam Artists
like to use them, and use Miss-Leading DOMAIN
Systems as a cover, some even using a Pay Telephone
as a return number.

BE VARY CAUTIOUS about "ANY" Bussiness or DOMAIN
provider that has "ONLY" a P.O. Box. for a return
address, with little or no substance. If it has
been under construction for some period of time,
it may be worth a second look.

==========>BEWARE<==========

Some Domain Providers, Bussiness, and Scam Artist
have easily manipulated ISP's and have been known
to Create Fake (or similar) EMail Names and

addresses to "LOOK JUST LIKE THE REAL THING" Some
Domain Providers also been known to manipulate "Tag"
counters to show they have been hit 1000's perhaps
10's of thousands of time to "LOOK LEGIT"

==========>USE COMMON SENSE<==========

****
2. ASK FOR REFERENCIES !!!!==>AND I MEAN ASK<==
****
a) Ask the Person or business "How Long" they have
been trading / swapping / on the NewsGroups.
b) Ask about "ANY CURRENT" or PAST transactions on
Internet, and Email Address of the person delt
with.
c) Ask if they are a "DEALER" and cross check with
the Telephone Company in the City the Dealer is
in.
==========
NOTES:

EBAY has a "GOOD" way of judging a persons Charactor,
and most anyone can check the FEEDBACK profile of
persons on EBAY. In General, the Higher number of
POSITIVE responses, the more favorable (or honest)
the person probably may be.

SACM ARTIST have a VERY DIFFICULT TIME in manipulating
the safe gards in Ebay, and these safe gards can add
to the price of a item being offered. Some Like Ebay
and some don't, but Ebay is a Fact of Life, and will
not be going away anytime soon.
==========
****
3. ASK QUESTIONS ABOUT THE EQUIPMENT !
****

a) Ask How Old the Equipment / Material is
b) Is it operational?
c) On a scale from 0-10, 10 being Brand New, How
would it be rated.
d) Has it ever been Repaired or Serviced?
e) Does it have the Original Model / Serial Tags?
g) Will the person selling the equipment stand behind
the purchase for a short period of time? Especially
Helpfull on HIGH END Items.
==========
Notes:

On FREQUENCY SENSITIVE equipment, make sure its in the
range you may be interested in. Again use COMMON SENSE!!

Would you spend 1000.00's of your hard earned monies
on a piece of JUNK? I see persons doing that at many
times on old beat up gear all the time. What a Waste!
==
****
3. NOW TO THE "M O N I E S ". THIS IS A VERY TOUCHY
SUBJECT HERE ON THE NEWSGROUP !!!!
****

a) BEWARE of the $25.00-$50.00 SCAMS. They are Very
Hard to collect on when a deal falls through.
b) BEWARE OF "SENDING MONEY IN ADVANCE"
c) Keep your receipt if you use a Postal Money Order

Notes:

Again this is a VERY TOUCHY subject, and probably
has many points of view. I will give up one of my
secrets. Personally, I do Not Care for COD's. One
really has no guarantee if they perhaps are going
to receive a Box of Bricks, or receive a bad check.

If one uses some simple safe gards, one can "Lock"
in a deal with a seller by offering a Postal Money
order in advance, while someone else is just giving
thought of what to do, a smart buyer has already has
a check on the way.

When a Postal Money Order is sent, it comes under
the guidelines of Postal Fraud if you have been Miss-
lead or Scammed. Altough you may not get your monies
back, rest assured, Postal Inspectors will be looking
into the complaint....Sometimes these Scam Artist get
more than they bargin for. Banks and Local law enforc-
ment have a tough time following up o a complaint.

On the other side of the coin the SELLER can
receive his funds in just a day or two, and BUYER
(if the seller is reputable) SHOULD receive his goods
in just few days.

The whole trade / transaction is completed in just a
few days. Also please note that this is ONLY TRUE
if BOTH parties are responsible persons. Many things
can interupt a transaction.

a) Computer Crash
b) Family Emergency
c) Illness
d) Cheaper price being offered

So again, its pretty important that a transaction be
completed in a timely manor.

I have varified Federal Express does a Super Job on COD's, but they still are a bit expensive. UPS on the other side, well they are still improving, but my experience has showwn they can take weeks to deliver a check to the sender.

SCAM ARTIST "JUST HATE" POSTS LIKE THIS ONE, AND MANY TIMES WILL REPLY WITH A NEGITIVE RESPONSE, BUT SINCE THE NEWSGROUP IS IMPORTANT TO THOUSANDS, MAYBE THEY (THE SCAM ARTIST) WILL JUST GO ELSEWHERE

MAKES GOOD BUSSINESS (AND GOOD SENSE)

HAPPY TRADING

MS

3275. ALPHA 76 FS, Beautiful inside and out. The word mint is over used these days.

Alpha 76
This is it! My pride and joy used less then 40 hours. I am the original owner (only owner) and the unit is in its original packing box, covered with the original plastic wrap. Original promotional material are included. She has been stored for years in my closet in dry California Climate. She is a child of the 70's. I live in a mobile home community and I am not allowed to ham. I have to let her go. Bought from PAL Electronics in MPLS, MN.
Here's how she is shaped-Alpha PA-76 Serial #5130 Two 8874's includes the optional Hypersil Power Transformer. Freq Coverage Tunable 1.8-2.0- 3-30 MHz. Includes 10 meters. Bands 1.8 3.5 7 14 21 & 10. Drive Power Nominal 100 Watts PEP,50 Watts. Tube Complement: Two Eimac 8874 ceramic-metal grounded grid triodes. Wired Transformer currently wired for 220V can be changed to 110V. I do not have 220V or a way to and test her but she work fine when I last used her years ago, no warranty is offered.
The jack connecting the Transformer to the unit was broken when received new, but it makes a good connection and I never repaired it. The price does not include shipping. The transformer will ship separately due to the weight factor. Shipping will be from zip 94089 YOU MUST BE A CURRENTLY LICENSED US or CANADIAN HAM or NO SALE.
Price $1300.00 Bank check only

I bet on that small rig , the cw filtering is audio filtering. I bet you could bypass that some way. But I may be all wet, I've never seen the inerds to one of those. Most cw audio filtering is set up to be used around for a 800-1000 hz tone. So if you were off that freq, it could sound fairly bunky. My IC 730 has audio cw filtering in the cw position the same way. But works fine on it. Actually I wish it was narrower. It needs a cw filter. MK

> Thanks for any info. Any other general alignment advice is appreciated,
> too. 73,

Use the calibrator signal in the receiver. Turn it on and tune in the middle of the band. Say on 80m, tune the signal in for 3750 kc. You will hear the calibrator signal. When you cut off the oscilation, the receiver will go dead. Then turn it back the amount they state in the manual. Actually the tuning on those particular coils are not that particular. Not near as much as peaking up the rest of them in that coil pack. Really, if they are oscillating, thats good enough. But all the other ones that "peak" the circuit are the ones you want to get right on the money. The calibrator in those old rigs is a great signal to use for alignment. I can align a hybrid kenwood probably 80% just using that one feature alone without any other gear. Really handy. BTW, be real carefull tuning those slugs in the coil packs. They are brittle and can break easily. Use the correct plastic tool, and make sure it's inserted properly all the way in. If it feels stuck, be real carefull, and don't get carried away on the force needed to turn. They can break apart. MK

> whip or wire that is at least 23 feet long. The AH-4 does not tune
> coaxial feed antennas.

Actually you can convince it to tune coax quite nicely. I made a
ground plane for mine attached to the ground lug and the four
screw holes in the tuner base. On the hot side I fitted an SO-239
and a jumper from the long wire connector. It tunes up reasonable
loads like Hamsticks, Outbacker etc FB. I have even been able to

load the SGC-303 multiband whip from 10 to 75M. Like most base loaded antennas it sucks on 75 but it does present the TXVR a reasonable load and actually does radiate. To be fair I use VERY shot coax runs with this configuration but it does work.

Another wonderful use for the AH-4 is as a base match for a screwdriver type antenna. The most efficient way to do this is to use it as a long wire tuner but it will do just fine in the coax feed configuration. Just adjust the screwdriver for the lowest radiation resistance--AKA resonant point--then let the AH-4 match the impedence.

Just my two bits worth and certainly not endorsed by Icom.

3282. FT-50 battery/memory question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-18 00:00:00 UTC
From: valerie65@my-deja.com
Message-ID: <811qe6cqs1@nnrp1.deja.com>
Source record: 94010

I recently had the internal lithium back-up battery in my FT-50RD changed by Yaesu (and yes, also had the power-on knob replaced). However, I was surprised when I got the radio back to see all the set memories I had plugged in still intact. Previous experience taught me most radios will lose their memories when an internal battery is taken out. Is the FT-50 an exception, or is it possible Yaesu took the trouble to download the memories first, changed the battery and replaced the data? Any ideas?

Thanks,
Valerie

There is one honest trader on these groups that I would like to place in the spotlight. Mr. Randy Chavis (wb4una@aol.com).

I purchased a Kenwood TS-60 from Randy a few weeks ago. When the radio arrived at my house, it had transmit problems and the display lights were out. I contacted Randy and he was shocked to hear that I received the radio in such a fashion (he had checked it prior to shipping and found all was in fine shape). Something happened to it during shipping and it needs expensive repairs. Randy filed a claim with UPS and had the radio picked up from my house, so they could inspect it. He is getting the runaround from UPS concerning his claim, but vowed to repay me no matter what happened. I want all of you to know that he paid me back for the radio plus some extra for my troubles.

Sorry for the lengthy story, but with all of the negativity on these groups, I thought a good inspirational story would perk things up.

Don't hesitate to trade with Randy, he is truly one of the "good guys".

Well, unless it's on sale, it's actually $149.95...
but that's still a good deal.

The innards seem to be the latest thing and are a
successor to (but reasonably similar to) those in
the RS TRC485 AM/SSB CB.

The SuperStar *may* not be the newest design (of
course that actually could be a *good* thing,
dunno.)

But overall a nice, nicely-built rig

Hi Guys,

IMHO, tribanders have always been about compromise. Traps are
just one of those compromises. If you want directionality and a
horizontally polarized antenna in a reduced size multiband
antenna, well traps are just going to be a part of the package.
If you have the space and money, monobanders will work better.
The more practical comparison here is "mini-beam" vs. true
tribander. There are real differences here too. I chose a Mosley
Mini-33 tribander (mini beam) because it's only 10 lbs. The MA5B
is HEAVY and the elements are visibly thicker (reduced visibility
of the antenna was also one of my requirments). Mini beams are
also a major feat to tune, I don't care whose you buy. Size,
visibility, weight, cost, gain. Choose your best solution!

3294. Re: ** FT-51 MOD ? **

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-18 00:00:00 UTC
From: DE <de262@yahoo.com>
Message-ID: <383488d3$0$96884@news.voyager.net>
Source record: 94022

Hi,
I did the wide tx/rx mod on my ft51r. The radio oddly enough will transmit at 800mhz to beyond 921mhz. However, there is no hardware inside the radio that allows it to receive there. I made several phone calls to experts and Yeasu about this. The radio will show the freq. and transmit there but will not receive! This also holds true for the models sold in Canada and Europe.

3295. FS: Heathkit SB-200 Linear Amp

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-18 00:00:00 UTC
From: rpemers@aol.com
Message-ID: <19991118185153.01091.00000714@ng-fy1.aol.com>
Source record: 94023

This classic SB-200 is in excellent condition both cosmetically and operationally. It covers 80, 40, 20, 15 and 10 meters but will also tune the WARC bands at reduced output. Tubes are good with a 600-700 watt output on all bands except 10 meters. It does right around 400-450 on 10. Also have installed the Harbach "Soft-Key" mod to allow the antenna relay to be keyed with a modern transceiver. I run it with a Knwd TS-570SG. Selling to keep peace with the neighbors and buy a mobile HF rig. I will only email pictures to serious buyers!! I would to have $375 for the amp and split the shipping cost with the buyer. Since it operates on 10 meters, I will only sell this amp to a licensed ham.
If interested, email to rpemers@aol.com

Thanks and 73

Hello, Reid and Group!

This is a fairly common problem with GX's and SX's that are used mobile.

FIRST: disconnect and reconnect ALL of the boards and jumpers. The main glitch seems to be the vertical board on the right hand side.

Next: check the antenna change-over circuit. Check both the diode and the neon bulb. A strong enough blast of RF can whack either one, or the other, or both!

That will probably take care of your problem. These are great radios, but a little preventative maintenance goes a long way!

73!

3305. Audio transmitter/receiver

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-18 00:00:00 UTC
From: CCR <CCRieker@~att.net>
Message-ID: <812gsiekj1@bgtnsc01.worldnet.att.net>
Source record: 94033

I would like to build, or preferrably purchase, a device that would allow me to broadcast the mono audio output of a handheld portable MP3 or minidisk player to a remote low voltage audio amplifier/speaker combination.
System requirements:
1) The remote speaker would never be more than about 30 feet from the transmitter.
2) Low voltage (9Vdc max) and low power consumption of the transmitter/receiver is essential.
3) The outputs of the MP3 or MiniDisk are of near CD quality of course, and I would like to be able to broadcast that signal with little or no degradation in audio quality.

The amplifier circuit is no problem, broadcasting the signal is where I need help. Can anyone suggest a (relatively) inexpensive product that could accomplish this? I am no electronics whiz, just a hobbyist with a project in mind. Thank you very much for your help.
Craig Rieker

On my HTX-100 when you tune the singnal in to the correct freq. it get
louder
than receiving in ssb mode.
With a cw signal that is almost in the noise in ssb mode it stands out in cw
mode.

I am the original owner of a Kenwood TS-930SAT with the following add-ons
for sale. 250 Hz CW filter, SP-930 external speaker. Unit works just fine.
I would rate the unit as a 9-9.5. Has mods to allow use of the SM-220, plus
all the other "standard" 930 mods.

$675 plus COD shipping. Can also be viewed/picked up in North Alabama.

Well, well, well....

Just received my HTX-10 Service Manual. It's finally off backorder.

Unfortunately the index indicates that the schematic is on page 54 - there is no schematic, and page 53 is the last printed page before the rear cover. Another copy of the instruction manual was attached. All this for $20 some bucks... ya-hee. Rushed out the door, perhaps, given its backorder status, dunno...

[Dunno if this was just a mistake on my manual only, or if this was a printing problem, or if the packager just forgot to grab the schematic and put it along with the service manual - conceivably it could have been a separate 2-page foldout item, not bound into the book. Got in touch w/Tandy and "they're looking into it". My local RS store manager said if that didn't do it, he'd help rattle some cages; he understands why schematics are important to hams and that many of us are not "consumer product" people.]

Nevertheless, it does lay out PLL calibration, give comprehensive alignment steps & test trees, etc.

Prob. much of this manual has been somewhat "boilerplated" from the TRC-485 CB manual - for example, a voltage chart for most all the transistor E/B/C or D/G/S measurement points includes introductory standard conditions, including the text "Measurement channel: CH 19". I'm hoping these test values are correct, as the TRC485 seems to use an older & somewhat different board than the HTX10. English text is OK but with a bit of an abrupt style.

A Very Preliminary Quick Look

(warning: prob. an error or two here... just what I can quickly infer from a convoluted blk diagram)

Looking at the blowup pics of the CPU board I see no sign of jumpers, 0-ohm "resistors", or friendly areas where diode matrices offer "configurability".

The PLL synth + CPU + display controller LC72322 runs off of a 4.5MHz xtal clock. This clock xtal is "pulled" by the

clarifier control in conjunction w/a varactor. (This is OK since CPU doesn't perform any ultra precise timekeeping duties and is primarily only for PLL frequency control & assoc. dial & display functions.)

This 4.5MHz oscillator does not appear to feed anywhere else other than the PLL/CPU chip. The dividers (or early "swallow counter" stages thereof) on this PLL are fast so no offset mixer is needed. (The 72322 apparently will run a PLL at up to 150MHz.)

The FM modulator is not apparent from the block diagram; I'd bet they just apply some filtered & preemphasized mic audio, when in FM mode, to the varactor on this 4.5MHz reference.

NOTE: the 10.24MHz is 2nd AM/FM LO is *ONLY* (at least from the blk diagram). Even though 10.24MHz is a "friendly" number for PLL CBs it's not really useful for the HTX-10's 1KHz PLL steps.

The 10.6975MHz "carrier osc" xtal is "pull-tuned" by LC circuits for the 3 modes - 10.6975 is for USB mode, 10.695MHz for AM, 10.6925 for LSB.

But according to the diagram, it doesn't seem to need this osc. for AM/FM receive as SSB and AM/FM have 2 separate receive signal paths. In AM or FM, the VCO mixes sig down to a 10.695MHz 1st AM/FM IF, w/no gain stage. Then, a 10.24MHz 2nd L0 mixes 1st IF down to 455kHz 2nd AM/FM IF, where there are 2 gain stages before AM or FM detectors.

For SSB receive, it appears that after 1st conversion mix w/VCO, a 10.695MHz resultant SSB IF signal runs thru xtal filter & *four* gain stages) before a 10.695MHz (+/- 2.5kHz offset for USB/LSB) is injected into product detector to bring it down to audio. (Is this mixing operation "demodulation" or also a "conversion": that is, can we still call this double conversion? Hmmmm.)

From the above numbers, you can kinda infer the transmit path. A 10.695MHz (AM; +/- 2.5kHz for LSB/USB) carrier oscillator is run, in SSB modes, thru a balanced mixer; no mod is run thru the bal. mix in AM mode. This bal. mixer output sig is mixed w/ a VCO signal up to 28.xxx MHz. In AM mode, a 3 stage transistor modulator feeds the driver & final amp. (No, they didn't turn around the audio amp IC in transmit like lots of older CBs.)

But given the above, with the standardized filters/tuned ckts set up for those IF freqs, and with no "mixer offset oscillator", it looks like one really can't change xtals to move freqs; the PLL divider number must be changed.... and that's only software accessible. Adding mixer/buffer/offset ckts in both T and R would be the only way to "pull" this radio - or to replace the PLL control unit...

More when I know more (and/or correct mistakes above...)

Unrelated... Does the frequency control knob rotate smoothly 360 deg on your radio's?

Mine seems to have a resistance though smooth (like a wobally (sp) wheel?

Just curious?

i turned down the power on hi setting from 55 watts to 40 watts since my radio is out of warranty. I know if the final blows it is just as cheap to replace the whole radio than to repair it. If you open up the radio there are only 3 pots. One for Deviation marked DEV, another for Microphone level called MIC, and the one for power is called PWR. . connect the radio up to a power meter and turn (not sure which way) but the power can go from 35 watts minimum on the high setting to 65 watts (don't do this). I guess the best thing to dois to see if you can increase the heat sink on the pwr transistor.

I just bought a used Yaesu FRG8800 from a guy in CT who assured me that it worked. When I unpacked it and plugged it in it recieved fine but the tuning won't work. The display reads "188.888.818" like a wire got disconnected in shipping. (And we all know how rough the delivery services can be.) Any ideas? Email (moo) (@) (midtown) (.) (net) .

Ok, now I'm feeling a little bit better about this.
I still don't think I want it in the house, so perhaps
a short length of coax to a pail containing the dummy
load outside would be a good thing. Maybe a 5 gallon
pail with the lid on it and a PVC pipe setup so the
coax can go in but keep out the water. Or better yet,
I could keep the setup in the garage.

Thanks all for the informative posts!

I looked for the same a few months ago, and when I could not find one,
started working on a program myself. I will post some screenshots to
www.leune.org/radio/hfblog/ later today to give you an impression.
This project is under construction, and there will be no quick
results! I'm sort of short in time at the moment.

tune the signal in better on your main dial when in cw mode
or ssb mode.. perhaps you like a tone thats out of the
optimal filter range... you may have a IF shift adjustment
that will work..

Check out http://radio.linux.org.au and look for logging programs.
There are a half dozen or so, one or two of which I don't mind too much.

I confess that I don't find any of them to be ideal. I've never really
looked at Windows programs to do the job because I don't want to be
running Windows for much longer. I will start to code my own for linux
in the near future I expect.

: of a foxhunt by overzealous, post-TEOTWAWKI HAM's searching for a
ticketless
: illegal, they would probably be met with equally overzealous use of force.
: This author advises anyone and everyone who is interested in pursuing the
: interest of radio communications to be good little citizens, give the FCC
: your name, social security number and home address so that they may
license
: you properly and you will then be allowed to purchase and use the
following
: gear with the included caveats.****
:
:
: To Sparhawk,
:
: IMNHO, try finding a Pre-1999 Yaesu FT50 at a HAM swap meet. They are
: obscenely simple to freeband (open up to reception and/or transmission on
a
: very wide number of frequencies). Another good one that doesn't need
much
: modifications to receive a ton of freqs (including, but not limited to: AM
```

: and FM radio, Shortwave, TV sound, police, fire, FEMA, State agencies,
: Federal Agencies, 800 mhz and some 900 mhz (with the cell freqs blocked.
.
: .no, honest!)). Neither of these are inexpensive, running about $300 -
$400
: apiece. Both are extremely durable and conform to several mil-specs for
: water-resistance, shock and dust.
:
:
: >
: > 2. what affects the range of a handheld (I want about a five mile
: > range)?
:
: Good luck without a repeater. I've barely pulled 5 miles under the best
of
: conditions with the small "rubber ducky" antenna on my handhelds unless I
: was plugged into something other than the standard battery pack.
Everything
: in your environment affects transmission and reception from how hilly (or
: not) the ground is to solar flares.
:
:
: >
: > 3. are throat mikes/ ear-pieces a gimmick or real advantage in certain
: > situations?
:
: Both have their advantages. I have a couple of different ones, but they
are
: also expensive if you're looking for waterproof ones. You will also have
a
: difficult time finding any specifically made for HAM radios. Luckily, the
: commercial brand of Yaesu (called Vertex) has a lot of high-quality throat
: and bone-conduction mikes available from aftermarket producers (do a
search
: for "New Eagle" on the web).
:
:
: >
: > 4. can you encrypt/scramble communications with a handheld?
:
: Yes, you can illegally modify a Digital Encryption System board into your
: handheld. You may want to get a business radio (e.g., a Motorola Sabre)
: which already has the board installed. Again, check legal issues here.
The
: FCC has deemed it to be against the law to encrypt amateur radio signals,
: but a few have done it. DES systems are also a touch expensive (around
$600
: for state-of-the-art boards. . each) and I'd recommend having someone who
is
: an accomplished radio repair person do the installation which will also

add
: to the cost.
:
:
: >
: > 5. why the interest on the signal ranges of handhelds?
:
: See above comments upon what you can receive.
:
:
: >
: > 6. can a base station be used to boost the range of handhelds in a
: > geographic area?
:
: Yes, and some handhelds can do this also. Do a search for (IIRC) the
: Kenwood TK-G71 which has a built-in cross band repeater.
:
:
: >
: >
: > I am not a HAM operator and training in such is a way down my list of
: > priorities. What I do need immediately is to set up some form of basic
: > 'portable' communication system that is secure as possible.
:
: See above. Also I'd suggest going legal. HAM's are known to have little
: else to do but play frequency cop and will actually get together to track
: you down if they find out you're transmitting without your license. And
: this is painfully easy to do. Some look at it as a sport. When they find
: you, they will turn you over to the Federal Authorities.
:
: Unless you want the FCC SWAT/HRT team kicking in your door, go get a basic
: No-Code Technician's license. Practically anyone with an IQ over 80 who
can
: remember a few basic rules can get it. Go to Radio Shack and buy their
: 6-tape No-Code license instruction tapes and listen to them on the way to
: work. The tapes cost about $30 for the set and teach you everything you
need
: to know to get started.
:
: However, even the highest level of amateur licensing will not allow you to
: transmit encrypted messages. . .so I'd suggest saving that for a true
: TEOTWAWKI scenario.
:
:
: >
: > I have run a search on the newsgroup but recent posts on this topic
: > were scarce. I would appreciate any help that is out there.
:
: Few people here will talk that much about it. Again, HAM's can be a bit
: overeager in their flaming of such suggestions. Some of what you've

: discussed can actually be dangerous if you don't know what you're doing.
If
: you have a powerful transmitter and your mike locks open on a freq used by
: cops, fire or emergency personnel, it can cause a major problem to them,
so
: there are some true concerns to be worried about.
:
: >
: >
: > John M
: >
: > PS: as an aside I note on 'Die Hard 2' the radio used was a Kenwood TH -
: > 450-AT. Does such a radio with such capabilities exists - I cannot find
: > it on the Kenwood site.
:
: Probably, but remember the terrorists were government guys with access to
: the best equipment. There's a lot of stuff that is simply not sold to
: regular people.
:
: Oh to have the set up that I had when in the military, but alas, I cannot
: afford (or will not spend) $2 - $4K on a handheld that eats up batteries
: like a member of Overeater's Anonymous who's fallen off the wagon at an
: all-you-can-eat salad bar. Lithium-Ion batteries cost big $$ and alkaline
: AA's drain very quickly when you start adding DES capability and transmit
on
: the highest power settings.
:
: Just some thoughts, hope they help.

I you like to build a High Power amp using the very best parts
available, I have them. I gave up the project. These parts are all for
a twin 8877 AMP.
Two Eimac 8877/YU-158 Ultra Linear tubes with sockets, pulls $400 each.
Two Jennings 12-500PF CSVF Blue line 7.5KV Vac Variables with machine
mounts and shafts. These are the top of the line vacs. $400 each
Filament transformer for the twin 8877s $120
Hypersil Plate transformer for the twin 8877 $300
I have several Jennings Ceramic vac relays also

3333. Re: What do you think of the Radio Shack HTX 242 Two Meter?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-19 00:00:00 UTC
From: will_huckaba@baylor.edu
Message-ID: <814iicotm1@ccis12.baylor.edu>
Source record: 93897

The Radio Shack HTX 242 was the first radio I owned when
I got my license back in 95. I used it fairly often the
whole span up-until August of this year, which was when
I moved up here to college, where everyone lives on 440.
I borrowed a Radio Shack 440 mhz handheld for some time
before breaking down and buying the ADI AT-600 dualbander.

The whole time I used the Radio Shack radios, I had no
problem at all, both voice and packet applications. The
only thing I noticed (on the 2m radio) was a tendency to
get very warm to the hand.

As for modifications, though, Tandy wanted a radio that
mods were nearly impossible to preform.. and that is
what they got. I know of very few sucessful modifications
to any of the Radio Shack Amateur line... which is not
bad, as long as you intend to stay a Ham. :-) But all of
them seem to lack a little bit of their bigger brothers
in the ICOM line... but it is hardly noticible, to me
anyhow.

Answers (I won't quote your questions)

1. It's FAMILY radio service, not commercial. Regardless of mode, you can't use it for commercial service. FCC rules may regulate mode -- with the FCC's current enforcement climate, you may not want to test this. How big a data burst?

2. Absolutely yes, but within the limits of the license. Any frequency can support digital comm, but the available bandwidth limits usability.

3. Absolutely not, since it's UHF and prone to reflection and atmospheric vagaries. You should see what a few watts can do under tropo ducting conditions.

4. Starting around $49. for some nice Motorola transceivers.

Other bands are available, such as the 900 MHz ISM, with more lax regulation than FRS. In addition, you could develop your modulation schemes on amateur radio bands (within the limits of your license, of course) and port them to the nearest commercial band. Commercial licensing is neither free nor easy.

I disagree.

My response (as reposted by Marksman), was a reply to a question posted in misc.survivalism/alt.survival by a person who was looking for a rugged portable handheld to be used in a survival or preparedness situation.

Both m.s and a.s are groups where the discussion topics vary widely. I have no idea who posted this to talk.politics.guns

From: Keith McQueen <n7hmf@ucares.org>
Message-ID: <3835fef4_3@news.sisna.com>
Source record: 93909

I assume you're talking about modifying a commercial or ham HT to transmit on the FRS frequencies. Amateur (ham) HTs and most commercial HTs use a wider (5khz) deviation than do FRS radios. Aside from bad sounding audio (much clipping and over-deviation), using these radios on FRS would result in interference to adjacent channels. Probably the overwhelming reason to not due this is that it is not legal. Radios used in the FRS service must be type accepted for the FRS service. This is not the same as the type acceptance necessary for radios used in the commercial (part 90) service. There are very specific requirements for a FRS radio such as non-detachable antenna, power levels, deviation, etc. Modified ham and commercial radios just do not meet these requirements.

HI Ken,

Please look at the ICOM, IC-756. It has a spectrum analyzer on the front display. I think it is really great. You can see where stations are and where there is a clear place to transmitt. It is in about the same price range as the ones you mantioned.

You will always find other things you want as you gain operating experience, but don't let that stop you from buying.

Good luck, Bill

I also have IC-2100 and found out about this say 11 months ago. IT appeared that many of the IC-2000 were going dead on tranmit. I thought the radio was to small for 55 watts and reduced the power to 40 watts from 55 watts. That may have saved me but I am sure I purchased my radio well before this stuff popped up (now out of warranty). I may have been better to have the finals go and get a whole new final/heatsink assenbly. I will look at the heatsink to the finals and decide if I can improve the situation. I may also put a fan on top of the heat sink also.

Source record: 93946

I don't know about the model of Somerkamp you have, but I had one about 15 years ago, it was based on the Yaseu at the time. Wonderful machine, as you know covers from 26-30MHz. My one had a 100w amp built onto the back of it, as shipped. Now mine came from Switzerland, but that does not mean they are being made in Korea now.

I do not have any other information about it, I sold mine many years ago. Have to admit I brought mine when I was a pirate CB'er, used mainly on 27MHz to contact Australia and the USA, and of course Europe when it came through. But that changed many years ago when I became a Ham.

Hope this helps with some information.

Kevin, ZL1UDD.

Howdy.

I was asked to add a prefix look up utility. It is now available on the QSL page at http://hfradio.org - If you need to know where a prefix is from, simply enter the call or prefix and see what country it is assigned to.

Don't forget: http://hfradio.org, a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a Software editor -- someone who can review and post software links, etc. Let me know if you are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Thanks. Yes, I was very nervous turning the coils, as several were very
stuck. But, they eventually gave way after repeatedly applying and
removing a little torque with the little plastic tool.

About the aligning, someone else pointed out something to me via e-mail
which worked beautifully. I have the DG-5 display, which also functions as
a counter. You can connect the rig's HET output to the DG-5's COUNT input,
and just read out directly the het osc frequency. There is a table in the
manual which says what it should be for each band, and so I tuned each one
that way.

However, I should also point out that, before this exact method was pointed
out to me, I did what you said, tuning it with the calibrator. This got it
very close, based upon the results by monitoring the actual het osc freq.

Thanks,
--

: Thanks,
: Marty Wallace - KG4ETA
: maw@hiwaay.net

The later ones will not go to "band-free" mode.
However, most of them(if not all of them) can still be modded well(but not
as broad as band-free).
also, getting CMT out of them can be rough, but as the '50 images 90.2 Mhz
both below AND above the actual frequency, don't worry about it much!
If you are looking for a used unit, I know that ser#'s starting with 6M
free-band, and ones with 7L do not.
I'm not sure where exactly between those 2 the radios were changed.

NOTE, I've heard rumors of a different mod for the newer ones that gives
coverage similar to the band-free mods....HOWEVER, I've seen NO actual
evidence of this mod actually existing.
(and I've LOOKED)-I have a old one, but I know people with new ones that
could use the data.

3361. EQUIPMENT FOR SALE....PRICE NEGOTIABLE:

Following equipment for sale...need cash...must get things happening in my life, and that takes funds:

1. Yacht Boy 400pe: less than 1 mo. use...nice unit, w/ac adapter, manuals if I can find them: I would like $100 bucks, if possible, but will be flexible on the price.

2. radio shack DX-394 Shortwave reciever....good condition. I would like 75 bucks, but will be negotiable on the price

3. Uniden bearcat 100-channel scanner:bc198xlt: 50 bucks, but will gladly negotiate.

Buyer pays shipping costs...money orders preffered, but personal checks also accepted, provided they do not bounce.

Call 717-867-4876 ANYTIME, ask for Hank

Or, reply via email to: hank@ezonline.com

Thanks, friends.

Jason C Rubenstei (jruben4@uic.edu) wrote:
: Does anyone know of any HT that has RX/TX capacity (or the ability to be
: modified to have the capacity) for the FRS frequencies?

Here are the FRS frequencies, from the Code of Federal Regulations. I know a number of dual or broad band radios that cover this range. However, I do not know how many have the precision tuning to reach that 4th decimal place with +/- 0.0005
Also, keep in mind that FRS radios not only have a tone code for privacy, but some models also include a scrambling feature.

Sec. 95.627 FRS unit channel frequencies.

(a) The FRS unit channel frequencies are:

Channel No.	(MHz)
1	462.5625
2	462.5875
3	462.6125
4	462.6375
5	462.6625
6	462.6875
7	462.7125
8	467.5625
9	467.5875
10	467.6125
11	467.6375
12	467.6625
13	467.6875
14	467.7125

> a problem with tying up the frequency to transmit bursts of data?

Yes - FRS is for voice communications ONLY.

"You may use an FRS unit to conduct two-way voice communications with another person. You may use the FRS unit to transmit one-way communications only to establish communications with another person, send an emergency message, provide traveler assistance, make a voice page, or to conduct a brief test."

Business use is OK - but nothing but voice.

What power level did you have in mind?

If you're looking for 20 watts up to 600 or so, you can get kits
for the Motorola Application Note amplifiers from folks like
Communications Concepts and Mainline.

If you want more than that you're almost certainly on your own.
References to "metalwork" usually imply a tube amp, and few of
the good designs require more than hand tools (and patience :-)
to make.

Big amplifiers need big power supplies (figure 50 volts at 50
amps for a big solid-state amplifier, 3000 volts at 1 amp for
a U.S. legal limit tube amp). This can be a bigger challenge
than the amplifier itself.

Source record: 93974

I had little lack with shortened beams. With decreased size comes smaller range of SWR, gain and good F/B. Thus a very small beam may have a good SWR and F/B over 10 db over a range of 100 KHz only on 20m, and only if it is well tuned. If the antenna is located close to objects, there may be major retuning necessary.

With a bit more space, short log-periodic are likely to perform as good or better with much less hassle and no more expense. If low turning radius and good tuning are desired, a 3 or 5 band 2-el quad may be the answer.

Ignacy, NO9E

3385. Re: Murch 2000 transmatch-help

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-19 00:00:00 UTC
From: John Streyle <streyle_john@si.com>
Message-ID: <38358566$1@news.si.com>
Source record: 93978

I'm using a Murch UT-2000B transmatch, bought privately/used, and didn't get a manual either. I had to replace the rubber band in the inductor turns counter - rigged up a metal spring. Other than that, works fine. I've been using it only for a long wire so far - haven't had time to put up anything else.

Not sure if this helps or not. I've hooked the long wire to the 'direct' binding post on the back, disconnecting the built in balun for 'ladder line'.

Perhaps you could provide pointers to, phone number, urls, etc for the
two companies you named. I was unable to find either.

Thanks in advance.

Communication Concepts advertise regularly in the magazines,
and a very quick search of the web came up with:

http://www.communication-concepts.com

Mainline's web presence (http://www.mainlinegroup.co.uk)
only seems to be a placeholder, but their phone number last
time I ordered from them was +44 116 2777648. Probably
subject to yet another U.K. number reorganization. :-(

That portion of the UHF band uses 12.5 kHz channel spacing - there are
other users assigned to a frequency halfway between each FRS frequency.
Because of that, FRS radios have relatively narrow FM deviation,
fairly tight frequency tolerances, and likely narrower IF than most
ham radios.

To have a ham radio work well on FRS, you'll need to find one that
supports 12.5 kHz channels and out-of-band transmit. Then you may
need to adjust the reference oscillator to bring its transmit frequency
to within a few hundred Hz of being correct (a typical ham HT could
be 2.5 kHz off frequency and still be within spec). Then you should
reduce the transmit deviation. The receive IF filtering will still
be too wide, but it's not easy to change that.

Having done all that, the radio is likely technically compatible with
FRS - but still illegal.

Why are you assuming pirates will be the purchasers of this rig?

Of the maybe 11 or 12 rigs that I know that have been sold, EVERY
ONE went to a HAM.

I see this BS every single time RS comes out with a HAM product.
All this chicken little "The CBers will get them!" and "Radio Shack
had better restrict sales" kind of HS. (That's Horse Excrement
in case you wondered)

Well, I'm GLAD Radio Shack came out with this stuff. I'm GLAD
it's becoming more mainstream. It's driving prices down and
equipment quality up. It's getting more people into the hobby.
And hopefully it will cause some of the old fogies in HAM radio
to WAKE UP! And before I get flamed, I don't mean the old
fogies the some people will take at first glance. They ignore
the fact that it was the QCWA (Quarter Century Wireless)
people that proposed the first big positive change in the rules in
years.

3392. FS: Nearly Complete TS520 Station

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-19 00:00:00 UTC
From: treynolds@my-deja.com
Message-ID: <814cr3$82d$1@nnrp1.deja.com>
Source record: 93985
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.boatanchors

For Sale: TS520S transciever with CW filter, VFO520 external VFO, SP520 external speaker, and TV502 2 meter transverter. Everything works very well. Cosmetically the VFO and speaker are a 9 of 10. The transverter and radio are a 7.5-8 out of 10. The most serious cosmetic defect is that the transciever carrying strap on the side is frayed. Aside from that the chrome trim on the front of the radio is not as bright as it was when new and the similar trim ring on the transverter has scratches on it. The transverter also has other small scratches on the top and side. To give you idea of how bad they are you must be within two feet of the radio to see them.

I offered this for sale locally but so far have not had any luck. So I am trying the internet.
$400.

3393. Re: Cantenna with PCB oil?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-19 00:00:00 UTC
From: Jim Weir <jim@rst-engr.com>
Message-ID: <RqE1OFMnck3det8sPwnxQVsuH1kO@4ax.com>
Source record: 93986

Ken Harrison <respond.via@newsgroup.com>
shared these priceless pearls of wisdom:

->So, I'm not sure what I want to do. On the one hand,
->I'm a little scared of the stuff (since I don't know
->much about PCBs except that I've heard they are bad
->for you.) On the other hand, the can isn't leaking.
->I may just err on the side of caution and consider
->the $2 I spent for the thing a loss and purchase a new
->one (or reasonable facsimile thereof.) I don't want to
->take the chance of a spill or leak.

Put on rubber gloves. Find a large 5 gallon used paint container that is fairly clean. Put the cantenna inside the paint can, open the lid, and carefully pour all the oil inside into the paint can. Get yourself half a gallon of lacquer thinner (not paint thinner). Pour half the thinner into the cantenna, put the lid back on, and slosh it smartly about. Pour the thinner into the paint can along with the oil. Repeat. Next time your county has a hazardous materials collection day, take the gallon and a half of mixed crap oil and tell the specialist that you AREN'T SURE what the oil used was. Don't refer to PCB, let them make that determination. In all collection days I've seen, there is a drum for "unknown solvents", and it is rather expensive for them to dispose of it, but that's why you are paying good property taxes.

Now fill the cantenna with automatic transmission fluid (the red stuff) so that the next owner will be able to tell pretty well what the oil is just by the color (yes, I know it could be MIL-5606 hydraulic fluid, but they are both pretty benign). My cantenna has performed flawlessly from a watt to a kilowatt over the last 20 years this way.

Jim

->
->Thanks! (though I'd kind of like to check the looks
->of the people when making a bulk mineral oil purchase.)

I don't see why you would get flamed over this. We all have our opinions. and guys on this newsgroup seem to respect that (just don't ever get involved in a code/nocode argument).

I have found after numerous postings that if you don't keep it short and to the point, guys don't bother to read it. I guess I should have gone on to explaine that, at least in my experience, RS clerks do not seem to worry whether you have a ham license or not when you ask to buy a rig that is ham-band capable. I don't think any of the retailers, even the major ham only retailers, would check this, but RS is almost on "every" street-corner, mailing ads to "every" home.

Also, I have heard (haven't been monitoring 10 myself, and so haven't heard it) there has been a _tremendous_ increase in the amount of unlicensed phone operation in the exclusively-CW portion of 10M.

This is all on top of being asked by a non-ham acquaintance for my recommendation recently of which 10M ham radio would be well-suited to their (illegal, and they knew it) 10m phone operation they are planning (a Y2K- emergency communications thing). Apparently, many people fearing a Y2K meltdown are thinking this way. I didn't give them the answer, but I suspect they will get an answer somewhere. And I would bet they wind up with one of these RS 10 meter radios.

The business-oriented types in RS corporate management are out to retail lots of product. This is what they are supposed to do. They are not ham police, nor are they meant to be.

Rick,

People who have responded didn't read their manuals..hi hi. The auto tuner works independently of the power setting. It tunes with roughly 10 watts. you can set the power out to 100 watts and the tuner still tunes with 10 watts. Set the power out to 5 watts...tuner uses 10.

Message-ID: <19991118214800.11292.00000500@ng-cl1.aol.com>
Source record: 94041

I have never owned a handheld HF receiver, but I am interested in getting one so that I can search for HF receptions without being forced to sit up at the desk and man my desktop unit.

While I expect that no handheld will deliver the quality of receptions that a desktop unit does, I am just seeking adequate performance for the convenience of having the hand held unit.

Two models appeal to me because of their channel capacity (1000 ch), sideband capability and price (used <$500). The models are the AOR AR8200 and the ICOM R-10B.

1. Does anyone have anything positive or negative about these units to help me decide?

2. Is there an obviously better model within the same price range as these?

Thanks for any help,

AL STERN Satellite Beach FL.

Dropped into the local RS. The PRO-94 is now $199
until Christmas Eve. It has 1000 channels and will scan
dual trunk systems. They just got in the PRO-92 as well
but it is $349 with only 500 channels but does 10 systems.

Any opinions??

I have a Kenwood TS450SAT up for auction on Ebay. It has 2
problems that can probably be corrected very easily by someone that
has the time & technical expertise. You can find it at:

I have added a Comm Spec CW id'er to one of these a few years back. I remember that the initial hook up was fairly straight forward, however, there was some issue about it stepping on a conversation already underway and I believe if memory serves me, I resolved it by disabling a transistor in the Kenwood. However its been a while and I can't remember the details.

jstrohm@texas.net wrote:

> 1. It's FAMILY radio service, not commercial. Regardless of mode,
> you can't use it for commercial service.

Not exactly correct.

From the FCC:

The Family Radio Service ("FRS") is one of the Citizens Band Radio Services. It is for your family, friends and associates to communicate among yourselves within your neighborhood and while on group outings. You cannot make a telephone call with a FRS unit. You may use your FRS unit for business-related communications. Expect a communication range of less than one mile.

FRS Rule 3 - Types of communications.

(a) You may use an FRS unit to conduct two-way voice communications with another person. You may use the FRS unit to transmit one-way communications only to establish communications with another person, send an emergency message, provide traveler assistance, make a voice page, or to conduct a brief test.

(b) The FRS unit may transmit tones to make contact or to continue communications with a particular FRS unit. If the tone is audible (more than 300 Hertz), it must last no longer than 15 seconds at one time. If the tone is subaudible (300 Hertz or less), it may be transmitted continuously only while you are talking.

(c) You must not use an FRS unit in connection with any activity which is against federal, state or local law.

(d) You must, at all times and on all channels, give priority to emergency communication messages concerning the immediate safety of life or the immediate protection of property.

(e) No FRS unit may be interconnected to the public switched network.

FRS Rule 4 - FRS units.

(a) You may only use an FCC certified FRS unit. (You can identify an FCC certified FRS unit by the label placed on it by the manufacturer.)

(b) You must not make, or have made, any internal modification to an FRS unit. Any internal modification cancels the FCC certification and voids your authority to operate the unit in the FRS.

(c) You may not attach any antenna, power amplifier, or other apparatus to an FRS unit that has not been FCC certified as part of that FRS unit. There are no exceptions to this rule and attaching any such apparatus to a FRS unit cancels the FCC certification and voids everyone's authority to operate the unit in the FRS.

For complete information, see the Commission's Rules for the Family Radio Service, 47 C.F.R. 95.191-95.194.

For general information, please contact the FCC National Call Center toll free at 1-888-CALLFCC (1-888-225-5322) or e-mail callctr@fcc.gov. For specific information, please contact the Public Safety and Private Wireless Division of the Wireless Telecommunications Bureau at (202) 418-0680 or E-mail wtbinfo@fcc.gov.

I have a brand-new Ft-90, which seems to have a similar problem. I am in Los Angeles, and experience the noted condition on strong repeaters around 449. Mhz. I have thought it might be a VCO problem, as tuning off freq by 5 khz allowed the squelch to work in one instance. However, it doesnt help on the transmit freq to be off by the same amount. What's up??

George, k9zu, Glendale, CA.

GL Al - a good buy.

I've used 2 of these for about 9 years. Check the ARRL Handbook under transmatch. Also, there's an ARRL Hints and Kinks article (12th Ed p 5-3) by K9GDF on the Murch 2000 that describes a spark over problem from one of the sheet metal screws that protrudes too close to the stator of one of the variable capacitors - cured by replacing with a shorter screw. Check the unit out for arcing and cleanliness of the roller inductor and that its not jumping turns. I added a 4-turn coil in series with the roller inductor so that one of the units loaded up better on the Higher HF bands.

Your new-to-you unit should give you a lot of good service. The guy that sold one of the units to me wanted to buy it back not four weeks after he sold it (no dice!). KW no problem. Clean every 2 -3 years or after any incident!

Hello All,

I have an Icom IC-24AT 2m/440 HT on E-bay.
It is currently at $113.49!

This is in very good condition. This does have some accessories.
It does have the optional PL Encoder/Decoder installed.
This HT has 40 memory channels. It also has a crossband duplex
feature, Also, as noted on the mod sheet, this radio may transmit and
receive on the 800 MHz range.

I also have pictures on E-bay.

Please go to:

I see in the add for the ALinco DX-77 that ALinco says it doesn't need a Narrow SSB filter as the radio has Digital Sythesis. Does this mean there is a ways to make the SSB seem or appear narrower electronically. I remeber the Yaesu FT-650 had this feature which worked Ok but not as good as DSP or a narrow filter. However, I have not anyone confirm this to me. I think the advertisment is saying that you push a button and the QRM goes away on SSB but I am not certain. ANy comments??

Al, I should also have mentioned that K9GDF
also cleaned the mechanism and lubricated
the roller's brass shaft with GC Electronics
Tunerlub, no 26-01 to reduce the sliding
friction and that eliminated his problem
with the roller jumping turns and giving wrong
read out and even getting between turns of the
coil.
Neil.

3429. Continuously Rotating antenna for sporadic-E cloud detection - info/help wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-20 00:00:00 UTC
From: N Spokes <nspokes@erols.com>
Message-ID: <8178uu$8fe$1@autumn.news.rcn.net>
Source record: 93816

The plan is to detect and record sporadic-E clouds over the US (or anywhere else for that matter) on a 24 hour time basis. Dyer (WA5IYX) and Pocock proved that FM broadcast and TV stations can be used to detect Es clouds in a 2000 mile diameter circle centered on Dyer's listening station (March 1992 QST).

I want to continuously rotate a FM/TV antenna to pick up distant (not necessarily weak) FM BC band stations (88 - 106 MHz) and low band TV (ch 2 thru 13) as indicators of sporadic-E clouds. Anyone know where I can get my hands on an FM/TV antenna rotor that can reliably rotate 360° every few minutes and give me 300 ohm feed etc.? 100 % duty cycle planned - 24/7/365. Looking for 10 year life. What are the engineering problems - signal pick off, endurance,,,, solutions, too! Rx only for now - back scatter 'radar' test a possible future development (BTW how could one do that test legally on the ham bands?)

Also I will need to record the output on tape or other medium and present the data on a scope, modified TV or video monitor. The entire FM BC band would be scanned and there would be TV channel coverage too (primarily the FM sound side). Ideas on this, too, would be appreciated. I would plan only to tape useful events to limit memory requirements. Can anyone recommend a modest cost scanner/FM radio with TV freqs, that can be programmed through a computer input for listening?

My expectation is that this would be a pilot station for a series of 10 - 20 such stations for CONUS/CON-NA-MEX and maybe 100s more stations for 'round the world coverage.

I envisage sending the data to an internet site with Es clouds plotted on a live basis along with connection to DX clusters for ham warning purposes. Doesn't seem that difficult. Also seems like it'd be a lot of fun (OK, that's where I get my kicks!)

Also, I'm looking for helpers with the design effort (zero budget endeavor - all voluntary participation). Help will be needed in every aspect - antenna engineering through to signal detection, software, display and Internet presentation.

Still looking to nail down a few details before completing the project plan. Your advice would be most appreciated. I'm aware that this system would also be a tropo propagation detector.

Thanks,
Neil, AB4YK.

PS: Anyone is very welcome to duplicate this effort in the US or any other part of the world - the more the merrier.

From: h@telerama.com
Message-ID: <3836C7DA.6BB7@telerama.com>
Source record: 93818

Hello All,

I'm selling the following radios:

Uniden 2600 10 meter mobile transceiver. Multimode-AM,FM,USB,LSB,and CW. New finals and alignment 10/98. Excellent operating and cosmetic condition. Includes DC cable, microphone, mounting bracket, knobs. Do not have the operating manual, however I'll throw in the service manual. Asking $150.00+shipping.

Standard 168A 2 Meter HT with 2 batteries. Purchased new from Jun's Electronics in August '99, seldom used and is excess to my needs. Have charger, manual, original packing and box. Paid $200.00, asking $150.00, I'll pay shipping.

While I could use the cash, I'll trade both for a low end service monitor (Singer Gersh, etc), or consider trade for exceptional vintage receiver such as a Hammarlund HQ 170, or other unique working equipment.

Thank you very much for your time.

73's,
Edward Hutton

Cute little rig, great price for a starter, but strange that it doesnt
do cw, or does it?

Source record: 93914

Looking for comments, good and bad, on this rig. I'm seriously thinking of picking one up. My primary interest is 2m SSB followed by 6m SSB and 10m SSB. I may wander into 75m SSB if I'm feeling particularly bored. Does this thing perform well on the VHF bands on SSB? Is it worth the added expense of going up to the MkII-G?

Any input appreciated.

MC

You don't have to concern yourself about hams with DF gear confronting
you, "marksman," but rather what we as hams do with the evidence we
collect from outlaw radio users. Anyone following your ill-thought advice
should be prepared to receive a letter such as the one below:

I can pick up a FT-77 in good shape for 250.00.
What was the reputation of this radio?
Any pros and cons???
I want to use for hf mobile for casual use.

RS has made the rig difficult if not impossible
(w/o lots of extra circutry) to be a non-ham
"CB + freeband" radio. That prob. loses most
nonham sales simply because these people will
want the basic CB coverage to start with and go
after the illegal frills & thrills afterward,
and not want a separate rig for non-CB stuff...

Here on the SF Peninsula (Calif.) most stores
have them on 'order only' status or poss. have
at most one in inventory. When I was trying to
find my HTX10, my local RS guy had to check
on, I think, 8 stores. Finally turned up one.

Looks like a great rig. Hope to get it on the
air when I am a little less busy. $149 = a
lot of bang for the buck.

Source record: 93919

This is a 16 channel, 4 watt, scanning handie-talkie that will cover 438-470 MHz. It will do either PL, DPL or carrier squelch on any channel and has a built-in DTMF pad.

Includes heavy-duty spring belt-clip, rapid-rate battery charger and a speaker/mic.

I can have your frequencies programmed into this radio prior to shipping.

$ 295.00 shipped

Please reply via e-mail and mention this posting.

From: "F.V. Encarnacion, Jr." <Geo_AH6BV@juno.com>
Message-ID: <%BqZ3.437$88.1272165@news.ntplx.net>
Source record: 93931

TS-830S in very good condition electrically and cosmetically. 100 - 110 watts out on all the bands. Covers 160 - 10 meters including the WARC bands. I hate to give up this radio - hot receive and a very effective RF speech processor - but a TS-940S is moving into the shack. Has the optional YK-88C and YG-455C 500 Hz CW filters, two extension feet, original box and good copies of the instruction manual and service manual. +ACQ-425 +- shipping from 06096. Radio weighs 29.8 lbs, figure on 32 - 35 lbs for package weight. Email directly (not to the list) with questions or if interested. Thanks+ACE-

I have for sale a Kenwood ts-711 two meter allmode
rig. Comes with manual, ac cord and hand microphone.
Looks and works well.

$525 shipped stateside.

It can be viewed on my web page at:

http://www.megsinet.com/~steam/hamradio.html
or I can e-mail a larger picture if you like.
If you're in the Chicago area, you can operate the rig
in my shack to check it out.

Thanks.... Mike

Hi All,

I have a nice Kantronics KPC-9612 V6.0 w/ 32k dual-port 1200 and 9600 baud tnc for sale.
This is not the PLUS model, but does support GPS for APRS. I have two of them and this one is no longer needed. Includes manual, audio cable, and box.
Would like to offer as partial trade for older KAM+ and some cash.
Or will sell outright for $125 and I pay shipping.

Email dan@truvalue.com of interested.

I am looking for a good general coverage receiver for my son for xmas.
I have been looking on ebay at Hallicrafters S38-C's and they are going
at way to high prices. I would like a radio in new or excellent
condition with good freq coverage and a BFO.
$50 price range. Can anyone make a recommendation?

Paul, KE2SI

Doren,

What mod did you do? I applied the one I found by removing the solder pad, and then done a reset. It opened the radio up for the commercial frequencies, but certaining not 800mhz..... I just tried to enter an 800mhz freq, but the CPU would not accept the key entered freq. I also tried to dial it up, but no luck there either....

DE wrote:

: idea who posted this to talk.politics.guns
:

Why I feel that most survivalist talk is foolishness, my suggest
would be to buy the Bendix King VHF-HI or UHF radios. The
Army uses them (PRC-127) as squad radios. Many of the guys
in the local Emergency Management and volunteer fire departments
have bought them as well. These units have 15 channels and
can be field programmable.

For long range communication, the SGC-2000 is a commerical
radio used by boaters, the military and others for HF commo. It
covers 1.8 to 30 Mhz. With the little work it will HF data as well.

If you would become a Ham, you might have learned this
already. That is why I cross posted it to Rec.Amateur.Equipment.

Source record: 93743

Anyone know of or done an antenna mod to the Alinco DJ-S11?
I am wondering if the antenna impedance is 50 ohms and if a connector could replace the antenna so various more efficient antennas could be used in its place.

3469. FS: Variable Capacitors

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-21 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19991121163013.03595.00000391@ngol08.aol.com>
Source record: 93746

I have the following variable capacitors for sale. Shipping (from 19087) is not included. Prices shown are asking prices for single units - let's make a deal! Shipping weights are estimates - you pay only actual shipping charges,

Cardwell JP-48-GD - Split stator variable, 48 pF max. per section. 7 rotor and 6 stator plates per section, .070" spacing. Ceramic and micalex insulation, end plates are ceramic. 3" high, 2-1/4" wide, 6" deep, with 1/4" shaft extending 3/4" from one end. Used, good condition. Shipping weight 1 pound. Asking $5.

Cardwell 7103 - Single section variable, 150 pF max. 20 rotor and 19 stator plates, .070" spacing. Ceramic insulation, end plates are metal. 2-5/8" high, 2-1/2" wide, 6-1/2" deep, with 1/4" shaft extending 3/4" from one end. Have two identical units - one NOS in original box, one used, very good condition. Shipping weight 1 pound. Asking $9 for new one and $7 for used
one. $15 for both.

500 pF Cardwell transmitting variable - Single section variable, 500 pF max. 25
rotor and 24 stator plates, 1/32" spacing. Micalex insulation, end plates are metal. 2-1/8" high, 3" wide, 4-1/4" deep, with 1/4" shaft extending 5/8" from one end. Used, fair condition. Shipping weight 2 pounds. Asking $5

450 pF Hammarlund transmitting variable - Single section variable, 40-450 pF. 24
rotor and 23 stator plates, ,070" spacing. Ceramic insulation, end plates are metal. 3-1/4" high, 4-1/2" wide, 7" deep, with 1/4" shaft extending 1-1/2" from one end. Used, good condition. One of the four ceramic insulators that hold the stator is chipped, has no effect on operation. Shipping weight 3 pounds. Asking $12

The following 3 units are all similar in construction, but vary in details. All are high quality military surplus unit - beautiful construction, but manufacturer and source unknown.

3 gang precision receiver tuning capacitor - 3 sections, each with 7 rotor and 6 stator plates, each section approximately 10-65 pF. Rotor plates on ends of each section are slotted for tracking adjustment. Each unit is shielded from the others, and has its own independent rotor wiper and connection. Rotors are not electrically connected to frame. Rotor shaft is ceramic with metal sleeves, stator insulation is ceramic. Ball bearings, very smooth and low torque. 3" high, 2-1/4" wide, 3-1/4" deep, with 3/8" shaft extending 7/16" from one end. Shaft has metal sleeve on end. Used, very good condition. Shipping weight 2 pounds. Asking $4.

3 gang precision receiver tuning capacitor - 3 sections: Front and middle section each have 6 rotor and 5 stator plates, approximately 10-55 pF. Rear section has 7 rotor and 6 stator plates, approximately 10-65 pF. Rotor plates on ends of each section are slotted for tracking adjustment. Each unit is shielded from the others, and has its own independent rotor wiper and connection. Rotors are not electrically connected to frame. Rotor shaft is ceramic with metal sleeves, stator insulation is ceramic. Ball bearings, very smooth and low torque. Each section has integral air trimmer capacitor, 3 rotor and 3 stator plates, approximately 15 pF maximum capacity. 2-1/2" high, 2-3/4" wide, 3-1/2" deep, with 3/8" shaft extending 5/8" from one end. Shaft has metal sleeve on end, and 1-3/4" diameter brass gear (easily removed). Used, very good condition. Shipping weight 2 pounds. Asking $5.

3 gang precision receiver tuning capacitor - This unit is actually two capacitors bolted together and driven through a set of anti-backlash gears. One side has 2 sections, the other only one. All 3 sections have 9 rotor and 8 stator plates, approximately 12-90 pF. Rotor plates on ends of each section are slotted for tracking adjustment. Each unit is shielded from the others, and has its own independent rotor wiper and connection. Rotor shafts are ceramic with metal sleeves, stator insulation is ceramic. Rotors are not electrically connected to frame. Ball bearings, very smooth and low torque. Each section has NPO 3-12 pF ceramic trimmer, easily removed if not wanted. 2-1/4" high, 4-1/2" wide, 3-1/2" deep. Drive is via 3/16" idler shaft - brass gear doubles as shaft coupler. Used, very good condition. Shipping weight 2 pounds. Asking $5.

--

Big old 3 gang BC tuning capacitor - This is an ancient unit, origin unknown. Rugged heavy duty construction. Front and middle sections have 13 rotor and 12 stator plates, 20-450 pF. Rear section has 16 rotor and 15 stator plates, 20-500 pF. 2-3/4" high, 3-1/4" wide, 5" deep, with 1/4" shaft extending 1-1/2" from one end. Used, dirty and dusty, but tests good, bearings are smooth and can be cleaned up. Shipping weight 2 pounds. Asking 25 cents, or free with any order.

I have one that I don't need, working with original manual, but in bad external physical shape (some corrosion). Since it's a pretty basic supply design, might I suppose it's the case that interests you (to match the HW8)?

Good point, I'm a new ham and for my first rig I'm looking at either ICOM IC-746 or Yaesu FT-847, mostly because of the HF+6m+2m+70cm coverage. I really like IC-756's spectrum analyzer, but it only covers HF&6m. Is this a major shortcoming? Or would I be better off buying a separate 2m/440 dualbander?

IC746 also has a spectrum analyzer, but its dot matrix display looks short and coarse and not very useful. This is from a newbie looking at on-line pictures, so it's probably not accurate at all. Any comments?

Message-ID: <81a63f$cu7$1@bgtnsc01.worldnet.att.net>
Source record: 93771

There are two squelches. one for Narrow FM (NFM) and one for Wide FM. Some parts of the bandplan default to WFM. So if you are setting the SQL, it will have no effect. You need to set the WSQL. Or more likely, change RMOD to NFM because that probably what it should be anyhow (sometimes the stock bandplan leaves a little to be desired in these defaults.

From: R2D2
Message-ID: <81a7jd$7c9$1@nntp6.atl.mindspring.net>
Source record: 93773

As I recall, the PCB oil had a better power dissipation time when tuning up the transmitter and the amplifier. It would run cooler for a longer period of time than the mineral oil. But, I think I would go to the power company and let them dispose of the PCB oil. Mineral oil is much safer. 73's KA1BS, Roy.

3499. FS Icom dual band ht

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-21 00:00:00 UTC
From: Joseph Schulte WA8UET <schulte@bright.net>
Message-ID: <9v2_3.105$sB4.3651@cletus.bright.net>
Source record: 93776

I have an Icom dual band ht for sale. Model number is IC-W2A.

It comes with a BP-90 battery pack which is a 7.2 volt pack with replaceable nicad cells.

A base stand BC-35 base stand battery charger comes with it, however, you cannot charge the BP-90 pack using the basestand charger. Any other Icom packs for this ht can be charged using the base stand charger.

An MFJ speaker mic comes with it. Model number MFJ-285W.

I also have a brand new touch pad and front cover for it which you may wish to install to make it look "like new" or keep it untill you are done using the ht and then put it on it when you sell it.

I will have a picture up that you can look at it at the following location as soon as I can get my ftp program problem resolved.

http://www.bright.net/~schulte/icom/icombest.jpg

The price is $225 and includes insurance, shipping and tracking. Checks will be held 7 days to make sure they clear and money orders will be shipped ASAP.

If you have any questions or are intersted please contact me at schulte@bright.net

Thank you, Joe WA8UET

3500. Any HTX-400 mods?

Looking to trade one gently used Alinco DJ-X10(T) (the cell-blocked US version) for a good condition 2 meter all-mode transceiver (will also consider a 6 meter all-mode). Included with the radio are some extras:

1. two extra antennas (RS w/loading coil and a Diamond RH77CA)
2. REGISTERED version of the Bruce Pope software
3. Programming cable and adapter for the radio

I have all manuals and boxes for the radio and it is in very good condition. If interested, please contact via e-mail. Thanks!

Message-ID: <sqJZ3.40118$oa2.227895@iad-read.news.verio.net>
Source record: 93827

Hello and thanks a lot for reading. I'm considering buying a Ten Tec 253 auto-tuner and am wondering if anyone could help me with any of the following general questions:

1. Will it handle 1500w (or more) on SSB/CW from 1.8-30 MHz (even during hours of operation such as in contests)? Will it handle RTTY or tune the WARC's at full power?

2. What does the internal meter read? Does it read both wattage and SWR?

3. About how long would it typically take to tune a load (assuming the load is around 2.5/1 starting out)?

4. I've heard that the RAM can only be rewritten over 10,000 times. What exactly does this mean and how could I replace it if it went bad?

5. What are some common problems associated with this tuner?

6. If you have owned one, what are your likes and dislikes? Any tricks of the trade or operational suggestions?

7. Is there anyway to build/buy an external control box so that I can switch between all of the memory channels manually through one switch? Or can I only have 7 per antenna output?

Please let me know if you can be of any help on any of the above queries. Thanks a lot and best 73.

> Why I feel that most survivalist talk is foolishness, my suggest
> would be to buy the Bendix King VHF-HI or UHF radios.

And this is exactly why the poster didn't ask anyone in a HAM newsgroup. I suggested a very small handheld (

> The Army uses them (PRC-127) as squad radios. Many of the guys
> in the local Emergency Management and volunteer fire departments
> have bought them as well.

And what does that prove? Not much. The PRC-127 is very limited in it's capabilities. Yes, they are rather rugged, but for a survivalist, the VX5 (which I recommended to the original poster) is much, MUCH better.

> These units have 15 channels and can be field programmable.

And the VX5 has 220 channels and is field-programmable. Looks like the PRC-127 falls a little short (about 205 channels short to be exact).

The VX5 can accept headsets or handsets but needs none. . .IIRC, the PRC127 must be used with a head or handset.

The VX5 (with it's Lithium Ion battery) puts out 5 watts of Tx Power. . .the PRC127 only 3 with it's inferior NiCad battery.

Oh, and speaking of batteries. . .I am currently unaware of any method to recharge those NiCads in the field, say through a solar powered battery charger (something a "survivalist" may take into consideration). I am also unaware of an AA alkaline battery pack for the PRC127 (which, BTW, the VX5 does have). . .but to be honest, I do expect there to be one out for it what with the military's switch over to AA only.

You see, a person who is preparing for an extended disaster needs to do away with strict convention. He or she cannot expect a limitless resupply of parts and consumables as does the military. He or she cannot count on the myriad of exotic methods used to replace things like batteries, ammo and food. Therefore all of the tools that this person takes with them must be carefully thought out to provide the maximum advantage in the smallest package.

The Yaesu can accept NiCad AA batteries which are recharged through an inexpensive ($20) solar recharger.

Even Better, I can take almost any battery (AA, B, C, D, 9-volt, prismatic, etc.), spend less than 5 minutes and have it working through the external DC port. Oh, I can also run the radio off any automobile cigarette lighter. . .how exactly do you do this with a PRC127? What's the NSN for the cigarette light adapter or the AC adapter?

Also, the Yaesu VX5 is not limited to a very small Tx/Rx range (The PRC127 is limited to the 136 - 160 MHz). The VX5's Rx Range is :0.5-15.995 MHz, 48-728.990 MHz, and 800-998.990 MHz. The VX5's Tx Range is 50-54 MHz, 144-148 MHz, 430-450 MHz. All of these are before any modifications are done to the radio. That sound a lot wider than the PRC127, now doesn't it?

Oh, can the PRC 127 receive any of the following :

NOAA Weather Reporting Stations?
AM and FM radio Stations?
Police Bands?
Business Bands?
TV Sound?
Commercial Shortwave Broadcasts?

Can the PRC127 do a VFO or Memory Scan?
Can the PRC127 give you a temperature reading?
Can the PRC127 give you a barometric pressure reading not only for the time you need it, but also keep track of the last several readings to tell you if the pressure is rising or dropping (something a "survivalist" may want to know as it can indicate oncoming weather fronts)?.

The VX5 can. And do it for around $400. What's the PRC127 running for right now? (I truly don't know).

Why would a "survivalist" need all these things? Simply because they may be interested in receiving as much information as possible without lugging around 2 or 3 different radios. If the power goes out in your neighborhood and the TV doesn't work. . .you can turn on your VX5 to the TV sound freqs and hear updates. . .or go to the local AM news station for the same (AM stations can still transmit from the most basic of remotes. . including a gas-powered generator). . .is this a capability shared by the PRC127? No.

If the power is out to the radio and TV stations, can the PRC127 scan police and fire freqs (most police departments have a generator backup for their base stations and vehicles have a built-in recharger for handheld police radios, so power is seldom a problem for them) for updates on any situations which may endanger the "survivalist's" life? No.

But the VX5 can.

Better yet, can the PRC127 get onto the local HAM radio net to listen for arising problems? Probably not, but this depends upon the freq of the local net, now doesn't it? The VX5 will have no problems, though.

Can the PRC127 do packet radio? I hesitate to answer "no" immediately to this as there is probably a way to do so. I do think that you can encrypt the 127's transmission with a KY set, but am not sure about packet radio.

BTW, I do know that you can encrypt the VX5 (*Please note : this is an illegal modification to the radio) using one of Transcrypt's DES boards AND can do packet radio quite easily with or without the (illegal) encryption mod.

Now, there _are_ downsides to the VX5 as a tactical radio. First off, you'd better make sure you lock the keypad out before moving around with it. Even the tiniest bump may change your settings. Also, fully waterproof tactical headsets can be expensive (I have a set of Eagle conduction headsets that cost me over $350 apiece. . .but I've been using a cheap set-up (earplug and handmike in a waterproof pouch) for a while now and it seems to work rather well. . for a lot less than $350 (total cost was about $30).

Also, the backlit display may light up (if you haven't programmed the settings to do otherwise) during either Tx or Rx. . .possibly a danger at night. At least the backlight is a muted red instead of a white, yellow or green.

The VX5 is very rugged, but I would doubt that it is as rugged as the PRC127. I would have no compunctions about swimming with a 127, but I'd want to put my Yaesu in a waterproof baggie if at all possible before I swam with it for any length of time.

> For long range communication, the SGC-2000 is a commerical
> radio used by boaters, the military and others for HF commo. It
> covers 1.8 to 30 Mhz. With the little work it will HF data as well.

Well, I'm unfamiliar with the SGC-2000 unless you made a typo and mean the SCG-2000. But the SCG-2000 is a good radio, too. A bit large and expensive for the purpose.

> If you would become a Ham, you might have learned this
> already. That is why I cross posted it to Rec.Amateur.Equipment.

Who says that I am not a HAM? Do not assume that I am not. Besides, why would I want to post my real name so that I can be tracked back down to my address, etc?

Do you live in West Lafayette, Norwich or Sebago Lake? Which is your middle initial : A., L. or T.?

So you see, Greg (if that is your _real_ name), these reasons are probably why the original poster didn't want to ask a HAM group. HAM groups, just like most other narrow-topic groups, tend to have a rather myopic point of view when it comes to recommendations for a specific item's appropriateness for a preparedness scenario.

You would have this person spend money and potentially risk their life on a piece of military equipment that is extremely limited in it's abilities. Yes, the PRC127 is a good radio, but it is not necessarily an appropriate radio for a "survivalist" to use at the exclusion of another. "Survivalism" is not about running around in cammies, toting assault rifles and conducting a movement-to-contact with spikey-haired mutants (or Federals), despite what the media would have you believe.

And while you will probably take an offense at many of my statements, I ask you to honestly look at the arguments I've posted. If you can find fault with them, then please do so.

I remain,

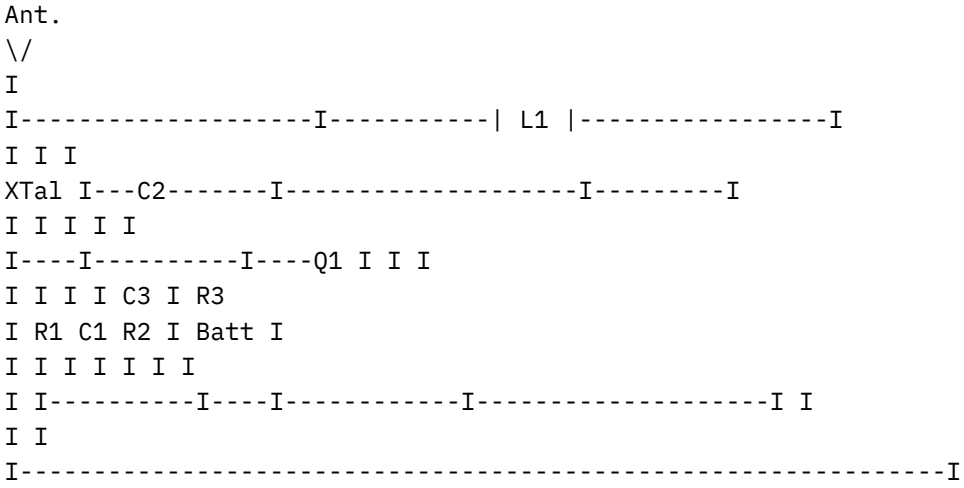
Hi everyone,

I need some help. My question may sound stupid for radio users, but I hope you will answer the following question. I have found the circuit of a device capable sending on the american walky talky band (49.8XX Mhz). That's pretty cool, but since I live in switzerland, have some problems in finding such an american walky talky and don't want to send on maybe "prohibited" freqs, I asked myself how I could change the circuit in order to send on the 27 Mhz CB band. Now my question is the following: is it possible, what changes should I do or is there somewhere a circuit in the internet that sends a signal on the 27 Mhz band?

The circuit is the following:



Q1 = 2N222 transistor
C1 = .001 MFD, 50 Volt disc capacitor
C3 = C1
C2 = 90 pf trimmer capacitor
R1 = 10k ohm, 1/2 Watt
R2 = 470 ohm, 1/2 Watt
R3 = 47k ohm, 1/2 Watt
L1 = 2.7 MH mini choke
S1 = SPST mini switch
Batt = 9v.
XTal = A XTal in the 49 MHz Band

Thank you very mutch in any case.

Sent via Deja.com http://www.deja.com/
Before you buy.

3532. Re: Continuously Rotating antenna for sporadic-E cloud detection - info/help wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-21 00:00:00 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <3837DC6F.95BF683C@erols.com>
Source record: 93847

With respect to the continuous rotation (and transmission line), you will need a rotary joint. Rotary joints are used primarily in radar systems, inasmuch as the antenna turns (generally) continuously, or at least beyond 360 degrees in the horizontal plane. RJ's also may have additional "slip rings" to allow for control circuits (power and servo data for positioning). I have never heard of a 300 ohm rotary joint, so you may want to consider using 50/75 ohms, etc. and transform after the joint. HyGain used an RJ in their large HF log periodic antenna arrays. One possible source may well be a surplus dealer who handles heavy military electronics. From experience with the procurement of RJ's, new ones cost from $3000 and up, depending on frequency and number of slip rings. Good luck with your endeavor.

Was that a dealer ad? AFAIK, Alinco doesn't make that claim. The DX77
has no feature quite like that... At least mine doesn't. It has three
filter bandwidths, selected by the mode and operation of the wide/narrow
function, and IF Shift, but thats about it.

Check out the manufacturer's info at www.alinco.com. Also QST reviewed
the radio in June 1998.

Overall an excellent radio for the money, but no instant QRM-Away
feature, sorry.

Source record: 93868

> A similar station exists somewhere on the east coast.

That would be NAA in Cutler, Maine.
13 towers that are least 800 feet tall on 715 acres.
396,000 feet of wire for the antennas and 13,000,000 feet of wire for the ground system.
2,000,000 watts output power.
I visited that site during a vacation and it was most impressive.
The gate guard told me that a chunk of ice fell from one of the antenna wires and practically split a misplaced jeep into two pieces.
Tours are not available for curious amateurs :-(

I would recommend the book
The world below 500 kilohertz by L. Peter Carron, Jr.
ISBN 1-882123-00-X
for some antenna specs.

Message-ID: <383824E3.524A0BDE@calweb.com>
Source record: 93874

I have thought about making a rotary joint for that frequency range.
My design would use two "cup" style transformet cores and suitable
windings to make a transformer. The two halfs would be held in
contact but would be free to turn.

Never did explore this any futher.

Bill K7NOM

D. S. Platt wrote:
>

I know of a few guys out here where I work that have such equipment for you. They work at the bases' DRMO (Defense Reutilization Management Office (I think thats what it stands for)). All kinds of crap. Mobile radar rigs, stationary rigs, small and huge. All of the equipment gets sent off to Fort Irwin, CA for auctioning off.

Sometimes I wish I was a HAM so I could join you in your research project. Well, next month I'll try for my No-Code and go from there.

Go to the arrl site, and read the Web Extra column in the members only
section, there is a preliminary evaluation of the Ten-Tec Pegasus. As you
might expect, you get what you pay for.

Source record: 93889

QST just did a preliminary review of the radio on the ARRL MEMBERS ONLY
WEBSITE. Basically the Ten Tec has the reciever of a Kenwood TS-50 or Alinco
DX-77T. IT is the same receiver as in the
$300 vurtual radio they sell. Ten Tec just added a RF deck and etc to it. Still
not a bad deal for the $ but NOT the Kachina radio you were mentioning

3578. FS: Kenwood TS-830S $425 + shipping

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-22 00:00:00 UTC
From: "F.V. Encarnacion, Jr." <Geo_AH6BV@juno.com>
Message-ID: <Sa4_3.462$88.1395838@news.ntplx.net>
Source record: 93643

TS-830S in very good condition electrically and cosmetically. 100 - 110 watts out on all the bands. Covers 160 - 10 meters including the WARC bands. WARC transmit not yet activated. I hate to give up this radio - hot receive and a very effective RF speech processor - but a TS-940S is moving into the shack. Has the optional YK-88C and YG-455C 500 Hz CW filters, two extension feet, original box and good copies of the instruction manual and service manual.

425 US Dollars plus shipping from Windsor Locks, CT 06096. Radio weighs 30 pounds. Figure on 32 - 35 pounds for for package weight.

Email me direct (not to the list) with questions or if interested.
Thanks - George

3581. IC-706MKIIG Modification

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-22 00:00:00 UTC
From: wehrme@my-deja.com
Message-ID: <81b708$na7$1@nnrp1.deja.com>
Source record: 93646

Hi All,

I am looking to wide-band my radio. There seems to be a couple different modifications posted. I have a couple questions:

My reference IC chip is labeled 4052C-9498. Mod mentions 4052C-8713... is this the same chip?

Also one mod mentions to locate 11 solder pads that runs vertically aligned when reading the number off the chip, and says to remove diode D.2030 which is the tenth diode in this string.

My question... I have the 11 solder pads, but only 1 diode is mounted in this string, which is the tenth diode. Are there supposed to be other diodes mounted? I would have thought the mod would have read "remove the only diode". instead of removing #10.

Can someone who has actually done this please reply.

Thanks and 73

Okay. That's strange. I've broken more PRC77's and 68's than you can shake a stick at. I even broke some of the Sabre's and Satcoms (though the earlier models of the latter were rather delicate).

> It would only good for short term emergencies. Not not for the "end of the world"
>situation that you suggest.

Who said anything about TEOTWAWKI? The original poster mentioned a radio for a Y2K scenario. In my personal opinion, Y2K will not be a TEOTWAWKI scenario. It may end up being something where a person needs to receive as much information as possible to keep abreast of the situation.

Look, bud, I don't know where you get this idea that all survivalists are preparing for the end of the world, but we're not. Many of us are preparing for life's little bumps.

And exactly why will I need high-power, long-distance communication? To whom, exactly, am I going to speak? Transmitting my location in a TEOTWAWKI situation would probably be counter-productive (yes, I'm fully aware that a receiver can be found even when in Rx mode).

Oh please. Sir, if you hold more heat than the three blankets I wore (last one being the nifty little green color that you get when you complete JFK-SWC and earn the 18Bravo designation (with both the W8 -and- W9), then lay your credentials on the table. I'd be willing to swap my DD214 with your 201 file anyday of the week. Just tell me who and where your CO is and I'll have my VFW commander drop him a line to prove I am what I say.

And modifying a radio to receive cell freqs is one of the most basic mods around. Both my Yaesu FT50 and VX5 do it all day long. Anyone with half a brain and a soldering iron can do it with instructions found right here on the net.

I'd bet you're probably one of the 98-series guys, aren't you? I had a ditty-bopper that was originally a Level 2 98Charlie. He was one of the flakiest guys I've ever known. Dude could do some serious shi* when it came to commo, though. He, too, had a high opinion of himself. But you don't sound as if you've been through DLI, so let me guess. . .you're with the NRO and are attached to a military unit. . right? Please.

. . .snip. . .

>

What in the hell are you talking about?

You are offended because you think that I feel the world is coming to an end?

To begin with, I never said anything about the End of the world as we know it. YOU did.

And then you go on to say that you will fight me because I am willing to ". . .destroy our nation. . ."

NOW who's being paranoid?

I defy you to find one statement where I even mentioned a desire to overthrow, assault or otherwise topple the federal government (I did make a comment about overthrowing Illinois. . .but I consider that to be a third-world country. .

.Chicago most especially. . but then you are somewhat familiar with Illinois being from a place not too far from the border, aren't you?).

> Your fear is more dangerous than what you fear. I just would
> not go to the extremes that you have. However, within that
> context, you are well prepared.

What extremes? A guy asks a question about a radio and now I'm an extremist because I recommended he get a HAM radio? Dude, you've been playing around the electricity too much.

If you think putting away some food, water and other supplies is extreme, then perhaps you should stick to decaffeinated and stay away from newsgroups such as misc.survivalism from whence this thread originated.

> I have too many within the military that are just as scared as you. My answer
> is that it seems that you do not trust God to save us or you think that God
> will turn his back on us (Rom. 8 would suggest otherwise).

No, I don't EXPECT God to save us/me. I think God expects me to do as much as I can to save myself. If I am willing of spirit and body, then He will assist me. I'm not a Lazy Christian who believes that just because I go to church on Sunday I'll be admitted to the Pearly Gates.

Look dude, I don't know what stuck in your craw, but the fact is that we're going to just have to agree to disagree. This is turning into little more than TROLLING bait with your rhetoric. If you want to discuss the pro's and con's of one system over another, then fine, let's go. Otherwise, as far as I'm concerned, you can have the last word. Feel free to tell the world about what a paranoid, delusional and clueless heathen I am.

Too bad, too. I would have loved to discuss some of the current trends in military communication, seeing as West Lafayette is only about an hour and a half away from my home.

Ah well.

3589. Uniden HR2510 off freq ???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-22 00:00:00 UTC
From: Kevin <kpevin@mediaone.net>
Message-ID: <Ng9_3.1241$2a.111987@elnws01>
Source record: 93654

Hi all,

I just picked up a little 2510 uniden to try some mobile DX on 10m now that the band is open and it appears that the RX and TX are off about 100 cycles on SSB. The clarifier had been modified to work on TX as well as RX. Is there a simple way of aligning this? If not I will have to unmod the clarifier, but the 100hz tuning steps plus RIT only makes tuning SSB a little rough for me so I'l like to keep the clarifier on RX/TX.

73,
Kevin

On the more affordable side-

Find an Alliance rotor, the kind you put the antenna mast through.
There is someone now selling an equivalent to these now. I don't know
of any 300 ohm rotary couplers but their are some 50 ohm. Their was an
article in 73 Today magazine that someone did this for DFing and made a
rotary coupler.

I looked it up on a site for you and # 10 is the only diode on that string.
The site was Http://www.mods.dk. There is a diagram there as well. This is
one onf the best sites on the net for mods. Just click on the Icom Button and
wait for the list to load up. It is listed as IC 706 and the mods for the whole
series of radios are ther as well.
Good luck,
Sandor Wetsel Kg4fet

3594. Yaesu FT-50 repeater shift problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-22 00:00:00 UTC
From: jon_adair@my-deja.com
Message-ID: <81bnv8$34i$1@nnrp1.deja.com>
Source record: 93659

This weekend, I saw a problem with the FT-50 that I thought people should be aware of. A friend bought a new FT-50 at a hamfest and started programming in a repeater into a memory. But the repeater shift on 2 meters was strange. It was set initially to 2.68 MHz. So I pop into the shift menu item and start dialing it down. But when I get near 0.60, it won't go there. It's going in 0.05 steps, but it's off by 0.03 from what it should be. So I can set it to 0.53, 0.58, 0.63, etc.

The Yeasu rep was stumped. We reset it a couple times and the best we could get was to have it off by 0.04 (so it would step 0.54, 0.59, 0.64, etc.).

Luckily, Rod from RT Systems (http://www.rtsars.com/) was there and he knew right away what we were talking about. I guess it's a known defect that he had seen before. He swapped it out for a new one on the spot. (That's yet another reason they get all my new radio business.)

So if anyone sees this with a new FT-50, apparently there is no fix for it and it has to go back to Yaesu.

William F. Hagen (whagen@inreach.com) wrote:
: Cute little rig, great price for a starter, but strange that it doesnt
: do cw, or does it?
: kc6ufe

Bought an HTX-10 a bit over a week ago. A few initial impressions:

- Nope, no CW. Too bad, but I suspect most will be used mobile, so
not a fatal omission. I suspect a CW hack will come along in due course.

- A bit user unfriendly w/respect to tuning while mobile. The
minimum scan/mike tuning increment is 1 kHz. You have to jigger the fine
tuning (tx/rx -- NOT an RIT) knob for anything more precise. The HTX-100
was a lot better on this score.

- The manual leaves a lot to be desired. Still, you'll figure out
everything you'll need to know to operate and program the rig in five or
ten minutes.

- General impression that, although seemingly solid, the rig is
built on the light side (especially the mike). Durability may turn out to
be the big issue with these radios. We'll see.

- The speaker is at the bottom of the enclosure. Thus, some mobile
installations will benefit from an external speaker. R/S has a couple of
adequate choices for about $15 a pop.

- Good performance, so far. I have yet to try the AM and FM
modes, but plan to once I mount an antenna cut for the high end of the
band. Good reports on SSB, but I'll echo the previously-posted caution not
to advance the mic gain much past the 1 o'clock position (the manual sez
fully clockwise).

- The NB seems adequate, if not great.

- If it stands up to routine mobile use through the balance of
this cycle, it will have been a pretty good bargain for < $150.

- I wish they'd made a companion HTX-6. I think R/S missed a bet
there.

73,

Mark -- WA9ETW

3601. Re: Continuously Rotating antenna for sporadic-E cloud detection - info/help wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-22 00:00:00 UTC
From: N Spokes <nspokes@erols.com>

Source record: 93666

Thanks for your contribution, Ipo.

There's absolutely no need to be a ham for this SWL effort - I plan to use a computerized system strictly to listen to single or multi-hop FM broadcast band and TV transmissions reflected by the ionosphere. The first signals would, I expect, come from a circle with an inner radius of 700 miles and an outer radius of 1400 miles; double hop would be 1400 to 2800 miles and three or four hops would get across the Atlantic from here to receive signals from Europe - 3000 to 4000 miles away. I'd love to have you participate from your location wherever it is. The idea of radar back-scatter reception of a ham radio transmission is a frill and not at all necessary for the important part of the project.

Basic requirements are to put up an antenna and listen - for a long while!! That's where the engineering comes in. You don't want to be stuck listening to the receiver for ever while nothing is going on (most of the time). Under sporadic-E conditions, the system will come alive for a few minutes, an hour or two, maybe hours every day for an entire summer. But, maybe nothing much during the equinoctial months typically during March/April and October/November, then a bunch of more lively dates in December/January again. We need all the help we can get to help listen - anywhere in the world any time of day or night. There's next to no information on night time (midnight to 7 am) sporadic-E.

May I put you on my E-s mailing list, Ipo? BTW, if you go for the ham license, it's interesting to note that the Technician no-code license gives you lots of VHF privileges - with far more power than the novice with his CW capability gets on the HF freqs.

Cheers! Neil.

Bill, et al...I just got off the phone with Yaesu tech support, here in LA. The tech had me reset the computer, and the problem went away. He said that perhaps a wrong value had snuck into a register for one of the local oscillators, and had thrown it off freq just a hair. The reset goes like this: turn off the radio, depress both arrow keys and the disp/ss button, and power up. This takes it back to the basics, including wiping out all your memories, but it does solve the problem!!

good luck, 73 Geo.

The TX frequency is set by VR-111, which is located near the front right side of the main circuit board. If you also need to center the opened clarifier, connect a frequency counter to TP304, center the RIT, set the rig at 28.0 mhz AM, and adjust L318 for 38.695 mhz.

TP304 is located on the near the front right edge of the PLL board.
L318 is located near the rear right edge of the PLL board.

Hope this helps.

Hi Karl,
If you look in the ARRL Handbook, I got a 1999 cheap from a rally.
There is a "trio of transceiver computer interfaces" on page 22.46.
The interface uses a MAX232 chip.

Hi Dan,

It appears that after the clarifier was locked VR111 isnt in circuit any more, if I put the clarifier back to stock VR-111 works again. I think I will just have to live with it and tune everyone on the tinny side so I sound OK to them of just put the clarifier back to stock - which is a real pain if you forget and the RIT is off a bit. I found complete alignment insructions here: http://members.tripod.com/~Rogerbird/ which may come in handy for some.

Thanks and 73,
Kevin

When I moded my 2600, it was off by about that amount. It was due to the
way I did the mod.
I eliminated one diode forward voltage drop, causing a slightly higher
voltage to go to
the varactor. I never bothered to fix it, as getting to the proper points
in the circuit
would have involved a lot more dissasembly.

Wait, there is more...it turns out that the 440 band will show squelch problems if you have reset the STEP function to other than 25 khz. This shows up in LA as we have a new band plan. I had reset mine to 5 khz, which seems to be tied to the squelch somehow. I have communicated this to the yaesu phone tech line, and will also email them.

I have a FT-301D, also, so I'm interested in the availability of spare parts.

I checked TI's web site (www.ti.com), they are obsolete. However, by following the "status" link on TI's site, I found that Rochester Electronics sells TI's obsolete stuff (www.rocelec.com).

It appears that there are some in stock, but I didn't ask for a quote.

3617. Power Supply Problem w/ FT101 Yaesu, anyone?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-22 00:00:00 UTC
From: Wes <wesleys@ix.netcom.com>
Message-ID: <3839AF40.CEAC0713@ix.netcom.com>
Source record: 93682

Anybody else have a power supply problem w/ an FT 101 series Yaesu?
Just wondering if there are any common problems, to save myself some
time troubleshooting.
I would appreciate any ideas. It was working fine, and suddenly,
while just receiving, started sizzling & smelling like hot varnish.

Best Regards,
Wes.

3618. Re: What do you think of the Radio Shack HTX 242 Two Meter?

Newsgroup: rec.radio.amateur.equipment

Well, what mods would you want for the HTX-242??

Full CAP and MARS TX? Remove one resistor.

Full TX capability? (If it tunes it, it will try to TX it!) Remove
a different resistor?

Other than that, not much more to do....

Mike

Have Yaesu FT 1000D transceiver for sale - This very special radio is like new in all respects. Price $2,500. New cost is $4,200. plus tax. Used less than 100 hours. Moved to Mobile home park and can't put up a decent antenna due to restrictions. Hand mike is included in the price.

Also have the matching speaker, 1 Heil boom mike headset, 1 desk mike with two elements for both normal and dx speech. and the JPS ANC-4 noise limiter. These items are also attractively priced.

Paul Babcock 619-442-2608 or e mail at kd6aw@home.com

3622. Re: What kind of HF rig to buy

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-22 00:00:00 UTC
From: Leland Van Koten <vankoten@home.com>
Message-ID: <3839C839.64CEB06A@home.com>
Source record: 93687

I don't have personal experience with either of these rigs, and am thinking about one of them myself as a replacement for my Icom-735, which I feel that I've finally "outgrown" after 8 years of use. I thought I'd offer my 2 cents on the spectrum scope issue.

I've always been fascinated by rigs that offer a spectrum scope, but from hams I've talked to that have rigs that include them them, they seem to be more useful in theory than in practice. It takes a fairly strong signal to show above the noise level, and while they're good at telling you whether there's SOME activity going on, you can find that out by spinning a dial just about as easily.

The big difference seems to me to be whether adding 2 meter CW/SSB is worth the decrease in receiver performance (especially dynamic range) that comes with the 746. Either probably has an adequate dynamic range for routine operating, but my experience working the Sweepstakes last weekend convinces me that I want a receiver with the best dynamic range I can afford. In fact, the 735 is a perfectly adequate rig for routine operating and has served me well, but operating a contest with it on a crowded band is a frustrating experience. It didn't keep me from getting the sweep, but pulling a weak station out of all the splatter when the lower bands get crowded isn't fun.

So my bottom line would probably be think about whether you're more likely to be doing significant contesting or other working in crowded conditions, as opposed to operating 2 meter SSB/CW, and make your decision accordingly. I've about decided to either get the 756 (which seems to have a much better receiver than anything else in its price class) relatively soon, or save my pennies for another couple of years and get a 775 (or its successor, by the time I can afford it).

3623. FS:Hy-gain "Hy-Tower" model 18-HT for parts

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-22 00:00:00 UTC
From: N0SAH <n0sah@prodigy.net>
Message-ID: <81ci1u$2gcu$1@newssvr04-int.news.prodigy.com>
Source record: 93688

FS: Hy-gain Hytower, model 18-HT for parts. Included are
the 3 main tower sections, with minor rust. The tripod insulated
base. The "stinger" portion of the antenna has apparently been
broken off. There is a portion of it still bracketed in the top section
with the u-bolts. The stubs for 10-15-20-40, seem to be intact, but
the some of the brackets that hold them to the tower are missing.
Price is $50 and this is cash and carry only from Kansas City, MO.
If you have any questions, just email me. I will be happy to answer
any of your questions that I can. Also a copy of the manual.
Thanks

I have the USA version. My MH-31 has it also, and my book makes no
mention of it's function..

I notice that every mike plug pin has a common function :

1-up, 2- +5V,3-down, 4-fast, 5-gnd, 6-ptt, 7-mic gnd, 8-mic

Doesn't leave anything available for any other function.

Strange.

I just sold my Kenwood 850 to go to a 570. Accordingly, I no longer need
the IF-232C. It will work with the
850 and probably the 950 and 450 as well. It comes with box, paperwork and
cables. I would have described it as
mint, however, there is a small scratch on the top about an inch from the
back about an inch long and the width of
a human hair. $75 plus insured postage (Probably an additional $7 or so).

I'm looking for a recommendation for a good HT radio. I got my technician license in 1991 but have been out of the hobby since then. I would like to get a durable radio with good features that I and my daughter can enjoy. I never had a radio so this will be my first one.

Any opinions will be greatly appreciated.

Thanks

Gentleman,

The switch on the rear of the mike performs a tonal change.... one position for fm type (arm chair) copy... the other for DX-ing. It's not a radical as a HC-4 HC-5 perfomance but is noticable to the trained ear.

Yes there is, clipping a diode will expand the transmit freq to warc and marine bands. See the Kenwood ftp site for mod info. Basically you have to open up the rig and seperate the boards to get at the diode about 30 min work.

Source record: 93699

Properly tuned and with the 6360 tube (not the solid state plug in module), they can be made to sound very good on AM. Expect no more than 35-40 watts, however. Just enough to drive a grounded-grid amp...

the radio absolutely cries for a D-104 mic (the TUG-8 base with the germaniums).

Don't waste your time on ten meters, though. The finals (6js6c) start to crap out at 21 MHz.

Finally...consider replacing the relays with diode switching. The old musen relays die quickly!

Icom IC-701
Full power on all bands 80-10 (no warc)
All solid state construction
Digital tuning
USB/LSB/CW/CW-Narrow
With 2 hand mics and manual
VOX switch needs repair, otherwise in good condition

PLUS-
MFJ 941B antenna tuner in good condition + cables

PLUS-
GSC 10 amp power supply in good condition

All for $300 + shipping (Probably about $20--the rig and PS are heavy)

This rig is surplus to my needs, and I want to go mobile.

Gary k7mhz

Source record: 93790

Just set up my newly received Pegasus today. I had tried two Kachina Radios, an early one and a later one, both were returned. Operating on phone both would kick the protect circuit on my Alpha 87A quite frequently due to what appeared to be ALC overshoot.Just set up the Pegasus today and the first thing I noticed, no alc overshoot or keying spike. It works beautiful with the Alpha and the noise reduction appears to me to quiet the background noise without the, " In the barrell effect" I had noticed on the Kachina radios. Received great audio reports and the receiver audio sounds very nice. For $895, it's a winner.

: all of the tools that this person takes with them must be carefully
thought out
: to provide the maximum advantage in the smallest package.
:
: The Yaesu can accept NiCad AA batteries which are recharged through an
: inexpensive ($20) solar recharger.
:
: Even Better, I can take almost any battery (AA, B, C, D, 9-volt,
prismatic,
: etc.), spend less than 5 minutes and have it working through the external
DC
: port. Oh, I can also run the radio off any automobile cigarette lighter.
. .how
: exactly do you do this with a PRC127? What's the NSN for the cigarette
light
: adapter or the AC adapter?
:
: Also, the Yaesu VX5 is not limited to a very small Tx/Rx range (The PRC127
is
: limited to the 136 - 160 MHz). The VX5's Rx Range is :0.5-15.995 MHz,
: 48-728.990 MHz, and 800-998.990 MHz. The VX5's Tx Range is 50-54 MHz,
144-148
: MHz, 430-450 MHz. All of these are before any modifications are done to
the
: radio. That sound a lot wider than the PRC127, now doesn't it?
:
: Oh, can the PRC 127 receive any of the following :
:
: NOAA Weather Reporting Stations?
: AM and FM radio Stations?

: Police Bands?
: Business Bands?
: TV Sound?
: Commercial Shortwave Broadcasts?
:
: Can the PRC127 do a VFO or Memory Scan?
: Can the PRC127 give you a temperature reading?
: Can the PRC127 give you a barometric pressure reading not only for the
time you
: need it, but also keep track of the last several readings to tell you if
the
: pressure is rising or dropping (something a "survivalist" may want to know
as it
: can indicate oncoming weather fronts)?.
:
: The VX5 can. And do it for around $400. What's the PRC127 running for
right
: now? (I truly don't know).
:
: Why would a "survivalist" need all these things? Simply because they may
be
: interested in receiving as much information as possible without lugging
around 2
: or 3 different radios. If the power goes out in your neighborhood and the
TV
: doesn't work. . .you can turn on your VX5 to the TV sound freqs and hear
: updates. . .or go to the local AM news station for the same (AM stations
can
: still transmit from the most basic of remotes. . including a gas-powered
: generator). . .is this a capability shared by the PRC127? No.
:
: If the power is out to the radio and TV stations, can the PRC127 scan
police and
: fire freqs (most police departments have a generator backup for their base
: stations and vehicles have a built-in recharger for handheld police
radios, so
: power is seldom a problem for them) for updates on any situations which
may
: endanger the "survivalist's" life? No.
:
: But the VX5 can.
:
: Better yet, can the PRC127 get onto the local HAM radio net to listen for
: arising problems? Probably not, but this depends upon the freq of the
local
: net, now doesn't it? The VX5 will have no problems, though.
:
: Can the PRC127 do packet radio? I hesitate to answer "no" immediately to
this
: as there is probably a way to do so. I do think that you can encrypt the

127's
: transmission with a KY set, but am not sure about packet radio.
:
: BTW, I do know that you can encrypt the VX5 (*Please note : this is an
illegal
: modification to the radio) using one of Transcrypt's DES boards AND can do
: packet radio quite easily with or without the (illegal) encryption mod.
:
: Now, there _are_ downsides to the VX5 as a tactical radio. First off,
you'd
: better make sure you lock the keypad out before moving around with it.
Even the
: tiniest bump may change your settings. Also, fully waterproof tactical
headsets
: can be expensive (I have a set of Eagle conduction headsets that cost me
over
: $350 apiece. . .but I've been using a cheap set-up (earplug and handmike
in a
: waterproof pouch) for a while now and it seems to work rather well. . for
a lot
: less than $350 (total cost was about $30).
:
: Also, the backlit display may light up (if you haven't programmed the
settings
: to do otherwise) during either Tx or Rx. . .possibly a danger at night.
At
: least the backlight is a muted red instead of a white, yellow or green.
:
: The VX5 is very rugged, but I would doubt that it is as rugged as the
PRC127. I
: would have no compunctions about swimming with a 127, but I'd want to put
my
: Yaesu in a waterproof baggie if at all possible before I swam with it for
any
: length of time.
:

VX5 has all the features you mention. However it is rather
breakable over what we use in the military. It would only
good for short term emergencies. Not not for the "end of
the world" situation that you suggest.

: > For long range communication, the SGC-2000 is a commerical
: > radio used by boaters, the military and others for HF commo. It
: > covers 1.8 to 30 Mhz. With the little work it will HF data as well.
:
: Well, I'm unfamiliar with the SGC-2000 unless you made a typo and mean the
: SCG-2000. But the SCG-2000 is a good radio, too. A bit large and
expensive for
: the purpose.
:

It is a good rugged radio. If the world ends, like you are preparing
for, then you are going to need high power, long distance communication.
Not just something for local squad level communication.

: > If you would become a Ham, you might have learned this
: > already. That is why I cross posted it to Rec.Amateur.Equipment.
:
: Who says that I am not a HAM? Do not assume that I am not. Besides, why
would
: I want to post my real name so that I can be tracked back down to my
address,
: etc?
:
: Do you live in West Lafayette, Norwich or Sebago Lake? Which is your
middle
: initial : A., L. or T.?
:

You are a little too paranoid. Hell, I work for the government.
And do things for the military that would make you very nerous.
Hell, I made some of the guys nervous in the unit when I showed
them how to make my ICOM W2A scan Cellular frequencies.
Anyone with SigInt background gets nervous thinking about
civilians with the ability to do surveillance.

: So you see, Greg (if that is your _real_ name), these reasons are probably
why
: the original poster didn't want to ask a HAM group. HAM groups, just like
most
: other narrow-topic groups, tend to have a rather myopic point of view when
it
: comes to recommendations for a specific item's appropriateness for a
: preparedness scenario.
:
: You would have this person spend money and potentially risk their life on
a
: piece of military equipment that is extremely limited in it's abilities.
Yes,
: the PRC127 is a good radio, but it is not necessarily an appropriate radio
for a
: "survivalist" to use at the exclusion of another. "Survivalism" is not
about
: running around in cammies, toting assault rifles and conducting a
: movement-to-contact with spikey-haired mutants (or Federals), despite what
the
: media would have you believe.
:
: And while you will probably take an offense at many of my statements, I
ask you
: to honestly look at the arguments I've posted. If you can find fault with
them,
: then please do so.

:

I find offense that you are that paranoid. Or that you would
think the world is coming to end. I prepare for disasters but
I am not expecting life as we know it to end. It has taken us
too long to get here. And I will fight you or anyone else who
is willing to destroy our nation, our constitution or our freedoms.

Your fear is more dangerous than what you fear. I just would
not go to the extremes that you have. However, within that
context, you are well prepared.

I have too many within the military that are just as scared as
you. My answer is that it seems that you do not trust God to
save us or you think that God will turn his back on us (Rom.
8 would suggest otherwise).

Hello,

I have an ICOM 02at package for sale.

1 - Icom 02AT in Very good condition (a couple of scratches)
1 - BP-4 (Looks brand new)
1 - DC-1 (Looks a little old)
1 - HM-?? (It's in real good condition, but doesn't have a number; It an Icom)
1 - HS-10SB Headset switch
1 - HS-10 Headset (needs a new ear pad)
1 - BC-25u AC power supply

This is sold as a package only.....
You ship from 93003

Asking $125

$140
>& UP!! For that price I'll get a brand new MFGR warrantied unit!!

Ur, there's a concept called CAPITALISM that's been around a few hundred years. You might want to check up on it cuz it seems to be more than a passing fad. Price is dictated by the market. If those 2m mobiles were priced too high, then they got carried home. The sellers hopefully learned a lesson, and aimed lower at the next show. On the other hand, if they sold, then the price was correct - value is derived ONLY by what the general market perceives as proper, and therefore pays - look at the "value" of Pokemon for crying out loud! Since all 3 items were similarly priced you may need to go back and do some research to see if your expectations were reasonable. "Getting a deal" equates to paying less than the perceived value - and items priced that way sell very quickly. Maybe all the $50 pristine radios were sold before you got there?

BTW: Radio gear holds it's "value" far better than computer equipment...or Pokemon!

Hi,
Looking for a Direct TV DSS satellite dish setup. Have
ham gear to trade or cash. Used Ok. Must work.
Replacing one damaged by near strike and homeowners wont pay so looking
for something used. Most places out here want you to
subscribe for a year of service minimum, but I already subscribe.

Looking primarily for secondary receiver + card, but will consider
buying
entire setup including dish if UPS shipping is reasonable. I already
have the original dish which seems to work fine, so, just receiver +
card
is OK. Must be DIRECT TV since that is what I subscribe to now.

Please state what you have (model, etc), condition, and price.

I have ham gear for trade including HF, VHF, and UHF gear if you
prefer to trade instead of cash.

thanks,
Joe K7JOE

I would treat the oil as if it had pcb, and dispose of it at the hazardous
waste, I would replace the current oil with a refrigeration oil type 3GS
which is a highly refined mineral oil, which I have been using for the last
15 years. They also have a locking plastic ring for top of 1 gallon paint
cans snap one of these on and the only spills will be from the vent.

3659. Problem with Icom 706MKIIG

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-23 00:00:00 UTC
From: Pacific Crest Community School <pcrest@teleport.com>
Message-ID: <383A9B19.F58E625B@teleport.com>
Source record: 93608

I have a problem with my brand new 706MKIIG. When I key the mic and as soon as I start to talk, there is a strange buzzing noise and the ALC becomes pegged. The ALC remains pegged and does not move until I unkey the mic. I have not changed the factory settings and ALC is set just how it was when I received the radio (five days ago). I am using a SM-8 mic (about 5 years old -- I used this mic with my original 706 and in worked fine).

Any suggestions?

Thanks,

Dan NX9C

Andy,

The left-hand heatsink is a built in option on all of these new, small, teeny-weeny, micro machines we call radios. When the radio gets too hot to hold in the right hand, switch to the left and voila! Good for another few mintues.

Sorry, I couldn't resist.

73 Dan / N7WPD

Source record: 93610

I have a problem with my brand new 706MKIIG. When I key the mic and as soon as I start to talk, there is a strange buzzing noise and the ALC becomes pegged. The ALC remains pegged and does not move until I unkey the mic. I have not changed the factory settings and ALC is set just how it was when I received the radio (five days ago). I am using a SM-8 mic (about 5 years old -- I used this mic with my original 706 and in worked fine). The odd thing is that this only happens when I have the 13 pin acc plug plugged into the back of the radio (this goes to my Kam+). This cable is the one I used with the original 706. Have the pin outputs changed between the 706 and the 706MKIIG? Do I need to purchase a different cable for the TNC?

Any suggestions?

Thanks,

Dan NX9C

Its not a power amp. It is a power supply and the receiver is kinda usless without it.

Source record: 93706

I have three (3) model BAH100 mobile amplifiers made by Regency.
Drives with about 15-25 watts for 75-100 watts output. Powered by
13.8 DC.

150-174 MHz but they do work OK down to 145 MHz by retuning the
variable capacitors.

Removed from service in working order.

Copies of service manual available with purchase.

$ 100.00 for all 3 plus $ 20.00 for shipping (the heatsinks are
heavy!)

Please reply via e-mail

: >VX5 has all the features you mention. However it is rather breakable
over what
: >we use in the military.
:
: Okay. That's strange. I've broken more PRC77's and 68's than you can
shake a
: stick at. I even broke some of the Sabre's and Satcoms (though the
earlier
: models of the latter were rather delicate).

Actually we are using radios that are more like the new IC-706
or FT-100. Light weight HF radios are making a come back.
SINCGARS has replaced the PRC-77 but still is nothing but
a big 5W radio (25W in mobile mode). Even the PRC-126
(5W handheld, 30 to 88 Mhz) is big. Range is lacking thus we
are looking at radio that will give us more coverage without using
repeaters like MSE does.

: > It would only good for short term emergencies. Not not for the "end of
the
: >world" situation that you suggest.
:
: Who said anything about TEOTWAWKI? The original poster mentioned a radio
for a
: Y2K scenario. In my personal opinion, Y2K will not be a TEOTWAWKI
scenario. It
: may end up being something where a person needs to receive as much
information
: as possible to keep abreast of the situation.

It is the sub message to Y2K that it is all going to be over,
that we are returning to a simpler age.

: >
: > : > For long range communication, the SGC-2000 is a commerical
: > : > radio used by boaters, the military and others for HF commo. It
: > : > covers 1.8 to 30 Mhz. With the little work it will HF data as well.
: > :
: > : Well, I'm unfamiliar with the SGC-2000 unless you made a typo and mean
the
: > : SCG-2000. But the SCG-2000 is a good radio, too. A bit large and
: > expensive for the purpose.
: > :
: >

: > It is a good rugged radio. If the world ends, like you are preparing
: > for, then you are going to need high power, long distance communication.
: > Not just something for local squad level communication.
:
: Look, bud, I don't know where you get this idea that all survivalists are
: preparing for the end of the world, but we're not. Many of us are
preparing for
: life's little bumps.
:
: And exactly why will I need high-power, long-distance communication? To
whom,
: exactly, am I going to speak? Transmitting my location in a TEOTWAWKI
situation
: would probably be counter-productive (yes, I'm fully aware that a receiver
can
: be found even when in Rx mode).
:

Given the end of the world type scenarios we are being given,
I doubt that their would be anyone looking. Long distance commo
would be very valuable, after a period of time. People would
have to trade and that means commo.

: > : Do you live in West Lafayette, Norwich or Sebago Lake? Which is your
middle
: >
: > : initial : A., L. or T.?
: > :
: >
: > You are a little too paranoid. Hell, I work for the government.
: > And do things for the military that would make you very nerous.
: > Hell, I made some of the guys nervous in the unit when I showed
: > them how to make my ICOM W2A scan Cellular frequencies.
: > Anyone with SigInt background gets nervous thinking about
: > civilians with the ability to do surveillance.
:
: Oh please. Sir, if you hold more heat than the three blankets I wore
(last one
: being the nifty little green color that you get when you complete JFK-SWC
and
: earn the 18Bravo designation (with both the W8 -and- W9), then lay your
: credentials on the table. I'd be willing to swap my DD214 with your 201
file
: anyday of the week. Just tell me who and where your CO is and I'll have
my VFW
: commander drop him a line to prove I am what I say.
:

Who gives a shit. My colonel would not care. Hell, a third of the unit
are Vietnam Vets. So what does it matter what you did 30 years ago.
That isn't today. Now you are an old man, with stories to tell your

grand kids. Your time has pasted.

: And modifying a radio to receive cell freqs is one of the most basic mods
: around. Both my Yaesu FT50 and VX5 do it all day long. Anyone with half
a
: brain and a soldering iron can do it with instructions found right here on
the
: net.

From what I am seeing there are no mods for the VX5 to allow
the receiving Cell Freqs. That is unless you have one shipped
in from Europe.

: I'd bet you're probably one of the 98-series guys, aren't you? I had a
: ditty-bopper that was originally a Level 2 98Charlie. He was one of the
: flakiest guys I've ever known. Dude could do some serious shi* when it
came to
: commo, though. He, too, had a high opinion of himself. But you don't
sound as
: if you've been through DLI, so let me guess. . .you're with the NRO and
are
: attached to a military unit. . right? Please.
:

The gunts do their thing, the rest of us do ours....

: . . .snip. . .
:
:
: >
: > I find offense that you are that paranoid. Or that you would
: > think the world is coming to end. I prepare for disasters but
: > I am not expecting life as we know it to end. It has taken us
: > too long to get here. And I will fight you or anyone else who
: > is willing to destroy our nation, our constitution or our freedoms.
:
: What in the hell are you talking about?
:
: You are offended because you think that I feel the world is coming to an
end?
:
: To begin with, I never said anything about the End of the world as we know
it.
: YOU did.
:

It is your general tone. You are outside the system.
You seem to have forgotten what our oath stands
for.

: And then you go on to say that you will fight me because I am willing to
". .

: .destroy our nation. . ."
:
: NOW who's being paranoid?
:
: I defy you to find one statement where I even mentioned a desire to
overthrow,
: assault or otherwise topple the federal government (I did make a comment
about
: overthrowing Illinois. . .but I consider that to be a third-world country.
.
: .Chicago most especially. . but then you are somewhat familiar with
Illinois
: being from a place not too far from the border, aren't you?).
:

I will agree that Ilinois is a real shit hole. Most conservatives
in that state agree as well. BTW, if you would check out my
callsign, you would have my address. I do not hide.

: > Your fear is more dangerous than what you fear. I just would
: > not go to the extremes that you have. However, within that
: > context, you are well prepared.
:
: What extremes? A guy asks a question about a radio and now I'm an
extremist
: because I recommended he get a HAM radio? Dude, you've been playing
around
:the electricity too much.

The general tone of the question in the first place. The survival
thought process, thinking of oneself not of helping others.

: If you think putting away some food, water and other supplies is extreme,
then
: perhaps you should stick to decaffeinated and stay away from newsgroups
such as
: misc.survivalism from whence this thread originated.
:

Perhaps survivalism should think more about emergency
preparedness rather just themselves surviving. If shit happens,
we are going to need trained and disciplined workers to
straighten out the mess. Not paranoia. That includes even
the average tornado.

: > I have too many within the military that are just as scared as you. My
answer
: > is that it seems that you do not trust God to save us or you think that
God
: > will turn his back on us (Rom. 8 would suggest otherwise).
:
: No, I don't EXPECT God to save us/me. I think God expects me to do as

much as
: I can to save myself. If I am willing of spirit and body, then He will
assist
: me. I'm not a Lazy Christian who believes that just because I go to
church on
: Sunday I'll be admitted to the Pearly Gates.

I see the paranoid right as not trusting God. In fact they expect
God to punish us all. They are looking for a hell on earth to justify
their self rightousness.

: Look dude, I don't know what stuck in your craw, but the fact is that
we're
: going to just have to agree to disagree. This is turning into little more
than
: TROLLING bait with your rhetoric. If you want to discuss the pro's and
con's of
: one system over another, then fine, let's go. Otherwise, as far as I'm
: concerned, you can have the last word. Feel free to tell the world about
what a
: paranoid, delusional and clueless heathen I am.
:
: Too bad, too. I would have loved to discuss some of the current trends in
: military communication, seeing as West Lafayette is only about an hour and
a
: half away from my home.

Most of the current info is on the Army's web page (http://www.army.mil)
Or go to the Army's Signal branch and get the Signal mag sent to you.
It is at the local university's ROTC library as well.

3673. Re: Product Review: Radio Shack HTX-10 10M allmode rig

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-23 00:00:00 UTC

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

a few points...

-- Quality: yep, that little lightweight mic feels *LAME*.
It may be fine electrically but, Ugh! One way is to remove
the innards and put 'em in a real mic shell. (I really don't
care about Up/Down on the mic myself.)

As far as rig innards: great PCB quality, etc. Lots of
surface mount parts. Nice heatsink for finals & AM
modulator. Switches/controls feel OK.

-- Yes, lack of CTCSS is a flaw. If they put rptr offsets
on it, they shoulda put PL on it! Esp. on 10 meters
where it'd be easy to key up multiple repeaters under
the right conditions...

Even if you build a little PL widget there's no way to
assign PL tones to stored channels.

-- CW hack: this'd involve keeping the receiver on USB/LSB -
w/possibly a narrow IF filter switched in. On transmit,
the rig would be switched into FM mode (continuous carrier)
but audio modulation source would be disconnected from VCO.

This'd take a bit of work w/mode switching wiring but
shouldn't be too hard. Unfortunately this little radio
essentially is single conversion on sideband - from the
looks of the block diagram, AM/FM is double conversion
(10.695MHz 1st IF, 455kHz 2nd IF) but SSB is 10.695MHz
1st IF, then product detection.

Plan B for CW receive would be to run receive in AM
and inject a bit of a 455kHz BFO into the AM detector.
Might work OK, and perhaps narrower 10.695mHz xtal and
455kHZ ceramic filters could be obtained and switched
in.

3682. When Offering a Trade-

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-23 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <383A9E2A.36A7C7EE@ix.netcom.com>
Source record: 93718
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I have a humbly-offered suggestion.

When asking about or offering a trade, please tell
the other party which areas and types of equipment
interest you. It is very frustrating to have someone
say: "I might trade. What have you got?"
To which I have to reply: "Lots of stuff- what do you want?"
It wastes time and effort to offer a list of Drake equipment
when the person is interested in Hallicrafters.
Trying to maintain a large trade list- of which 90%
would not be of interest to a given individual-
is also inefficient.

With Thanks,
Dave S.

For Sale:

TenTec 560 Corsair transceiver. 160 through 10 m
including WARC bands. SSB or CW, with 100 Watts
output, digital readout, great QSK. With manual
for $550

TenTec 260 Power Supply. Matches Corsair.
13 V DC at 20 amps, with speaker. Manual
included for $170

TenTec 285 CW filter, 500 Hz. For Corsair,
Paragon, Omni V and VI. Still in the box. $ 70

TenTec hand microphone with 4 pin plug.
Matches most any of the modern TenTec
rigs that take the 4 pin plug. $ 35

TenTec 229 A antenna tuner. This is the full 1500 Watt
version with the roller inductor. It also has a wattmeter /
SWR bridge built in, and a back lit dial. An antenna switch
is also part of the unit. The optional balun is included in
this one. It is in good shape both electrically and
cosmetically. Manual included for $225.

TenTec 252 power supply, 20 amp, 13 V DC supply.
Ammeter. Speaker added. Matches the Triton series
(Silverish gray color). $ 100

TenTec 255 heavy duty deluxe 20 amp, 13 V DC supply.
Speaker and ammeter included. Matches the Omni
Series A, B, and C. (Chocolate brown color)
With manual for $ 150.

Prices do not include shipping from Florida.

Thanks.

Another humbly-offered suggestion:

A simple sale of what you have and subsequent purchase of what you
want will open up the markets considerably for you.

I just installed an antenna on the trunk lip about 8 inches behind the rear window (driver's side). Before that I just used magmount on the roof.

Whenever I transmit on high power (about 45 watts), my brakelight warning light on the dash comes on and usually stays on. The brakelights still work correctly and when I restart the car, the light goes off (until I transmit again.)

Any help would be welcome. Including help on just possibilities or how to locate the problem. I am at a loss right now. --Thank You

Also, when making a listing, use the term"FS/trade:" in the subject box
if you want results.
When a seller says he will trade for something, don't ask what he wants;
just tell him what you have. Whenever someone asks me what I want, I
tell them I would like a new Corvette. If they don't have one then the
obvious thing will have to be for them to tell me what they are looking
to get rid of.
Most guys who just say they want to "trade for something" which means
they are just looking to clean out the shack and aren't picky about what
they want for it. You can usually get a good deal with those
guys(including myself) so don't try to pin down the seller. Just send
him the list of junk you want to unload and see if you get lucky!

scramac@attglobal.net wrote:

> Any opinions will be greatly appreciated.

NO one here can give you ANY intelligent opinions, Samuel, until you do a little homework on your end! You need to know what is happening in your region on the amateur bands!

Join your local amateur radio club(s). See what's available in your area as far as repeaters go. Discover just what you need from amateur radio - and by participating in your club's activities, what you can do FOR this wonderful hobby!

For example, I joined clubs and found out what -I- needed as MY first HT ... but I would never recommend that particular HT to anyone blindly. It was a pair of Standard C288a 220mHz HTs. Which I still use to this day. But back then, I needed 220 as *my* first HT.

So...please contact the ARRL or your local Ham shop. See what's happening in your locale. There you will find others who are daily doing exactly what you want to do as far as communications are concerned. You'll also get great equipment recommendations from neighbors, too!

Best of luck. This is a great hobby - WELCOME BACK!

I've reviewed previous postings about this amplifier.

What I'd like to know from current or previous owners
is how well it works (or worked) for you.

Is Ameritron being straight about this amplifier's
capabilities in their advertisements?

Does the "instantaneous bias" arrangement work as
advertised? Did you get splatter complaints or any
similar problems?

Is it easy and stable to tune?

Can it practically be run on 110-120 volts or is 220-240
recommended?

Thanks

Source record: 93731

Heres another "humbly offered suggestion" to those looking to sell trade
their used gear:
Please find out what a same/or similar radio currently sells for BEFORE you
try to sell/trade. Don't go by what you paid for it. Just because your old
'386 computer originally cost you $1600, no one is "getting a deal" because
you are letting it go for $900. The same with ham gear. Brand new dual band
HT's are now selling for what a 2 meter ht sold for only 2 years ago. I hate
when someone at a hamfest is asking $15 bucks less than a brand new unit for
his old used one. (it doeen't matter if he's "throwing in a used speakermike or
xtra battery or whatever!) I'm sure the gentleman originally paid 80 or 100
bucks over what he's asking, but he should have done his homework. Recently I
went to a fest looking for a 50W 2M mobile used. I figured since virtually
every brand new model currently sells for between $139-189, I should be able
to find one for between $60-99 bucks. The three I found were all asking $140
& UP!! For that price I'll get a brand new MFGR warrantied unit!!

3696. Wanted HF HTs

The price must go much lower before I buy a FT-100. I was first to purchase a VX-1R and then a FT-920 at high prices. Then the prices dropped. I will now wait until the cost of a FT-100 goes below $1,000.00 before I again spend big bucks for something new.

One more item of interest: The first 7 of the 14 FRS channels are the same
frequency as 7 of the 23 GMRS channels. That is why both ADI and Kenwood
are introducing dual use GMRS/FRS radios for about $200. GMRS is licensed
to an individual, intended for family use - all members of a family are
covered by the single GMRS license - appllication fee is $80.
GMRS radios can have more power (5 watts) than FRS (500 mw) and can have
larger antennae.
The cross-over between FRS and GMRS is interesting because of the
slightly different stated purposes. FRS is for recreation use only, with
no business allowed. GMRS is for family use only (only individuals can
hold licenses - no "entity" licenses) but can be used for business as well
as recreation. I gather that GMRS is really intended for farming families.
A GMRS licensee is supposed ot set upa single net of family members, with
base and repeater stations if desired, and a selected primary channel. But
GMRS users on separate licenses (nets) can talk to each other.

>is something to worry about.

Any of these radios is about 50% efficient during transmit. So if you're
transmitting at 5 W, you're actually drawing 10 W from the battery, and
dissipating 5 W of heat. If you talk for a while, the radio is going
to get hot.

One easy solution is to reduce power. The difference in range between
1 W and 5 W is rather small, so it's seldom that 5 W will get through
but 1 W will not. At 1 W, there's only 1/5 the heat dissipated and
the battery will last more than 5 times as long.

Dave

Hi Ken,
Stock FT-990/AT DC w/wideSSB filter and tuner, mint condition $1000.00
Stock FT-900/AT AC/DC w/wide SSB&CW filters, mint condition $1200.00

Narrow filters, TCXO, and SP-6 generally will not effect price unless purchased separate. I've seen the DC model as low as $800 and the AC model, loaded with filters, TCXO, and SP-6 w/59Y sell for $1400.

I sold my 990 when I first learned of the 920, it was a mistake. If I had waited for the 920 to hit the stores, I'd still have the 990.

Fairly normal for those. I have a ft-470 that is much the same as far as heat. I picked up a ft-2500m last week. I was running it with med and high power , and noticed the same. The dang radio was cooking hot. This may be acceptable to the design of the radio, but I still don't like it. I dug out a old fan from a puter P/S, and mounted on top of the heat sink. Helped big time. Now the radio just gets warm instead of near egg cooking temp. Yeasu made the sink so that two fans of the type I have will fit perfectly side by side on the heat sink.I'm gonna add a second one later on. Should run cool at 50w after that. The heat may be acceptable on those designs, but it still doesn't do the radios any good. Of course, kinda hard to plant a fan on an HT..:< MK

3720. ADI AR-247 30 Watt 220mhz mobile...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-24 00:00:00 UTC
From: SBconnelly@ix.netcom.com
Message-ID: <383c64d2.929632@nntp.ix.netcom.com>
Source record: 93556

Hi,

I just got one of these yesterday and really like it. (First new radio I've ever bought!) It is modeled after the AR-147 and AR-447 units. Seems to be a clone of a very similar Kenwood 2m mobile (model 261) but is set up for 220mhz. Anyway, the transmit audio is very much over driven and no adjustment is apparent in the mic or on the main circuit board. Temporarily, I ended up stuffing an electrolytic 10uf cap and 5k series pot to ground in the mic case to adjust the output of the condenser element, but I'd love to know if anyone has figured out a better way. Also, the digital S-meter is way too generous, anyone adjusted one of these (or the 2 meter or 440mhz versions)?

There are 4 potentiometers on the main board, VR-1, VR-2, VR-3, and VR-4. The only one I have been able to identify is VR-4, which sets the deviation. Anyone know the function of the other 3 pots? Is there a service manual available for this rig?

Thanks,

Rob C.

Since it is new and under warranty, why not exercise the warranty instead
of taking a chance on voiding it by trying to fix it yourself?

Alinco DJ-V5th.....all I need to say!

Now that your curious, let me tell you this. I have had mine for a couple of months and it is the most fantastic little handful I have ever owned. I bought it on the net from Ham Radio Outlet for 239.95, total! Free shipping over a hundred bucks. It is a dual band, with a receiver expandable from 76 - 999mhz, including wide band fm reception for the fm broadcast and tv bands...It has 200 channel scannable memory with alphanumeric tags so it can be used as an fm radio, a 2 meter handheld with 5 watts, a 70cm handheld with 5 watts, a vhf/uhf scanner, a weather radio, a tv receiver and in my case, a handi talkie on 455.050 on my companies repeater frequency. It is 5 watts out of the box and 6 with external 12 volt power in your car. How do you beat it for 240 bucks????

Hi Ken;

The FT-990 is the ONLY radio that has hit the market in the past
decade that didn't need any "mods" to correct any mfgr's problems. I owned
a TS-940SAT that I just got back from the Original owners of International
Radio & Computers, the originators of the aftermarket filters that made
Kenwoods close to a Yaesu. And I put it on the counter next to a new 990,
switching back & forth radio to radio talking to friends in Australia
getting reports of signal strength, audio quality, etc. The 990 out did
the 940 all the way around.
Another little known fact is the 990 allows you to adjust the
audio so those you know and talk to will know it is you, and they don't
have to get used to your "new" audio!!.
If you can find a SP-6 or SP-5 with the real Timewave DSP59-Y installed
you will have a real butt kicking station that you will be proud to say
you own!! I have that very set-up, and I've had some big guns offer me
well over $1600.00 for my 990, and SP-5 with DSP59-Y.
I've compared it to a 920, and there is no comparison...take the 990!!

That's the first 38 I've heard of *without* a serial port! I had one
for a while, and uploaded and downloaded waypoints from it. And it
does output NMEA position data, which is what APRS probably uses.

You may be confusing the GPS 38 (Garmin's low-end receiver at one time)
with the Magellan 2000 (their low-end receiver, which did indeed lack a
serial port).

The first thing you've got to do is set your computer clock back to the right time when you post so that you don't keep your post on top. Wouldn't it be great if everyone did what you are doing??? This news group doesn't need idiots like you.

A SAFER WAY TO QUICK CHANGE YOUR H.T.ANTENNA

Prevents damage to your radio's SMA antenna connection due to always having to change antennas to suit your needs. Adapter will take all the wear and tear,Instead of the chassis connector. Factory repairs are expensive! Use of my adapter allows you to safely and quickly change your BNC antennas or connectors at a low cost.

Adapter has gold contacts with a black neoprene rubber covering. Will fit all BNC connectors. Low profile(adds only 1/2"-to-5/8")(depending on radio model)to overall antenna length. Rubber base seals against moisture and dirt,plus provides a firm support for all your antenna applications. No need to remove once Installed to quick change antennas.

To view a photo of adapter(Installed on my VX-5)please go to:

>a lesson, and aimed lower at the next show. On the other hand, if they
>sold, then the price was correct - value is derived ONLY by what the general
>market perceives as proper, and therefore pays - look at the "value" of
>Pokemon for crying out loud! Since all 3 items were similarly priced you
>may need to go back and do some research to see if your expectations were
>reasonable. "Getting a deal" equates to paying less than the perceived
>value - and items priced that way sell very quickly. ...."
Those mobiles I'm sure were priced too high & carried home as you say.
The Price in all cases was based on "Well I paid $275 for it when I bought it
", not based on the fact that those exact models now sell for less than $180
Brand new. They were unaware of the current price of the item now. I suggest
people do their homework in the spirit of finding the correct price at which it

will most likley sell (Capitalisim), not by using the concept of "I may find one mis-informed moron to rip-off before I fold up this table & he'll never find me again". I've also met people that were VERy dis-appointed after learning that the used radio they got a "deal on" at the hamfest is one that they could have gotten factory sealed & new for around the same price, they also should have done their homework, but should not have never the less been taken advantage of by a fellow Amateur.

3744. Found FT-301D Read-out chips

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-24 00:00:00 UTC
From: Ron N6AHA <ronc@sonic.net>
Message-ID: <KLI_3.18$yd.386@typhoon.sonic.net>
Source record: 93620

Although Yaesu has not yet returned my e-mail, I have located a source of TIL306 chips, which are the combined LED/BCD driver readouts used in the right four digits of the frequency display of the FT-301D transceiver. They, and the TIL308's (used in the two left digits) had a bad habit of losing segments over time. Texas Instrument manufactured and they still have all the specs on their web page (www.ti.com. Search for "TIL306"), but no longer make or stock them.

The good news is that Rochester Electronics, Inc. (www.rocelec.com) does have a few remaining 306's (no 308's, unfortunately), and they're only $19.93 each. That's about what I was expecting. The bad news, is that Rochester has a $50.00 minimum order!

If anyone is interested in splitting an order for three or more of them with me, please let me know, and I'll order them up right away.

I recently purchased a Icom W32A as a first radio, and have some concerns about the unit heating up during transmissions. I know that there will be some warming, but it gets so hot that it is sometimes hard to hold. I was wondering if this is generally standard and if it is something to worry about.

Thanks for the help!

Belay that maties! Minutes after I posted below, Yaesu got back to me and let me know the 306's are available through Newark Electronics. I check their www site (www.newark.com) and found they had 7 in stock for $12.71 each! No minimum order, but $5 charge for orders less than $25. So I ordered one. Although they listed the 308's in the on-line catalogue, they showed none in stock. I'll settle for half a loaf!

Hello All,

I am looking to purchase a Motorola Microphone that would fit the Motorola Micor type radios. This most be in perfect working condition and good to great physical condition.

I am also looking for those nice Motorola speakers. I am thinking of the ones that were meant for mobiles use, black color and I believe that there were blue letters on it.

We need this for our repeater project.

If you have either of these to get rid of, please E-mail me or call me.

E-mail: radiotek@pacbell.net

Try getting to know your local radio communications shop. You know that type of shop that supplies all the comms for commercial use radios, like trucking companies.
I have a couple of Maxon sm4450se models and i borrow a programmer burner from a local comms shop.

So far, I've received a couple nice (and positive)
replies to my request via e-mail. I'd like more
than two responses, and would love to hear of any
thing users might dislike about this amplifier
which seems to have a good reputation. I've not
seen ANY negative comments (other than the fact
that it has a little less output than a more
powerful amplifier (about 3 dB, it seems).

For Sale:

Autek QF-1 A, Audio filter. This is the newer filter --
the "A" model. It is powered from 110 V AC, and
features peaking, notch, low pass, and high pass
functions, along with an auxiliary notch, in addition
to the other functions. Of course the frequency,
width, etc. are all adjustable.

This particular unit is in great shape. I found one very
small scratch on it, in the back.

Manual is included for $50, plus shipping from Florida.

Thanks.

73,

Ken, W8EK

You have RF getting into the MOD line of the radio through the 13 pin
connector. Why not try using FSK keying and disconnecting the MOD
line I'll bet it will clear up. The MOD line has a 10,000 OHM input
impedance so ANY noise will get right into the mic audio causing
teansmit audio distortion. RF can also cause other things to happen
in today's digital controlled transceivers.

Sounds like you have a abundance of RF floating about. Does this
situation also clear itself if you utilize a dummy load and leave the
Kam+ connected ? Where is your antenna mounted in relation to the
radio ? There are some differences between the original 7067 and 706
MKII G, one is the addition of a Vsend line for VHF TX control the
original 706 did not have this line.

I have seen three differnent brand names on the Radio Shack 10 MTR radio. They can seen as either 10 mtr Export models on CB sites or even a 11 mtr export. I remeber one model "blackhawk" looks exactly the same as Radio shack will transmit from 24 to 29.999 MHZ. I was considering this as it would cover 12,11,10 mtrs for $139. Not bad.

Boy are you going to be sorely disappointed in life.

Seriously, caveat emptor. It's the BUYERS responsibilty to check
out what is being bought. The SELLERS responsibility is to
honestly represent the product.

Beyond that, the seller can ask anything he/she wants for something,
and the the buyer can offer anything he/she feels reasonable.

I used to own a Yaesu FT-530 and I loved it, but I gave up the hobby in 1995 and sold it. Now I'm looking at getting back into the hobby, but I have no idea what HH to get. I'm looking at getting something in the price range of $250 US.

Dual band
Small size
Ease of operation
DTMF keypad is appreciated, but not essential
Long lasting battery life

Any ideas?

Sylvain (Formerly VE2CSB, but now waiting for new callsign...)

Steve,

I know nothing about you but can conclude from using your callsign and the QRZ database you are an Extra class amateur.

1. You, as an Extra Class Amateur Radio License holder, I expect to be knowledgeable about radio theory and electrical practices. I do point out we all learned about radio theory, proper RF and electrical handling during our studies for our respective license. An amateur radio license of any class does not make us RF engineers, though I would expect we as amateur radio operators not to be oblivious to proper RF handling and electrical requirements.

Not trying to be arrogant, condescending or disrespectful with my comments here.

>If the 706 "is" a Mobile rig then it is the RESPONCABILITY of the
>DESIGN ENGINEERS and NOT THE Paying "USERS" to provide the DESIGN that
>will SAFELY AND RELAIABLY work in the STATED OPERATIONAL ENVIROMENT.

From your post, looks to me you would have manufactures protect you from any possible action you could take with your radio. By publishing warnings and installing protection circuits. This way nothing you could do to or with your radio would be your responsibility. I would have you reread statement 1. above again. At some point the radio amateur has to apply his knowledge about proper handling of RF and electricity that he learned during his license studies and take some responsibility for his own actions. People today seem want to leave it to manufacturers to protect them from themselves and any responsibility.

Today's radios do operate SAFELY and RELIABLY in the stated operational environment.

The manufactures could publish 600 pages of warnings designed to protect you. ie:

Do not plug a 12 volt radio into the wall outlet or severe damage to product will result.

Pouring Coca cola into your radio is not recommended by manufacturer and will likely cause major internal damage to the product..

Do not drive your vehicle upon your radio as it will not support the vehicle weight.

Radio not recommended to be placed into operating 500 degree pizza oven as it will be damaged.

Do not place your tongue onto antenna while transmitting at any power level or severe RF burns could result.

Placing radio into microwave oven and operating the oven could cause damage to product. (Have actually seen one attempt to dry a wet radio this way, the microwave melted most all internal cabling and rendered the radio non repairable)

This list can go on and on.

There are some warnings already published in various manufacturers manuals. ie:

Do not operate without an antenna,

Do not operate your radio in the bath.

Driving and operating your radio can be dangerous.

I learned long ago electricity and water do not mix and remember during my drivers education class I needed to pay strict attention to my driving. Here I am applying my knowledge I learned during some past studies and life experience. ie: have driven by some blasting sties and read warnings of not to transmit in this area. So I shit down my radio until I read another sign that stated I was out of the blasting zone Yes the radio transmitted energy can set off blasting materials.

>Basic DESIGN PHYSICS for MOBILE OPERATION are, or do they not have any
>testing facilities for their products.

Take this example: Lets try two other brand products say we use Kenwood 2 meter radio and a Yaesu 6 meter radio. Set the Yaesu 6 meter transmitter at 20 watts out. Now directly connect it together with a coaxial jumper to the Kenwood 2 meter radio and transmit the 20 watts right into the antenna connector of Kenwood 2 meter radio. OR place two antennas about 3 feet apart like a 5/8 wave 2 meter antenna attached to the Kenwood and a tuned 6 meter 1/4 wave onto the Yeasu and transmit with the Yaesu

The question is will the receiver of the Kenwood survive this treatment without damage ? Can you actually transmit 20 watts of RF energy into a Kenwood transceiver and expect no damage to occur ?

I'll bet you can not with any Icom, Kenwood, Yaesu, Alinco, TenTec, ADI, or any other amateur radio product on the market today to name a few.

The 706 series with closely mounted antennas is not any different at all.

>any WARNINGS of this "OPERATIONAL Caution" (more like "DEFECT")in any
>any ICOM ADD's

Have not looked at either of these manufacturers manuals do they warn you about close antennas and possible damage ? Do they warn you a 5/8

wave 2 meter antenna is resonant on 6 meters also?

I suspect manufacturers could take measures like building traps for every possible antenna combination. They would be huge as they have to handle the legal limit of 1500 watts or your would have a design issue again. This would make radios would be large in size and more expensive.

>My goodness, even my OLD Moto rig had an RX short out when you used >high power.

No amateur products marketed today I am aware of have such a device. Nice Idea but such a device would not work well in a multi station set up like Field day or EOC operations. Every time a transmitter comes on line, your receiver antenna is disconnected and you are offline can't receive a thing until the other transmitter goes off the air. Calls to manufacturers asking how to disable this device would be rampant. In these types of operations I have seen and set up antennas are generally separated. Why should a mobile installation be any different?

for an example take the reverse polarity diode installed in many radios today. If you run without fuses guess what, no protection. (Yes have seen a few of those to, operator thought the diode would do the job alone with no fuse to blow. Have to assume he did not follow published information in the manual about using fuses.) Will the diode blow the fuse fast enough to really protect the radio from damage ? Most times it works, but have seen times where the radio was damaged even though the fuse blew. Maybe manufacturers should add a circuit to disconnect the radio from the power lead in the event the operator mistakenly plugs the radio into 117 volts AC. Could place a Coca Cola detector inside in the event some was dumped into the radio to make sure it was power off in the event of such an accident.

Good installation and operation practices will take care of this issue.

I do not believe I can transmit directly into a receiver front end and not cause damage. I do not believe that the RF energy radiated from an antenna 1 foot from another magically does not affect the other nearby antenna or equipment attached to that antenna.

Again I am not trying to be arrogant, condescending or disrespectful to you or others who may read this. None of this means I know more than anyone else, actually I likely know much less. I do take responsibility for myself and my amateur radio installation. I do read the published warnings in the operators manual and can make some assumptions about the proper installation and operation of my equipment with my limited background learned during my life's experience and studies in amateur radio..

It does not make any difference where I work as all of this is my personal belief and opinion, not my employers. I am just an

interested participant in the newsgroup discussions.

Some will say evey radio made is superior to all others. The 2500 does actually have better intermod protection but its audio is typical Yaesu which is, kinda crappy. The IC 2100 has a 10 db attenuator and the best audio quality of all but a certain xistor likes to blow easily. The Kenwood 261 has other problems , etc., etc., etc. You have a decent radio that will give you excellent service so don't worry about opinions of others like "Dowdy". He thinks it cute to set his computer clock a day ahead to keep his posts on top. That alone should place his opinions in the proper perspective.

3771. FS: Collins S Line with 30L-1

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-25 00:00:00 UTC
From: w8mw@aol.com
Message-ID: <19991125171530.12252.00000351@ng-xa1.aol.com>
Source record: 93397

FS: Collins S Line with 30L-1 Amplifier

Famous, later model Collins S Line with 30L-1 Amplifier for sale. Includes 75S3B Receiver, 32S3 Transmitter, 516F-2 AC Power Supply, 312B-4 Station Console, 30L-1 Linear Amplifier. All equipment is working and on the air.

75S3B Receiver: Winged emblem, rare 500 cycle cw filter, original manual, sn 15621. Condition is good to very good. Front panel is beautiful with hard to see paint wear left of main tuning control, cabinet has minor scratches. Has worn but functional AC line cord. Slow agc was not functioning, made temporary fix by tacking a capacitor to the agc switch. Small paint bubbles inside S meter.

32S3 Transmitter: Winged emblem, original manual, sn 13899. Condition is good to very good. Front panel is beautiful, cabinet has minor scratches. Has what appears to be factory mod (AM S3-1) that enables AM transmit with a slide switch accessible under the lid

516F-2 Power Supply: Round emblem, original manual, no modifications, sn 62951. Condition is good. Front looks great, some scratches on sides and top.

312B-4 Station Console: Winged emblem, original manual, sn 55886. Condition is very good to excellent. Have never used the phone patch.

All of the above equipment was in posession of original owner until 1997 when it was used as a trade-in at Universal Radio in Columbus, Ohio. Prior to trade-in, periodic maintenance had been done professionally.

30L-1 Linear Amplifier: Winged emblem, bound copy of manual, customized Samsonite luggage carrying case. Sn appears to be 22195. Condition is good. Front panel very nice and clean. Trim ring and cabinet have scratches, may have been repainted poorly. Includes matched set of four Cetron 811A tubes purchased this year from Surplus Sales and still in boxes.

I have the equipment setting side by side and the appearance is dramatic. Nearly six feet of Collins. Some of the units come with original shipping containers from Cedar Rapids, complete with wooden frames. Also includes various cables with rca connectors, type n rf coax connectors, etc.

Terms: This will be sold as a package only. Won't part out so please don't ask. Prefer local buyer (Cleveland, Ohio area) who can personally examine the legendary looks and fine operating condition of this classic Collins radio station. In the event shipping is required, professional packaging and shipping will be arranged at purchaser's cost. Purchase price not including shipping $2575 money order or bank check.

It's going to be a merry Christmas in somebody's shack! 73, Mike W8MW

One Radio Shack I visited was run by another Ham. I went in one day looking
for a lightning arrestor for a VHF/UHF vertical antenna I got at a ham fest.
When I asked him if they had any, he responded with a forceful l "NO!"

His answer stopped me dead in my tracks and when I looked at him, he smiled
and said, "Hey, You have questions -- We have answers."

.....
.....

Our local Radio Shack is run by a young husband/wife pair who have little clue
about anything electronic. I was in there one day to pick up a switch when another
guy came in. He said that he thought his car radio was on the way south and
asked for any AM stations he could tune to test it.

Between the hubby/wife pair, they came up with: WARX -- 106.9 Mz,
WAYZ -- 101.5 Mz, WFIX -- 95.7 Mz, and WFKJ -- 102.5 Mz.

I had to leave the store.

Hi, Larry,

The HTX-242 is a decent radio. It's one of the few that will fit in
the desired compartment in my car and it's worked well for over a
year. I use it with a 5/8 2-meter RadioShack magmount. Also, I
always receive good comments about the audio.

M2057.

> Results?

Works fine.

> What tubes have you directly substituted for the 8950 with mods?

6LF6, 6MH6, 6LX6, 6KD6, 6JS6.

> What mods did you have to do?

Filament rewiring and sometimes additional tank
capacitance. If you're using the tall versions
in an amp where the tubes are vertical, you have
to lower the board or chassis where the tube
sockets are and lengthen the plate leads. Some
of the amps where the tubes are horizontal
require mods to fit the longer tubes, and some
won't work with the longer tubes at all. The
long tubes are 5 inches long, and you need an
eighth of an inch of clearance above the plate
cap. The 6KG6/EL509 that's reasonably priced
is one of the tall types.

> Results?

They work fine.

> I'm looking at modifying a Palomar 12v Amp designed for one 8950 driving
> three and wish to make the mod that generates the maximum output that is
> distortion and garbage-free using the existing power supply (changing caps
> or
> other small components OK, changing transformers is not).

None of the sweep tube amps are especially clean, so don't
expect perfection when it comes to distortion. The crap
content in sweep tube amps is usually 5 to 10 dB higher
than in an equivalent ham amp that uses transmitting tubes.

The 6KG6/EL509 is the most powerful and is available for a reasonable price, but it also requires the most effort to make it work. The sockets have to be changed. They use European 9-pin sockets--not Novar sockets. You can force them into Novar sockets, but the sockets will never hold the thinner-pinned Novar tubes afterward. The 6KG6 is a tall tube; you have to make sure you can fit them in without shorting the plate cap to the chassis.

Personally, I wouldn't spend any money or time on a 12 volt tube amp. They're big, noisy, wasteful, unreliable, costly to repair, outdated piles in my opinion. I've had two 1-driving-3 sweep tube mobiles: a Palomar 310M, and a PAL 350MDX; I converted them both to base amps by gutting out the unreliable DC to DC power supplies and using 117CX Swan power supplies that are separate from the amp itself. The power supply connects to the amp through a jones plug (similar to the Palomar 300A design). With the stock power supply gone there's plenty of room for a fan to help keep the tubes from overheating.

If you're curious and just can't resist making that amp work, buy the cheapest tubes you can get ahold of, play with the amp until you've learned all you can, and then sell it for as much as you can. If the switching tran-sistors in the power supply are still good, and you didn't have to pay too much for the tubes, you may just be able to come close to breaking even when you sell it.

If you need them, I have 6JS6As that will work in that amp (once you rewire the filaments) for $20 each. They are NOS, matched for gain (transconductance) RCAs in their original 1966 vintage boxes. The "A" version of the 6JS6 will produce as much power as an 8950, but has a lower plate dissipation spec. What that means is you have to be more careful when tuning the amp or the tubes will overheat. When tuning the amp for the first time you should have the cover off so you can make sure the peak power output happens before the tuning caps reach either minimum or maximum capacitance. In other words, you want to make sure you can see both sides of the peak before the plates on the air-variable caps (there is one in the driver stage and two in the output stage) are either fully meshed (maximum capacitance) or fully unmeshed (minimum capacitance). If you don't do that there very often is a false peak at either the minimum or maximum capacitace position that makes you think the amp is properly tuned, when in reality the output isn't at maximum and the tubes are overheating because they have to dissipate too much power.

Here's an applicable case history: I put a set of my
6JS6As in a Palomar Skipper 300. The Skipper 300 is a
1-driving-3 amp that is similar to the Palomar 310M
mobile amp. When tuning it for the first time I saw
both sides of the peak when tuning the driver cap, but
both output stage caps ended up at their minimum capa-
citance positions at what seemed to be maximum peak
(modulated) output. The maximum peak output was about
550 watts (measured on a powered, peak-reading meter
feeding a dummy load). I noticed that it only took
about 10 seconds of key-down time before the tube plates
began to glow. I knew the tubes wouldn't last long
running like that. I experimented with different
techniques to make the the output tank circuit (the
two air-variable caps and the coil in between them)
resonate with the caps near their half-meshed areas.
I didn't want to cut plates off of the caps, so I
tried other things. In the end, adding 30 pF to the
antenna load cap brought both caps back to near their
half-meshed areas. In other words, I could see both
sides of the peaks of both caps. The peak output
went up to 620 watts and it takes 2 to 3 times more
transmit time to make the tube plates glow. The amp
went back into service and the customer is happy with
it. The customer runs it on low (420 peak watts) to
keep the tubes cool and his neighbors happy.

> Thanks for all who have already offered helpful info!

You're welcome. I hope this helps.

I have the same question.... I have 3 ft-50's now and the newest one
doesn't mod the same as the older ones.

Source record: 93422

Hi again,

Thanks for the responses. Well, no need to return the unit, there is nothing wrong with it. It works great, except that the stock mic unit seems by design to produce transmit audio that is very peaky and overdriven sounding in the midrange area. A look at the mic shows that they have created lots of gain and then coupled it with a small value cap resulting in DX type audio that is not really necessary or particularly pleasant for normal FM repeater use. I grabbed my old mobile mic and wired a new connector on it and the rig sounds very smooth and natural. A larger coupling cap and some gain reduction in the stock mic should clean up things. I just thought someone might have info on the other variable pots. One of them is most likely an S-meter adjustment, but I don't like to touch adjustments without knowing what they do.

Thanks again for responding,

Rob C.

Hello,

I have a Yaesu FT-900/AT. In the manual it mentions using it to tune a whip antenna while mobile...it really doesn't elaborate on the topic but I didn't think it was able to tune a whip...

Anyone tried this or is this just not true?

Thanks,

Jason S. Hulet

If he just got it yesterday as he stated, why not take it back to the dealer
where
it was purchased and exchange it for another ...

I have had a few items bad right out of the box, and the dealer (HRO) always
exchanged it for a new one.

Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.swap,alt.music-lover.audiophile.hardware

Please do not respond to the posting address or newsgroup, please instead reply by email to rolandman1REMOVE@aol.com but be sure to first remove the word "REMOVE"

Happy Turkey Day :) I am an electronic musician seriously searching for old electronic music-making equipment from 1950's-1990. I will consider anything, working or even broken, in any shape.

Old synthesizers or keyboards
Drum machines
sequencers
vocoders
MIDI modules
effects processors (racks or stompboxes)
any old patchable / modular synth (full system or component modules)

Anything by Moog, ARP, Roland, Oberheim, Sequential Circuits Inc, Buchla, Serge, EMS, EML, Aries, Paia, Korg, Simmons, Mutron, Maestro, or others. The more knobs, the better. Especially into unusual items good for making strange sounds :)

If you have anything you would consider selling or trading or know someone who could, please email me at rolandman1REMOVE@aol.com but be sure to first remove the word "REMOVE". :) Please also be sure to include price, condition and location as well as your phone number if you'd like.

Thanks in advance! Apologies if this message disturbs anyone.

Examples of things I am looking for:
Studio Electronics MIDImini or MIDImoog
Lexicon Jam Man guitar effects
Electro Harmonix Micro Synth / Bass Micro
Interesting filters, ring modulators, phasers, flangers
Roland Space Echo RE-501
Korg Stage Echo SE-500
RSF Kobol Expander II
Pollard Blue Syndrum
Roland MPG-80 Programmer for Super Jupiter
and much more!

3809. Re: how is they dx70th? compere to icom706mk2

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-25 00:00:00 UTC
From: Anselmo Stiffan <anselmos@freesurf.ch>
Message-ID: <383D17E9.D0560CC2@freesurf.ch>
Source record: 93504

I have a DX70 and always got excellent reports on modulation quality.
Had however a spurious emission on 18MHz band and higher. Alinco
suggested to replace a capacitor on the PA but it didn't work. The
problem is due to low gain on power transistors which can only be cured,
as I did, with a non-inductive resistor of 200 ohm at antenna output.
The receiver is very good and compare very well with my IC751A.
If you are not a fan of V-UHF, the DX70 is worth its price.

Source record: 93513

I was first licensed as a teen, WA1NQX, in New Hampshire.

I am guessing it was 1969 but I am not certain. Is there a site
online where the history of a callsign may be traced?

If not, does anyone out there have some callbooks from around
that time in which they could look it up, please? (I let my license
expire when I was in college so there isn't a continuous link to
follow.)

I am starting to explain radio stuff to my son and wish to place
my start in the hobby historically.

- Thanks! & 73, DavidC K1YP

From: Steve Walsh <nordeste@francomm.com>
Message-ID: <s3qndkcrrrp84@corp.supernews.com>
Source record: 93519

Folks I have a FT-301D and I am sure that you all have problems burning out the display. I have a home design that works with a 555 timer circuit that pulses the display that reduces the on time of the display but it is pulsed fast enough that you can not see the pulsing. This in turn cures the problem with the display burnout by reducing the on time of the display. Stay tuned and I will post a .jpg with the schematic, parts and how to install this mod. Then you'll never have to keep replacing the displays all the time. If you like send me your e-mail and then I will e-mail this mod to you. Also visit my website at www.francomm.com/home/nordeste

Date: 1999-11-25 00:00:00 UTC
From: Larry Klodt <llklodt@home.com>
Message-ID: <8ed%3.20545$m64.766799@news.rdc1.il.home.com>
Source record: 93520

Greetings all! I am in the process of studing for my Ham Ticket, and bought a Radio Shack HTX-242 since it is on sale. Since I don't have my ticket yet, I can't try it out so was just curious f anyone has any comments on this radio? I will be using as a mobile, and with the extended receive range will have all the freqs punched in that I will use in my other hobby, railfanning. Thanks much for any comments!

LARRY :-)

3826. 8950 Substitutes - I'm Confused!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-25 00:00:00 UTC
From: DavidC <eDoc@netzero.net>
Message-ID: <s3qok3l7rrp13@freenews.remarq.com>
Source record: 93521
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.cb

I recently asked about substitutes for the incredibly costly
8950 tube. I found a discussion on DejaNews about this and
there was a suggestion that 6KG6A's are excellent.

I looked closely at the facts and there seem to be several
significant differences between the 8950 and all of the other
suggested substitutes. I don't understand how a 6KD6 or
6KG6 could be "forced into" a 8950 tube socket.

The 6KG6 is a Novar and I suppose the 6KD6 could fit in the
6KG6 socket but I don't think the 8950 is even close.

I think maybe folks meant that after the amp was modified from an
8950 to a 6KG6 one could substitute a 6KD6 for the 6KG6.

Can someone clarify please?

- Thanks again & Happy Thanksgiving to all! DavidC K1YP

Hi -
I have for sale as a package the following:
Kenwood TS-870S S/N: 70500197

Stock this radio is all filtered up. the Queen of the current line of
Kenwoods.
Learn more about it here:
Kenwood Web site - TS-870S

Kenwood SP-31 matching speaker

Astron Power Supply SS-30 M

All the above are in cosmetically and functionally perfect.

Also included is the package beside the hand mic. is a Heil HM-10 Dual
(#4
DX and #5 Reg. Elements) Mic. with the kenwood cord. However I am
keeping
the foot switch. So you would need to pick up a FS-1 or HS-1 switch.
Now Iv had the Mic. since I was a teen and my last call is engraved on
the
Heil only. (Yes I quit doing that years ago). Just so you know.

Please view the items here:
http://www.wanfear.com/~rich/ts-870s.jpg

My price is $1725.00 shipped in the lower 48
I would consider offers on price but no trades please.

3830. ten tec scout stability

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-25 00:00:00 UTC
From: fjones@ionet.net
Message-ID: <81jpud$q0k$1@ionews.ionet.net>
Source record: 93525

In an ad in a current mag, I think QST, ten tec brags about the freq stability of the VFO of the scout.

Has the design been changed? Many (but not all) scouts I have worked in the past drifted pretty badly on CW.

I hope that ten tec has fixed the problem because the scout otherwise looks like a neat little rig despite having to use plug-ins to change bands. The CW keying sounds great and is very easy to copy if it just didn't wander all over the spectrum.

Some time ago I called ten tec about the problem, hoping that they were going to correct the problem, but the tech I talked to said no; he further stated that "it was only a problem on fast CW"....whew!

Source record: 93528

Good luck on your ham ticket and you may want to take the on line tests at:
http://w5ac.tamu.edu/ham-exam-v2/ham-exam.html
Here you can take a practice test or just view the test pool questions.
As for the 242, it is a very good xceiver. Decent intermod protection, some
good features and even two VFO's . I'm sure you've noticed the rather
chincy mike but it does seem to work ok.

This sounds like a good radio from everything I have seen.
I have a question that I can't find the answer to. What Tx
power does the thing put out when it's powered by the
optional 2-AA cell battery pack.
Thanks in advance.

Will sell this to the highest bidder.....Don't care for E-Bay

This is made by Superior Electric Company out of Bristol, Ct.

Type 236-3Y
Spec. BP57509
Rated 60 amps
Input V. 480/240 3PH
KVA 8.7

This is a rugged Variac and in excellent working condition.....If you need any more info please e-mail or call at (508) 821-2993.....WZ1U Steve / Lakeville, Ma.

3838. Re: What do you think of the Radio Shack HTX 242 Two Meter?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-25 00:00:00 UTC
From: AB7RS <tglenn@imt.net>
Message-ID: <383D7430.76CE@imt.net>
Source record: 93533

First off you couldn't have had a 242 in '95 because they didn't even
make them yet!!!
Secondly the first mobile 2 meter rig rat-shack made was the HTX212
and it had a host of problems like not being able to program the
extended recieve into the memory channels and a front end that is
munusable in high RF environments.I fought with RS for 6 months to get
my money back.Finally they admitted this radio had been discontinued a
few months after it was introduced due to the problems with the front
end.The replacement was the HTX242 and while it had some better features
the front end was still crap so I finally got my money back and got a
Yaesu FT2500 for $199-it works great!

3841. (/\/\) FACTORY RIB BOXES & CABLES "NEW"

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-25 00:00:00 UTC
From: msisco9939@aol.com
Message-ID: <19991125142205.03956.00000620@ng-fi1.aol.com>
Source record: 93536

Yep:

I still have a few left...These are Factory New Motorola RLN4008B
Rib Boxes and acc'y from $165.00 For Professional Use Only.

Picture can be seen @

http://www2.4dcomm.com/metrotech/mrbox.jpg

You can have "Everything" in the picture for $195.00+$8.00 for shipping
and handling. Or if you are on a budget I can sell these items seperately.

Brand New RLN4008B Rib Box $165.00 + $ 8.00 for shipping and handling
Factory Power supply $24.50
Rib to Computer Cable $29.50 (Made with Premium componets)

Lots of Factory Programming Cables too for the HT1000, VISAR
SABER & Astro-Saber from $135.00ea

With respects to Clones, be aware, some Clones do not have Dual
Power Support Systems, and can prove fatal on some High End Motorola
radios. Restoring a radio corrupted by a programming failure can cost
ya as much as $379.00 to fix. Earlier radios like P100's, HT600's are NOT
as problematic as Later Model Motorola products, so again, beware. Lots
of Horror stories availible on request.

Most Clone Cables are pretty good if they are built well and one does not
need the Test Features as they do not have Electroincs Inside of the majority
of them (Astro-Saber Excepted) so if one is on a budget, you can make your
own considerably cheaper, but the Home Made Rib boxes and some clones
can put your radio at risk......

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If immediate
shipping is desired) or a Personal / Business check is A-OK too if you do not
mind a Short Shipping Delay due to bank processing time. This is required only
the first time or two as once you are in the data base, PrePayment is no longer
required

Monty

3842. Re: 8950 Substitutes - I'm Confused!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-25 00:00:00 UTC

Wow! I think I am getting less confused ... a small Thanksgiving miracle!
;-)

Now, can anyone tell me from direct personal experience what tubes they
have directly substituted without mods for the 8950?
Results?

What tubes have you directly substituted for the 8950 with mods?
What mods did you have to do?
Results?

I'm looking at modifying a Palomar 12v Amp designed for one 8950 driving
three and wish to make the mod that generates the maximum output that is
distortion and garbage-free using the existing power supply (changing caps
or
other small components OK, changing transformers is not).

Thanks for all who have already offered helpful info! 73, DavidC K1YP

3848. FS: ICOM IC-765 HF

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-25 00:00:00 UTC
From: jdinkel@mum.edu
Message-ID: <81i3h2nob1@nnrp1.deja.com>
Source record: 93575

Have IC-765 in excellent condition, s/n 3192, with dual 500 Hz cw filters, optional AM filter, speech board and rack mount handles. Aligned and checked out by ICOM a few months ago. Has PBT and transmit mod. As you may know, the 765 is known for extra clean transmit signal and very quiet receiver. Specs exceed or match more expensive rigs such as the IC-775DSP. orig. cost over $3000. "Normal" market value today is over $1100 (which I originally listed it for last month on ARRL web site). Also includes SM-6 mic. Worked great during sweepstakes last week. My favorite radio because of its "feel" but need $. Yours for
$990.

3849. Re: IC 706 .. Antennas too close, 2 meter damage?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-25 00:00:00 UTC
From: "ab2etXXXmy-deja.com" <ab2et@my-deja.com>
Message-ID: <81i8pf$r6s$1@nnrp1.deja.com>
Source record: 93576

Gary,
Sorry for the delay in this message...
Let me get this Right according to you lengthily statement the ROOT
Problem is It is not a design fault of the radio but good old
physics.
Guess what? Gary I totally agree with you it is BASIC PHYSICS.

It look like the Engineers working for ICOM somehow FORGOT what the
Basic DESIGN PHYSICS for MOBILE OPERATION are, or do they not have any
testing facilities for their products.

Please correct me if I am wrong:
(A) The IC 706 and Derivatives ARE MOBILE Radios?
(B) The average Mobile (Car) is smaller then the ICOM Mobile Home
(C) All of the above are correct

If the 706 "is" a Mobile rig then it is the RESPONCABILITY of the
DESIGN ENGINEERS and NOT THE Paying "USERS" to provide the DESIGN that
will SAFELY AND RELAIABLY work in the STATED OPERATIONAL ENVIROMENT.
I think its time that ICOM fessed up to the reality, start building
them STUBS Gary.

I guess that it is too much to ask for KNOWLEDGE in DESIGN...

I hope that every USER who has a problem with this FLAWED DESIGN takes
action to correct this DESIGN DEFECT, to bad that we do not have some
form of federal agency RECALL like in the auto industry.
My goodness, even my OLD Moto rig had an RX short out when you used
high power.
If I had the PRIOR KNOWLEDGE that this DESIGN FLAW EXISTED, my hard-
earned dollars may still be in my pocket, at best to date I do not SEE
any WARNINGS of this "OPERATIONAL Caution" (more like "DEFECT")in any
any ICOM ADD's

Oh and Yes I do Own a "Physics Defective" ICOM 706 MKII

BTW are you not the Gary Fiber that works for ICOM?

Source record: 93586

I'm looking for a source for this capacitor that is used in an old VHF power amplifier. It is used in conjunction with a power transformer for a regulated a.c. source. The parts list states the value as 3.5 mfd, +/- 6%, so the value must be fairly critical.

73 and thanks for any info.

I also have a W32A that has this same issue. It's most likely a common
attribute of this type of metal-backed radio. I've heard that other
popular hand-held dual-banders do not have this problem, particularly if
they have plastic cases. I ended up mounting the radio in a MAHA
booster dock and using it mobile with a speaker/mic. By the way, the
low power setting is only 500 mw, and there is no intermediate level
without going to the 2W battery (not the BP-173 that it comes with).

By the way, it seems to matter whether you are running VHF or UHF. The heating occurs on the opposite side of the back of the unit when you change bands...

The Yaesu FT-2500M is far superior and can be had used for $140 up. It
covers all the RR frequencies.

Lets see I don't recall being an asshole and mentioning your name in any posts. It's November 25th and that's what my machine is set to. If the audio on a 2500 is crappy you must have a serious hearing problem. I have owned 4 2500's. Their performance has been excellent. I don't give a tinkers damn if my posts are on top. I suggest you look at the date setting on your computer.

All unitys are plus freight charges. If interested and price is not right... make offer... Need the space.
Regards and nice Holiday! Dave - Darlington, SC

3891. FS/FT: Drake C-4

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-26 00:00:00 UTC
From: wabate@erols.com
Message-ID: <38411f0b.16833890@news.erols.com>
Source record: 93439

I have a Drake C-4 console in good condition. The wattmeter, ID timer and the clock work fine. I have the remote antenna switch which is in fine condition. The remote power switch is homebrew. Its about the same size as original with the 120VAC and 220VAC outlets and power relay. Nicely done. All plugs are included. As far as I know everything works fine. The cabinet is in good condition with some minor scratches.

I am looking for a Collins 32S-? and power supply in trade +/- $.

73,
Bill Abate, K3PGB

3904. FS/WTT: Drake R-4C Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-26 00:00:00 UTC
From: daydream@wolfenet.com
Message-ID: <383e3a7a.1353918@news1.wolfenet.com>
Source record: 93452

Hello. I have an excellent Drake R-4C that I'm considering trading
for a solid state receiver. I'm not a ham but very much enjoy
listening
to them, hence my ownership of a R-4C. Lately I've been getting
the bug for MW DX along with BCB and UTIL listening.
I would like to get a general coverage solid state unit such as a Icom

, JRC, AOR, Yaesu, etc. I will consider ANY solid state unit, also
the Drake tube SPR-4. Up / down cash trades are ok but I am
mainly looking for a straight across.
As most of you know the Drake R-4C is considered by many to be
the ultimate amateur band receiver regardless of price.
Check out: www.sherweng.com/ham.html for more info.
My Drake is in excellent physical condition, the face is near mint and
the knobs are very good. The case is also in near mint condition.
Very nice looking radio! The chassis is in excellent condition.
The radio has the stock xtals installed and is both sensitive and
selective across all bands. Unit works excellently except for a
"performance mod" that the previous owner did. I have no idea
how this mod works but it doesn't distract from performance.
Please email me for pictures. Thanks.

>I have the same question.... I have 3 ft-50's now and the newest one
>doesn't mod the same as the older ones.

Which "mod" are you talking about? The MARS/CAP expanded TX is just
a solder jumper - has that changed on the newest unit?

Or are you referring to unblocked receive (including cellular phone)?
I've read that the lastest version of the FT-50 has a different CPU and
it's impossible to get it to allow unblocked receive.

(The change to prevent receiving cellular shouldn't bother the original
poster, since he only wanted MARS/CAP operation.)

Try the Alinco DJ-V5th.....you can get it for about 239 and it is a dual band with 5 watts out of the box, plus if your into this kinda thing, you can modify it with the snip of a wire to receive from 76 - 999mhz including fm and tv broadcast bands with wide receive. It also doubles as a scanner with a 200 channel memory with alpha tags! I love mine,

Our local RS changed over to the sliding pegboard racks to fit more of the little parts in less space. I walked in and asked where the MOV's were - blank stare from the YL. After I slid all the shelves in every possible configuration, I showed the girl what an MOV was. She didn't care, they make far more comission on the cell phone sales.
But I do need to have an RS around for the little stuff I don't want to wait a week for or a $25 minimum order. And my little boy wants an RC monster truck.

Hey - GREAT last name!

What's the best? NO ONE here can properly answert that question for you, Bill - because we have no idea what's happening in your neco o' the woods.

So...join your local amateur radio club. Find out what's available in your area. THEN and ONLY THEN will you know what band(s) you'll want to be operating on with your first radio.

Contact the ARRL (Web site or telephone number) and find a local club. You'll be glad you did.

Great ! glad it is working.

Others in this thread have experienced troubles either by installing
antennas too close together or some other reason.

I also had no problems to date but did measure 20 watts coming back
into the 2 meter antenna every time I transmitted on 6 meters at 100
watts when I use a 5/8 wave on 2 meters.

MY 1996 Ford Ranger has the HF whip on the left rear corner of the
bed, the 6 meter antenna on the left front fender, 2 meter 1/4 wave
roof mounted and a 440 antenna on the right front fender. It looks
like a porcupine :) with all the antennas mounted. The 706 MKII has
been fun though I am not real active on HF. MY main activity is on
9600 baud packet. I have a 2 meter and 440 station running under
linux that is networked to this computer. The packet station is in a
shed about 100 feet from me.

An amateur radio issue I need to solve is a problem with the 2 meter
9600 baud station. The station is clean for spurious emissions. When
it transmits data it appears to overload a voice repeater front end
that is 20 KHz away and down the 2 meter band about 5 miles away. My
output power is only 15 watts here. This shows up as blocking weak
signals right out of the voice repeater receiver. I think the trouble
is their problem maybe modulation acceptance of the receiver is to
wide or too broad filter in the receiver. I am observing some self
imposed quiet hours until we resolve the problem.

Some times amateur radio can be most frustrating

Message-ID: <19991126124830.15596.00000507@ng-fw1.aol.com>
Source record: 93474

I recently purchased and installed the CK-18 WARC Bands Addition kit in my TS-180S xcvr. I am having trouble getting it to work. At 18MHz it does not display the first two digits of frequency, and at 24.5MHz there is no display- just a line of decimals. In looking at the schematic for the rig, I see there are a large number of diodes in the display section and band selection PLL circuit which were not a part of the (11) I installed with the kit. I also found two omissions in the instruction sheets, one the installation of D22, and the other omitting the installation of (4) transformers on the Coil Pack board.

Is there anyone out there who may have done this addition years ago and can offer some advice?

Thanks,
Martin

I've fixed a number of TS-440 PLLs.
(My own several times...)
It is a royal PAIN IN THE A**!!!
It takes a LOT of time to do it well!

I wonder if you would mind paying $500 to fix your radio?
(I didn't think so...)
So if you DO find a repair shop willing to fix all the PLLs, Give them a tip!
There is one fellow on the net that is an authorized repair facility, (5-Land)
and has assisted me for free. I am ashamed to admit I have forgotten his name.
But I would not hesitate to recommend him.
I'll bet he will answer this post too!

Back when this problem first surfaced, Kenwood would replace the PLL board
and in doing so "Fix all the PLLs". But they have long since stopped that
practice.
(Even though THEY are responsible!)

Source record: 93480

For Sale:

Kenwood BC-6 fast desk charger. Charges PB-21
and PB-21 H battery packs, as used on the Kenwood
TH-21 /31 /41 series of HTs. Holds two batteries,
charging one and then the other. Takes about an hour
to charge. It can also be used to power the radio
for base station use. With manual for $ 70

Kenwood SMC-31 speaker microphone. Used on the
TH-21/31/41 series of HTs and some other Kenwood
HTs. This one is almost like new for $25.

Kenwood DC-21. Converts 13 V DC to 8 V for the
TH-21/31/41 series of HTs. Plugs into cigarette lighter
and powers the HT. In box, like new, with manual. $ 25

Kenwood SMC-25 speaker mic for TR-2500/2600
series HTs. $ 22

Kenwood SC-15 soft case. I don't remember what HT
that it fits. Maybe a TH-78 or TH-75. Check your
manual. New, still sealed in the package, never
opened. $ 15

Kenwood VB-2530 two meter amplifier. Up your HT
power to about 30 watts. Useful on most any HT.
Like new, with original box and manual. $ 70

Prices do not include shipping from Florida.

Thanks.

73,

Ken, W8EK

George

The buyer simply pays for a Bank Check in US Dollars, and they bank issues the chekc which he can Airmail .
The seller "Hi-Lites" USD on the check, which will be dranw on a bank either in NY or CA.

OR
Buyer can wiretransfer funds to sellers bank account.

I have successfully done both here in Charlotte, NC. No problems at all. Oh, on a wire transfer, sellers bank may charge a $20.-25. fee. A similar fee is paid by buyer at his bank.

Greetings,

Can anyone provide me with a schematic for a two tone board for a plectron R8000 series reciever? I have the R8000 and two 2-tone boards but need to recalibrate them for my frequencies. A friend has a tone generator, etc. needed
to do the work, but we need the schematic. Any other info that you think might
be helpful would be greatly appreciated.

Please reply to glenr@actel.com as well as here in the newsgroup.

Thanks in advance for any help,
Glen

Jason;
It can tune any Antenna as long as the VSWR is below
3:1 (Actually I've found that it will correct mismatches up
to 5:1 most of the time.) But it's guaranteed up to 3:1.
Try it out.
Dave...

It's 8.65 Mb but there must be something wrong with the file.
I tried IE4, Navigator 4.7, and Opera. Each time the download got to
453 Kb and stopped with the browser saying done.
I can't find it on the webpage because I don't understand the language.

>I hope it helps you.

It would, since I have a problem with mine.
Can you help?

3951. Re: TS-440 Help

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-27 00:00:00 UTC
From: Clif Holland <avvid@onramp.net>
Message-ID: <KET%3.199497$Ow5.278889@dfw-read.news.verio.net>
Source record: 93249

Repair rates on Kenwood TS440's VCO's

VCO-1 $225
VCO-5 $135

I only repair what the customer wants when it comes to VCO's
because of the cost.

If both are done at the same time there is a $25 discount
because I don't have to align it twice(alignment is included
in each price). The price includes removing and replacing
all the affected components, cleaning the board, re-potting,
and alignment.

Repairs have a 30 day warranty.

For Sale: Motorola Saber I Secure - VHF w/Accessories

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=207518634

Model #- H99QX052A
Factory ID - H43YXN7139CN

12 channels
6 watt output
146-174Mhz
SECURENET-S capable
CTCSS/DCS/PL/MDC600/MDC1200 capable
Radio comes programmed to your specs

Radio Comes With:
VERY Good High-Capacity Battery (W&W Brand I believe)
Antenna
Remote Speaker/Mic - Model NTN6128C
Belt Clip
D-Ring Clip w/Belt Swivel Attachment

This unit is in excellent shape (but has some small surface scratches on front). It is guaranteed to be in 100% working condition. All included accessories (except battery) are genuine Motorola parts and all are in perfect condition. Selling because it is not needed anymore. Reserve price is VERY reasonable. Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=207518634

>Oh BTW It does make a difference where You work.
>Yes you are entitled to your personal belief and opinion, just as I am.
>But Please lets not try to make us believe that this is GOOD DESIGN by
>your mis-directed statements and allusions to "License Knowledge".

No it does not make any difference where I work. I am NOT here on ANY official capacity. I guess if in the business every thing I post becomes policy, or design criteria baloney there is no allusion here. I am sorry Steve but these are your plainly mis-directed thoughts and statements about my ramblings being any sort of policy. I am not a policy maker at my employers.

I do have a life too. I am a product consumer and amateur operator, and have a right to my own opinion. I am not always on the clock actually not being paid for any of this. It's my own time and my own opinions. And Yes I am amazed I am not always correct either.

I have no idea what you design. If I had problems with your devices being damaged by improper installation and operation. Then started pointing fingers at you for not using GOOD DESIGN. I'll bet you would also take exception. Or maybe your are such a good designer problems arising from poor installation and operation with your designs are simply impossible. If so congratulations on using excellent design practices. I am pleased to be able to discuss issues with you.

We will just have to disagree. I think a licensed operator should be knowledgable enough to handle a number of installation issues. The FCC does when you pass your exam then sign your license upon arrival.

Try operating a poor installation where they get involved, then tell them you do not know what is happening. I have to wonder if the amateur license would be on the line then.

I once had caller who installed an antenna in his attic, single story dwelling, was running 1500 watts and could not understand just why his radio would not stand up to the RFI being generated. The trouble was not a design or manufacturing fault, he just had too much RF close by. The trouble cleared during a test I asked him to preform in which he installed a dummy load. Sure sounded like RFI to me. He adjusted his installation by moving the antenna away from his station and the trouble magically cleared up. I often thought electronics was accomplished with chicken bones and black magic.

The products are designed with operating in mind. Every possible problem is not a product design problem.
I also pointed out to him he may be in violation of the RF radiation

standards we now all must meet. Some over 100 watt VHF mobiles are in violation and manufacturers do not warn you about that, so who's problem is it ? There are plenty of materials published on how to accomplish a proper installation.

You likely will not believe me when I say I have chatted with holders of an EE degree with an Amateur Extra Class who did not know what a dipole was. Come and sit a year in my chair and walk in my shoes. It does amaze me sometimes these callers are real quick to rattle off their personal qualifications.They are speaking from a higher level than I. I also understand every EE degree and Amateur Extra Class holder does not do technical aspects of radio. Many are satisfied with being operators which is just fine too. If I know the answer to the question I am quick to give it to them. If I do not know or am unsure I'll also tell them.

I am but only an Amateur Radio Advanced class operator with 15 years in the two way business. also had 6 years on the railroad installing and maintaining infra heat wheel bearing detectors, chart recorders, street crossing protection systems and line overlay carrier systems.

Yes my ramble a bit, I do not have a college degree like some. My academic capabilities are less than others, not quite on the same level sorry for being incoherent.

Actually studied vocational automotive in high school, what some call a gear head, did not get into electronics until community college in 1970.

Oh here is my call below, though by typing my name at www.qrz.com will suck that baby right out of the database. I do not have a personal requirement to post my call with every message I send.

Have a good and safe holiday weekend Steve, and forth coming Christmas and New Year holiday season.

Thanks for a exhilarating discussion
Best Regards,

The display is supplied for the silver can on the display circuit
board. Icom treats that can like an IC I know of no schematics for
that supply.

The W32A has two power amplifiers inside, also a thermistor to cut
back output power when it gets too hot. I do not know the temp
coefficient of the thermistor though. Remember at 50% efficiency the
other input power is still there and needs to be dissipated.

3965. Tailtwister blowing fuses

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-27 00:00:00 UTC
From: Rick Kissell <rkissell@execpc.com>
Message-ID: <384030d0$0$80461@news.execpc.com>
Source record: 93263
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

My Tailtwister has suddenly stopped working. It blows the 3A fuse in the control box when I attempt to turn it counter-clockwise. (But not clockwise!) When I press the brake-release and counter-clockwise levers with the leads to the rotor disconnected, it does not blow the fuse.

Any thoughts?

3977. Is the FT-847 *really* good on HF ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-27 00:00:00 UTC
From: brainiac@visi.com
Message-ID: <0wZ%3.368$Sz5.23600@ptah.visi.com>
Source record: 93275

My fifteen year old FT-757GX (an HF only rig) is failing on me and it is time to replace it. After looking at the Icom IC-7X7's, FT-920, and the FT-847, I thinkI want the FT-847. It will probably mainly be used on HF. I have seen a few comments on internet web sites that led me to believe it is just an O.K. performer on HF. Is this true ? Since I already have VHF/UHF gear, it would be better for me if it was just O.K. on VHF/UHF, and really a hot performer on HF.

3978. Help? Manual for RS Digital Sound Meter?

Craig,

I have the DJ-V5 also. I am very pleased with it, but I have not noticed the flashing frequency display. Would like some more info. about that it you find out anything.

I did expand the receive on it. I have the mod. and it is very simple to do. I will send it to you if you need it.

3986. replacement for IC 706

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-27 00:00:00 UTC
From: Paul Lantz <plantz@onlink.net>
Message-ID: <81q75vcrs1@onlink3.onlink.net>
Source record: 93284

I had a 706 that was destroyed in a break in. My insurance company has decided to help me replace it so I am trying to decide what with:

706 new model IIG with 440

Yaesu FT 847

what else?

I don't operate HF mobile so I don't intend to use this radio in the car. I do a bit of 6m so I want that capability. I also move the radio back and forth between house and cottage so one thing I like re new 706 is light weight and small size.

One thing I like about the 847 is satellite related features--but since I don;t have any suitable antennas/rotator/elevator this is just a novelty for the time being.

I would like the unit to be decent on HF which is mostly what I operate.

Curious about people's experiences with 847 and 706IIG units.

Wayne,

I just purchased a TS570SG about a month ago. My research led me to believe
it was the most bang for the buck. I am NOT disappointed at all with it's
performance. The DSP is great, Auto Antenna tuner works perfect, Setting it
up was a snap once I read the manual. You will enjoy it!

>
> Best Regards,
> Wes.
>
Hi Wes,

I'd start with a look at the power supply electrolytic caps, if they are original they are living on borrowed time. The varnish smell could be the electrolyte leaking from a failed cap. If a cap has failed, check the rectifier diodes too, as they may have shorted from the load of a shorted cap, if the fuse did not open promptly. Hopefully the transformer is ok, as that would be the most expensive and difficult item to replace.

Good luck,

Rob C.

>How about it? Can it be done safely enough?

Just don't drink it or take a bath in it. Otherwise if it
isn't leaking, leave it alone. The PCB scare is vastly
over-rated. You can't wash the can out well enough
to meet the EPA PCB standards (parts per billion),
so don't bother to try.

Either throw the Cantenna out, or live with it as it is.
I wouldn't throw it out. I've worked around the stuff
most of my life. I try not to get it on my skin, but I don't
get paranoid about it.

3999. Re: Radio Shack HTX-10 Receiver Specs.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-27 00:00:00 UTC
From: bill <bwiese>
Message-ID: <01bf3887$93281040$6c84c03f@bill_pc>
Source record: 93359

Vince -

[Also see some of my other posts in this newsgroup &
rec.radio.cb about the HTX10, modifications (actually
the lack thereof), etc.]

Service manual doesn't have any RX specs, just TX
specs!! (That is, no selectivity/sensitivity values,
phase noise measurements, etc.) They also left out
the schematic too (trying to resolve that).

Architecturally speaking (from the block diagram)...

The HTX-10 uses a double conversion receiver for AM &
FM modes (only). SSB uses a single conversion method.
After the 1st downconversion, separate receive paths
for AM/FM vs. SSB are followed until the audio stage.
The PLL is a single-loop synthesizer without any mixer
offset scheme - the full VCO loop frequency is fed to
the PLL's progammable divider.

For AM/FM modes, the 1st IF is at 10.695MHz, and the 2nd
IF is at 455kHz. [The PLL synth/VCO runs in the 38-40Mhz
range.] 1st IF stage has no IF amp gain stage and is
apparently present for the selectivity that is imparted
by the 10.695MHz crystal filter (unknown bandwidth). The
2nd IF at 455kHz has a Murata-style ceramic filter (prob.
3kHz B/W) and two gain stages before the AM or FM detector
and the audio stage.

On SSB, an input signal mixed with 38-40MHz PLL signal
to downconvert to 10.695MHz 1st-and-only IF frequency.
LC bandpass filtering and a crystal filter here are then
followed by four IF gain stages prior to product detection.
(The SSB product detector runs at 10.695MHz; there is no
2nd downconversion to 455kHz in SSB mode..)

Gary,
Not trying to be arrogant, condescending or disrespectful with my Comments But do they pay you by the word....

Best Job of diverting malarkey dancing that I have seen in at least 6 Months,

Did you ever consider a writing career?

Yes Gary you did your research well, Yes I am an Extra, and yes Gary I did study for my license a bit, and then some for my career.
All together that adds up to about 19 years in some serious classrooms, and then about 20 years in the real world making some very interesting RF equipment, the best one is still beeping and its a LONG-L-O-N-G WAY from HOME, and it still keep on chirping, and it is not intefering with any repeter, that is pride in workmanship sir.

BTW I did not notice your call?

Oh and BTW when I designed equipment for a living, I took PRIDE in my WORK and that PRIDE in WORKMANSHIP extended to the consideration of the operational environment that MY CUSTOMERS equipment will be working in, And Yes Gary that INCLUDED all of your RAMBLING EXCUSES.

IF ITS "COMMAN KNOWLEDGE on the USERS Part WHY IS IT NOT FOR THE Designers.
I guess that this is not a major or even a minor consideration at ICOM, this judging from the criteria that you listed in your mis-direction rambling statment.

Gary, are the following the Prime specified design criteria for ICOM RF Designers?

If yes I now understand why we are in this conondrum.
Its Simple they FORGOT BASIC RF ENGENERING PRACTICES and concentrated on the following:

BTW Gary I understand that the Pizza Oven makes for a great low cost high Temperature Testing Chamber, EUREKA, you can do the "Shake and Bake" test in it as well. Quick pass that info on to HQ, do they still pay For suggestions?

Oh and BTW I did read the MANUAL, can you please provide me and the Group the exact section that deal with this problem.
Can You provide the SPECIFIC section that lists the Minimum and Maximum Design Criteria that deal with the subject at HAND. Thank You..

Oh BTW It does make a difference where You work.
Yes you are entitled to your personal belief and opinion, just as I am.
But Please lets not try to make us believe that this is GOOD DESIGN by
your mis-directed statements and allusions to "License Knowledge".

WE THE CONSUMERS are NOT AT Fault, GOOD DESIGNS in ALL RESPECTS is what
we pay your employers for, NOT LAME EXCUSES.

And Yes Gary just like you I am just an interested participant in the
newsgroup discussions, the main difference is that I spent the Dollars
for what sounds like a POORLY DESIGNED PRODUCT.

And PLEASE Let's stay on TOPIC...

Again Gary,
Not trying to be arrogant, condescending or disrespectful.

73's
Steve

Another possibility is to use an escrow service, such as i-escrow.
They also accept credit cards.

I have done business with over 33 countries and have had problems with
delivery only in Indonesia.
Greedy bankers have put a fee of $15 on currency exchanges of any kind
or amount so the best bet is
to have the buyer pay with a money order in US dollars.

I generally use the mails to send items but for some countries in asia
and south america I would recomment
UPS. Some of the mailmen in those countries do their shopping out of
their mail bags. UPS keeps tighter control on such things.

No, I'm not worried about cell receive either.... if I were (which
I'm not) I'd use my Yuppi <G>. I'm just saying the "freeband mode"
acts a little different...that's all. The mars/cap mode is exactly
the same.

:
: Which "mod" are you talking about? The MARS/CAP expanded TX is just
: a solder jumper - has that changed on the newest unit?
:
: Or are you referring to unblocked receive (including cellular
phone)?
: I've read that the lastest version of the FT-50 has a different CPU
and
: it's impossible to get it to allow unblocked receive.
:
: (The change to prevent receiving cellular shouldn't bother the
original
: poster, since he only wanted MARS/CAP operation.)

"Prof. Curt M. Breneman" <brenec@rpi.edu> writes:

>I also have a W32A that has this same issue. It's most likely a common
>attribute of this type of metal-backed radio.

The Yaesu FT-51 also has a metal back, but there's also a thermistor on
the VHF and UHF boards near the power amplifier. If the board gets
too hot, the CPU reduces transmit power. Interesting way of dealing
with the problem. In addition, there was a car-mounting adapter for
the radio that provided power and a fan to keep the frame cool!

>I've heard that other
>popular hand-held dual-banders do not have this problem, particularly if
>they have plastic cases.

Yeah, but where does the heat go then? The FT-50 is like this.
The VHF and UHF power modules are both mounted to this nice big metal
chassis the size of the whole radio, but it's entirely enclosed in
plastic when the battery is attached. For short periods of operation
at high power, the heat sink just absorbs the heat and spreads it
around inside the radio. But for long conversations, there's no
good path to the outside, and the temperature must just keep rising.

I have had one for about a month and like it. Once you get to know what functions are on what menus it is quite quick and easy to use. I did have one fault with it with the CTCSS tone being very audible, I sent it back to dealer who sent it to Icom and it was sorted out.
I use a G5RV with an AT180 and get quite good result from home. Although I have noticed the ATU turned itself off periodically for some reason while transmitting. After a bit of experimenting I found that if I lowered the output power slightly it cured it.

I have a laptop computer I would really like to trade for a good HF rig (Yaesu FT-757GX MKII , Icom IC 735 or 745, Kenwood TS-140 or 430 or similar radio)
The laptop is as follows:

Fujitsu Lifebook 770tx
Pentium 200MHz MMX
32MB RAM (expand to 96MB)
3.2GB HD
12.1 TFT display
56k flex modem (patch to v.90)
Hot swap bays for battery, floppy and CD Rom(20x speed)

This a great little computer. You can find out more about it here:
Fujitsu 770tx Specs Page
or http://www.fujitsu-pc.com/products/othern/700spr98_specs.html

I really want to trade it but I will sell it for $550.00 shipped. Email with replies please.

4038. Anyone Use SM230 w/ TS940S?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-28 00:00:00 UTC
From: Dick Flanagan <dick@libelle.com>
Message-ID: <81s4p2018c0@news1.newsguy.com>
Source record: 93148

I am looking for anyone who has connected a Kenwood SM-230 station monitor to a TS-940S. I am very fond of my SM-220, but I am told the SM-230 is a better monitor.

I am particularly interested in whether there were any interfacing/cabling problems and whether there were any limitations or "challanges" imposed by using a 940 instead of a 950.

I would particularly like to hear from anyone who has had a chance to compare the SM-220 and -230.

Thanks to any and all who can help.

73, Dick

From: kg4cna@hotmail.nospam.com
Message-ID: <3841bebd.86105304@news.alaweb.com>
Source record: 93160

Does anyone here have experience with the MFJ-4225MV switching
power supply ? I have one that is only a few months old. What I
want to know is: does the internal cooling fan cut on and off as
it needs cooling ? OR is it supposed to run continuously ? I have
just noticed my unit's fan going off shortly after turning the unit
on. When I key down, the fan still does not come back on.
I have not previously noticed the cooling fan cutting off until
a couple of days ago. I have emailed MFJ tech support...but
have not gotten a response yet.
Any help will be appreciated.

I have worked with some industrial heat transfer oil made by Dow Chemical called DowTherm. Not sure of the chemical / physical properties but I might be able to find out.

The particular version I had to put up with had the consistency of wax when it was cold, but it was very efficient once it got up to a very high >300F. Safer than using steam in that application. No pressure!

4057. Re: ADI dualand

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-28 00:00:00 UTC
From: Brian <none@worldnet.att.net>
Message-ID: <81sp0l$9vs$1@bgtnsc03.worldnet.att.net>
Source record: 93167

I have an AT-600 and would highly recommend it. Although it does not have all the features of the 'mainstream' HTs I have found that it is significantly better at intermod rejection than other comparable models (an important feature IMHO). It does receive both VHF and UHF bands simultaneously as well as provide crossband repeat functionality. It also has a very solid 'feel'. I've also found that it is compatible with some of the accessories for Standard brand HTs which makes it relatively easy to find low-cost spare batteries and the like. My only complaint is that the receive audio leaves a lot to be desired. However, nearly all the amateur HTs produced today have speakers that are too small to be of any practical value so this issue is not a specific fault of the ADI radio.

To put it simply - if you're looking for a reasonably-priced, better-than-average performing HT you'll be pleased with the AT-600.

Dave (or anyone else),
I need a gallon for my dummy load. If single gallons are not available, I'd be interested in buying a 5 gallon pail if that is available.
Ted N1XLW.

Source record: 93172

Hi.
Looking for information on this transistor. Could not come up with
anything via normal search engines. Have an amplifier (VHF) that
uses one of these devices. What is the rating at 150 Mhz? in/out, and gain @
14 volts?

My guess is 10 in for 60 out. Anyone know for sure?
thanks,
Joe K7JOE

First of all I beg your pardon if cross-posting is frowned upon.
Estate has a several hundred (NOS) tubes to sell as lot, + WW2 (or
prior?) era military radio, + other vintage electronic test
equipment, Radiola and 45 RPMs. Seattle (Tacoma) area.

Send email if interested (read signature @ bottom to reply). Evening
or Staurday viewing, by appointment.

The 8950 is a 12 volt version of the 6KD6, according to the RCA tube manual. It stated, Other than the filament rating, the internal structure is identical. I sold a lot of 6KD6's for conversions at hamfests, and had hams bugging me for more, for several years.

DavidC wrote:

4082. Re: Alinco DJ-V5 Flashing Frequency Display ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-28 00:00:00 UTC
From: Craig Fraser <cfraser@interlog.com>
Message-ID: <3840DCAB.68FECDF0@interlog.com>
Source record: 93305

Thanks. I have read and heard about "the mod". It appears to be unofficially sanctioned by Alinco. Apparently some sort of production mistake, and late production models shouldn't require it for the expanded receive, if I remember the conversation I had correctly. The person at Alinco agreed it's in everyones best interest if the user does it theirself. I've done it, and not 5 minutes from start to finish. A slickly made product. I don't recall exactly, but I think the frequency display flashed somewhere up in the 500 MHz range, for instance. The transmit frequency range of this unit is *very* broad, and I was wondering if the flashing had something to do with that. This small radio has a big lot of features that I'm just beginning to check out. Regards.

Hi All, the 7930/7950 were radios ahead of their time!! I have had a
few over the years and always found them reliable radios and well
built. never had a problem with any of them!!
Just my .02 cents

Mark, N2FLF

FOR SALE / TRADE:
Icom IC-730 HF Mobile radio. In excellent condition with original preamplified hand mike, original manuals, power cable and box. Works great with 100+ watts out on all bands. Has WARC bands. Also, an almost new Samlex SEC-1223 switching 23A power supply. This little lightweight supply is awesome, has forced air temperature activated cooling for reliable operation. It includes original manuals and box. Nice small HF station.
$400 + shipping

Or trade for Kenwood TS-830S in very good shape and working perfect. CW filter not needed.

Email: W4UDX@juno.com

See a picture of the Icom IC-730 at:

4092. Re: Is the FT-847 *really* good on HF ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-28 00:00:00 UTC
From: Steve <wswr@erols.com>
Message-ID: <81rf1n$9$1@autumn.news.rcn.net>
Source record: 93315

I was making the same decision as you and did my home work. I was undecided
between the 847
and the Icom 746. I ended up with the Icom 746
for the same reason as your looking for, HF

If you intend to do satellite work then go for the
847 but if you want a good HF receiver then go for the Icom 746. All the
hype on the FT-100 is fine but
that's a mobile radio not a base.

Good Luck in what you decide.

4095. FT-900 Problem -- Help?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-28 00:00:00 UTC
From: Dick's News <dickwd8ceb@worldnet.att.net>
Message-ID: <81rhdm$87f$1@bgtnsc01.worldnet.att.net>
Source record: 93318

I have an FT-900 which I purchased brand new about 3 years ago and it has worked
great up until recently. It appears that the PLL unlocks between 21.500 - 30.000, everything
else works great. Has anyone else experienced this problem and corrected it?
Your input(s) would be greatly appreciated.

Thanks & Happy Holidays

Dick - WD8CEB

4096. Re: Need a HT recommendation

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-28 00:00:00 UTC
From: Charles Robert Jordan <pjordan@uswest.net>
Message-ID: <RTb04.3271$2p2.176965@news.uswest.net>
Source record: 93319

I recently purchased a ICOM-ICT81A and it is a Quad band HT with
6meters,2 meters,440mhz and 1.2ghz so it basically covers all the activity
in your area.It does have a Ni-Mh battery pack for about 5 watts outof the
box and 1 watt on 1.2ghz,it has wide fm recieve as well as airband and a
total of 124 memory channels and programming software can be purchased.You
can add the callsigns of the repeaters for each memory as well as the the
radio stations and tv stations.This is a very packed HT that is small for
its features and I enjoy it very much.

4099. FS/Trade Heathkit SB-200 Linear amp

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-28 00:00:00 UTC
From: rpemers@aol.com
Message-ID: <19991128105455.08496.00001105@ng-cl1.aol.com>
Source record: 93322

I listed this amp once before and although there was a lot of interest, no one bought the amp. So, here it is again. I have an SB-200 amp in excellent condition with full output of 600-700 watts all bands except 10 meters. It does 350-450 watts on 10. Also tunes the WARC bands at reduced power. Has Harbach "Soft-Key" mod already installed, so the amp can be keyed with any solid state rig.

I would like have $340 for the amp and will split shipping cost. I will also consider a trade for an hf rig I can use as a mobile, since thats one of the reasons for the sale. Would prefer a Kenwood TS130, 180 or 140S in like condition.

If your interested, email to rpemers@aol.com and we can talk.

4100. NRD-545: TONE control bug??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-28 00:00:00 UTC
From: Ivan Milesi <milesi@bigfoot.com>
Message-ID: <81rjm8$gc4$1@ssauraab-i-1.production.compuserve.com>
Source record: 93323

I am really pleased with my new NRD-545. I have, however, witnessed a phenomenon lately which slightly spoils my listening satisfaction and for which I have not been able to find any explanation yet:

Sometimes, when I turn the TONE control of the NRD-545 fully clockwise and then, after a while, try to turn it back to center position, the sound is totally suppressed and the speaker gets mute. If this happens, sound is only audible with TONE control turned completely to the right. This strange phenomenon disappears only after the receiver is switched off and on again.

Is this a firmware bug? My NRD-545's serial number is RG 07010.

Greetings from Switzerland

Ivan

4101. FS: telegraph key

Source record: 93324

Telegraph key... arm pivots on ball-bearings... pot-metal base is
gold/brass-colored plated or anodized... "Japan" embossed on underside of
base... plating/anodizing is peeling and/or discolored in a few places...
some pitting on arm... key is not collectors quality but still looks and
works good. Would be a good "user" key... Don't forget "straight-key" night
coming up soon!
$20.00 shipped.
lml@mnsinc.com

4102. Re: Alinco DJ-V5 Flashing Frequency Display ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-28 00:00:00 UTC
From: advanspec@aol.comburger
Message-ID: <19991128112752.11679.00000969@ng-bk1.aol.com>
Source record: 93325

The flashing display means the PLL is "out of lock" & wont receive on that freq. On the DJ-V5 between 76 - 999 Mhz there are about 2 small ranges of freqs where this will happen, upper 500's or 600's is one , I think.

4103. Micor VHF repeater forsale!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-28 00:00:00 UTC
From: Robert Kubichek <bobn9lvu@lakefield.net>
Message-ID: <3841572B.4B0A56DE@lakefield.net>
Source record: 93326
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I have a Micor Base converted a repeater. It has new helical filters on
front end and completely gone over by local Motorola tech for the 2m
band. It comes with a 7k controller, with all options, including pl.
Also it comes with duplexers.
It is a 100w solid-state final, that was turned down to 50W for
continuous duty.

All come with service, and or user manuals.
The scom 7k comes with the windows programming software.

Model numbers are as follows;

Motorola Micor
893RCB-3145B-RH52

Telewave duplexers
TPRD1556

Scom 7k controller

Asking a fair price.

All ready to go on 2m.

Please, serious inquiries only, buyer pays shipping,
and insurance.

4104. Re: NEED HELP W/ RANGER 2950

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-28 00:00:00 UTC
From: caladan1@aol.com
Message-ID: <19991128115825.15453.00001117@ng-fw1.aol.com>
Source record: 93327

In the older model 2950 if you prgramed the scan for a certain area that was the only area you could transmit. To reprgram scan you need to do the following:
Turn the radio on. In manual mode push PRG then the SCAN button. Note the scan + or - on the display. Set the - to the lowest freq you want ie..26.0000 and then hit ENT hit the SCAN button again and set the scan+ as high as it will go ie 32.0000 and hit the ENT button. Its that easy. It will now RX/TX throughout the entire bandwidth.

USP grade mineral oil, available at drug stores, is what is
recommended. If it comes out of the vent hole on the top, it is much
easier to deal with than other kinds of oil.

I am told that Texaco sells an oil whose original purpose was for
jet turbines ... not sure how it is labeled in quart containers for auto
use but is supposedly awesome at handling heat. Would be curious
to know what you may learn ...

Source record: 93339

I posted a forsale for a Mirage 2 meter amp on here about 2 years ago. The price I put on it was
$200 US shipped. The only buyer was an Italian station. He had no problem having his bank wire the money to
my bank account. It cost me $32 CDN (ABout $21 US) to mail the box by surface. Airmail was nearly double.
The box took 10 weeks to arrive in Italy. I'm sure he thought I had ripped him off, as he called me a couple of
times (once at 3 am local). I had to fax him the insurance form before he calmed down. I'd have to think twice before
I'd sell outside of the US and Canada again.

4127. Re: ten tec scout stability

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-29 00:00:00 UTC
From: dm <dmandjos@olypen.com>
Message-ID: <giB04.82239$7I4.1961782@news5.giganews.com>
Source record: 93100

Hi Frank....I've talked to the boys back there about Scouts. I don't have one in my Ten-Tec stable, but was concerned about the signals I was copying. Accroding to a "high source" the Scout has a closed loop frequency control/stability system, and if the RF isn't on air long enough for the system to sample, the thing "goes looking"....THE WOBBLY DRIFT! And, so, if the RF is on air long enough for the system....as in SSB or SLOW cw, everybody is happy. If you are ragchewing on CW at "normal" speeds for that...the wobble. I'm a Ten-Tec lover/fanatic, but Lordy how I wish they would either discontinue that thing or something. They are only human, and have laid one or two "eggs"..... 73 "DM"

Hello Barry,

You'll be glad to hear that I finally managed to download the whole
document (whew! that was tough!).
It is intact and has 47 pages. 8,674KB.
The site is indeed difficult and breaks the connection often.
You might want to try a download utility that automatically takes up
where the previous d/l failed (e.g getright, etc.)
Tell me how you do.
Keep on trying...

Thanks and best regards,
T-man

4136. Re: Transformer oil for dummy load

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-29 00:00:00 UTC
From: Tom Bruhns <tomb@lsid.hp.com>
Message-ID: <3842FADF.45BC583C@lsid.hp.com>
Source record: 93109
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

A long time ago, I got a gallon of transformer oil for my Heath Cantenna... I visited a transformer rewind/repair shop (happened to live in Tucson at the time), and asked for it. They gave it to me; not worth writing up a bill.

I'd recommend trying the yellow pages of your phone book: find a place that deals with big transformers and ask them. Ask your local power utility (undoubtedly will have to get beyond the front desk receptionist to get any action on this request! But then there may well be hams that work for them, too...). As a last resort, check petroleum products distributors and ask specifically for transformer oils...they likely will have catalogs/data sheets. In that event, you might indeed have to settle for a 5-gallon can of it. Share with other hams in your area? I'd expect by this time that there won't be any PCB-laden oils left in service in the US in any transformer serviced in the past 20 years at least.

Cheers,
Tom

From: Ron Cook <roncook@att.net>
Message-ID: <cbv54sc03pfrgtpdq9tqm5l7ro1i1nagfm@4ax.com>
Source record: 93111

When I started with RS in September of 1967 the company was owned by
Tandy.

The following is quoted from < http://www.radioshack.com >

Tandy Corporation began as a family leather business in 1919 and grew
into a billion-dollar business under the leadership of sales pioneer
Charles Tandy. Intrigued with the potential for rapid growth in the
electronics industry, Tandy acquired the ailing nine-store,
Boston-based RadioShack chain in 1963. At the time, it was a small
mail order company catering to Ham radio operators and electronics
buffs. In Tandy's hands, RadioShack became an American icon.

End quote.

A rather interesting and informative book about marketing was written
by Lewis Kornfeld, former President of Radio Shack. The title is:
"To Catch a Mouse Make a Noise Like a Cheese".

Disclaimer: I do not work for, nor do I officially represent, Tandy
or RadioShack.

The Motorola SRF seires is a custom made device.
It is protected and as such cannot be purchased without the written permission of
the origional customer.
You can't even get specs on the device.

Hi Rob,
I have a pair of KLM satellite antennas with the circularity switchers which I would be willing to sell to you. The antennas are the KLM 2M-14C and the 435-18C.
I live in central NJ, and obviously it would be easier to have them picked up, but I suppose I could find a box which I could ship them in.
If you are interested I would sell them both for $200, plus a few dollars for shipping if needed.

When I bought a Heath Cantenna some years ago, the instructions that
came with it recommended a number of oils, one of which was ordinary
mineral oil from the drug store. Worked fine for me. (You might try a
"Sams" type of store, so you can get big bottles of the stuff;
otherwise it takes a lot of pint-size bottles to make a gallon.)

Hi folks,
Does anyone know where I should look on the internet for data on some of the more esoteric IC's used in 1970&80's Philips FM transceivers (IC's like OM518, TCA580, HSH549 4B, etc) ?
These seem to be custom chips and don't appear in any Philips Databooks that I can find.

Also, looking for data on SIGTEC CTSS chips (various).

Thanks,
Mark Harrison, VK3BYY

I have for sale
Motorola STX convertacom
Comes with Standard Mike,Amplified Speaker,Bracket,800mhz Antenna.
Price is $80 obo shipped
Motorola STX Rapid Charger
Charges batteries in 1hr
Price is $70 obo shipped

Everything is in good condition
If interested-w2irl@aol.com
Thanks
Pat W2IRL

4160. Re: IC 706 .. Antennas too close, 2 meter damage?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-29 00:00:00 UTC
From: Charles Zalenski <ka2mkq@epix.net>
Message-ID: <%Ck04.900$7n.77002@news1.epix.net>
Source record: 93185

Last time I looked at the ICOM Database on the 706 common troubles this problem was at the top of the list. It happened to me. My radio would have a high noise to signal ratio within line of sight to repeater. Turned out a switching diode pack in the 706 2meter antenna ckts gets fried when too much 6 meter rf goes into the uhf conn. when running hf. Not a lot of space on auto roofs to get these antennas apart. ICOM Should have installed 2 relays to short the unused antenna connector to ground and this would not have happened. I fixed my own radio. a little 4 pin diode pack gets fried. They cost under a buck each. Just need to be able to work with surface mount parts. Charlie KA2MKQ@epix.net

WebMonkey wrote in message <383DCAEF.123C@mad.scientist.com>...

Hands down, the Kenwood TH-G71A its a Dual-Band radio, but not Dual Recieve. You have 200 memory channels that you can program any frequency into, either vhf or uhf, you don't need to use a band button to use a certain band. Also the radio has alpha-numeric display a fair scan rate, exelent intermod rejection, its Mil Spec 810c shock/water resistant and is a very durable feeling radio, almost feels like some of the newer commercial radios, exelect receiver, one of the best or hotest receivers I've had in a radio. It is also modifiable to receive 800mHz (kenwood's ftp site has instructions)

I was going to originally get a Kenwood TH-79A because it is dual-receive dualband meaning the ability to monitor 2 freqs at the same time either (v+v v+u or u+u) but it didn't have a mod available for 800mhz receive which i wanted. So I went with the TH-G71A and I am very happy I did, its also cheaper at about 200 dollars less than the TH-79A.

One thing I learned about this radio after I got it is when using the CTCSS on certain repeaters the SQL tail isn't there. That familier CRACK at the end of a conversation when the signal drops. On this radio (and its the first amateur radio I've seen do this) the receive actually goes silent after the signal is lost. So it acts like a commercial radio too. That may not be important to you, or a lot of people, but I am very happy that Kenwood put a receive in this radio that acts like a commercial radio where when the signal drops out it doesn't have that SQL tail CRACK sound.

I give the Kenwood TH-G71A 5 stars ***** out of 5 stars.

BTW just to let you know here are the radios I own.. I'm not new to this so I've handled a lot..

Kenwood TH-26AT
Kenwood TH-28AT
Kenwood TM-211,221,231,241,251AT
Kenwood TM-V7A (hate its blue screen)
Yaesu VX-1R

And various Motorola Radios, Spectra, MTX8000, STX821, P100's etc etc etc.. I've also owned an ICOM IC-micro2AT and used several others. By far I love the TH-G71A the most.

That's a early C-band satelite dish rotor power
supply,maybe with a directional control switch which is a
polarity reversal switch.
Good for use as a 36 volt power supply at fairly low
current.

Source record: 93203

Ok,

Let me start by stating that I have NO interest in Cellular reception.

Does any one have info on getting the FT-90 to TX beyond the standard MARS/CAP mod for this unit?

Now, I know that like the my VX-5 and VX-1 (and tons of other radios), you can place solder blobs (or 0 ohm resistors in different pads of the 'personality group pads' to get DIFFERENT PERSONALITIES for the radio (e.g. Euro, Asian, Canadian, etc..).

WHAT I'M GETTING AT: Do any other personalities allow for TX beyond 130~180 and 410~480? Or better still, does anyone know of a FREEBAND mod for this unit?

Any pertinent info would be appreciated!

Thx,

-= Homer =-

Source record: 93205

I have been looking at these two nice little portables and was hoping someone could give their opinion as to which is better, the features are very similar except for the lack of alarm on the Yacht boy. I'm very interested in their performance in AM band and its ability to pick up stations far away; as well as the sound quality of the FM stereo synthesizer.
Please, if any one owns Either of these radios, Please give your Experiences and opinions.

Thanx and Regards!

4181. Re: ICOM AH-4 ANTENNA TUNER EXPERIENCES

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-29 00:00:00 UTC
From: "Scott A. Blystone" <k9eee@rochester.rr.com>
Message-ID: <KXr04.11364$wG3.715835@typhoon.nyroc.rr.com>
Source record: 93206

Well, this question can be approached from two directions:

1). How well does it interface with the radios?
2). How well does it perform?

My experiences:

I've owned an AH-4 for several months and use it regularly with an IC-756. I also recently purchased an IC-706 MKIIG. My installation is at the base, not the mobile. The tuner is mounted about 2 feet from the ground on the side of the house. A short, 20 inch #6 copper wire connects it to an 8' ground rod. The grounding is very important. My "antenna" goes up the side of the house about 12 feet, then over to a fence about 20' away. I have plans to string it up to a tree about 200' away some night when the condo police (hi!, hi!) are not around.

Now, as to the radios. The unit tunes everything from 80-6 meters flawlessly with both radios, and the tuning is FAST. I'm talking less than 1-2 seconds! I do have one minor problem with the 756, though. For some reason this does not happen with the 706. On 40 meters, when I hit the tune button, I initially get an SWR of near unity. After I transmit for a minute or two the SWR goes up to 2:1 and stays there. When I transmit again, the process repeats itself again. Since this happens on only one of the radios and on one of the bands and seems to cause only the loss of about 5W of output power, I don't sweat it.

Now, as to performance. I should think it would perform equally well as any other tuner with similiar whip or chunk of wire. I have lots of QSO's all over the U.S. as often as I want. I even work quite a bit of DX on 10-20 meters. In the last few months I've worked perhaps 75 countries with it, but that's without trying too hard. I'm more of a CW ragchewer than anything.

Let me know if you want further information. I can e-mail you provately with my phone # and we can talk if you like.

I've got a Radio Shack Pro-43 with the cellular mod performed, along with the standard "rubber duck" antenna and an AC adapter. In great condition, works fine (I've been using it here at home with the AC adapter for about a week now, but its being replaced with a Pro-2030).

Looking to trade for a basic base-station packet radio setup (complete with radio, TNC, & all necessary interconnect cables).

Will consider any offers.

I'm in Austin, Texas.

Hi Gang,

My T2X rotor stopped working after many years. After disassembling it, I found three problems: a broken tooth in the ring gear, a broken tooth in the thick pinion gear, and a broken 1/4 shaft (that presses into the bell casting).

My manual doesn't show enough detail to order specific parts. Two Questions: Are spare parts still available (the rotor was made in Dec. '87)? And does anyone have a detailed parts list and assembly drawing? I hope I kept track of all the little washers, but I'm not completely certain!

Thanks and 73,

Jim W8ZR.

Hi All,

I just got my Tech plus last week and I am ready to setup a shack. I have posted on the antenna newsgroup a few questions about antennas and I am now ready to ask you for your opinions on transceivers.

I intend to do primarily HF work. I will also play with VHF/UHF but I am focusing now on getting the HF station going. I am considering the following transceivers: IC-746, FT-847, FT-100, and IC-706MKIIG. I would appreciate your feedback on any of these units.

Thank you in advance!

Regards,

4197. 940 TX problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-29 00:00:00 UTC
From: lyons@canada.com
Message-ID: <384294e3.1645366@news.videotron.ca>
Source record: 93222

A frined of mine has an intermittant problem in his 940. Mostly it works fine but every so often the SSB output cuts out and is replaced by a seriously distored signal, actually more of a noise. He's carefully realigned the phase lock loop and checked for dry joints, all to no avail. He suspects the problem may be associated with the SSB lower slope control.

Any suggestions or help would be appreciated. I'll pass them along.

Did anybody campare these radios? Based on the ARRL reviews, each radio has its own merit:

Advantages of 706MK2G over FT-100
- single separation cable, no screw involved
- headphone jack
- better meters
- less power consumption

Advantages of FT-100 over 706MK2G
- PBT in DSP, can get by without CW filter
- less expensive
- TTP microphone included

Can anybody share some real-time experiences. Are fans in both equally noisy? Are controls similar? Is there any modification to attach headphones to the FT-100?

The radio would be used for traveling (with switching power supply) and in mobile operation.

By the way, does anybody know which switching power supplies are hash-free to an extent that they are not heard with indoor antennas?

Pre-Tandy Radio Shack?? In Atlanta GA?? When Tandy took over
Radio Shack it was 9 stores, and I thought all 9 were around the
Boston area. And that was in the 60's!

Source record: 93231

Missed some points:

Advantages of 706MK2G over FT-100
- better sensitivity
- better notch

Are SWR meters in both useful? From the QST reviews it seems that the
FT-100 meter has only a few levels. This could mean hard time in adjusting
for minimum SWR.

Charles,
I am glad that some one else see that the emperor has no clothing.

It is greate that you have the ability to repair the SMT diode pack,
and yes the correct design action by ICOM was to place a set of cut-out
relays... but I guess the cost was to just to much for ICOM.

BTW Watch how you place the radio at the home QTH, the base 6 Meter
antenna has to F-A-R away from the base 2 Meter antenna, just think of
all that GAIN... hi hi

I built a small control box that uses a REED Relay antenna switch that
I scrounged from a MOTOROLA MICOR it is driven from the antenna select
lines, when on any HF band and that includes 6 Meters the 2 meter input
is shorted, a bit "primitive" but it keeps the problem at bay.

The existence of this type of problem still make me wonder if
the "Design" team at ICOM is even cognizant of the operating
environment that exist in mobile operations... I guess that they just
do not operate/test in any mobile "Real World" operations.

I do not think that this a installation issue as some in this thread
have decided to make it out, I personally think that the majority of
amateurs that run HF mobile have a wide and quite expert knowledge on
how to "install" and operate their units, and I am sure that they are
not a bunch of dithering mobile "amateurs" as intimated.
Oh and yes the antenna placment space in a mobile is a bit tight/small
to say the least, and I drive a large SUV...., it make me wonder what
was used as the "officil" ICOM mobile test bed.

BTW I just Finished Building the December QST article that gives you a
keypad remote to the 706, best accessories for mobile and even home qth
operation that I have seen since the 706 hit the road.

Well they may have had 9 in Boston but there was one really large RS in downtown Atlanta about 1967 or so. I used to take the bus down there(only 13 at the time) and browse. Could be my mind is going and could be also that I am mistaken about it being pre Tandy but I really do remember going to that large outlet. Small barrels of various parts and lots of different equipment CB, Ham and test stuff.

If you'll think back carefully, Butch, I believe you'll recall that was a Lafayette store. Lafayette and Southeastern Radio were the only two radio parts stores downtown at that time (Ack Radio was where it still is, up on Deering Rd). The Tandy Leathercrafts store was across the street from Lafayette, and there was a wonderful Army-Navy surplus store in the next block which had a bunch of surplus radio gear as well as $19 Lugers and $20 Colts. I bought a couple of the radios, ART13, ARC5, but I should have bought a ton of the pistols at those prices. (Who knew GCA68 and drastic firearms price inflation was just around the corner?)

The 7850 is the version before the 7950. It also is a GREAT radio.
Like the way that looks also, with the yellow LED arrows, cool.
The 7950 looks completly different. it has an LCD display with pretty
nice emerald green lightnig. Nice looking radio. By the way, both
the 7850 and the 7950 are just about intermod proof. Not like todays
rigs that just have to receive DC to Light, well almost anyway. If I
can find a color pic of the 7950 I'll e-mail it to you.

4217. HT: IC-T8A or DJ-V5T?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-30 00:00:00 UTC
From: RZG <gevaryah@NOSPAMnetaxs.com>
Message-ID: <38435D85.BA7BB58B@NOSPAMnetaxs.com>
Source record: 92992
Cross-posted to: rec.radio.amateur.equipment,alt.ham-radio.vhf-uhf

Since I got my license last month, I've been comparing various HTs, and have basically narrowed the search to these two. I've summarized the online comments I've seen about each one, I can't say anything about their accuracy.

Icom IC-T8A: (approx. $270)
Pros: It has the 6m band, which sees some (I can't say how much) activity in my area. Includes AA battery case. Includes BP-200 battery, the most powerful available.
Cons: Battery clips have been known to break, but I think Icom has fixed this. Numerous complaints about poor battery life. Several complaints about TX burning out when hooked up to external power supply.

Alinco DJ-V5T: (approx. $240)
Pros: Has only positive comments from people. Full 70cm coverage.
Cons: No 6m. Several people noted that expanded receive is non-existent at certain frequencies, it only "blinks". No free AA battery case, $13 additional. Included EBP-45N battery doesn't allow operation at full power, EBP-46N would add $65! Some comments about the manual not giving enough details.

So what are your opinions on these two? I've been leaning toward the Icom, but the idea of the TX burning out scares me; I don't want to have to ship it back. :)

For either radio, what kind of power supply would I be looking to purchase for when I want to operate from home? Generic 12 volt regulated power supply like the ones sold at Radio Shack? I see the Icom dc cable for $12, I don't see the Alinco cable but I'm sure it exists.

GREAT HT, isn't it?

HRO has the CMU160 in stock. I know you want a GREY battery...but better alternatives are available for you. There are NiMH packs out there from several sources.

Instead of the CMP111, there are several other good speaker mikes available for the Standard.

And you might want to think of a The Pouch neoprene protective case as a good alternative.

Radio Shack (or Tandy) purchased Allied, not t'other way 'round.
Ostensibly, as they told us at the time, it was to increase RS'
product line; as the Allied / Kinght-Kit line was phased in and
quickly out of the stores those of us at the store level decided that
it was to eliminate competition.

The Kinight-line had some very good kits but many of Allied's products
were virtually identical to those carried by RS and Lafayette. No
surprise there; often we would receive shipments in RS cases with
Lafayette product inside. A short phone call to the Lafayette up the
street would let the stores swap their mis-delivered merchandise.

I have forsale the Ameritron ALS600 amp with power supply and 10/12 mod,
850.00.
Bought it less than a month ago from a ham in Georgia and can't use it here.

Diawa CN460 crosshair swr/power meter for 2meter and 440, 80.00.

MFJ 418 Morse Code tutor, 70.00.

TM261A Kenwood 2 meter rig, 150.00.

Pat

4235. Larsen mobile VHF and UHF antennas FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-30 00:00:00 UTC
From: Ken Simpson <W8EK@fdt.net>
Message-ID: <NWQ04.705$5Z3.59134@monger.newsread.com>
Source record: 93010

For Sale:

Larsen mobile antennas
All are new, never used.

NMO mag mount $ 25
LM mag mount $ 25
NMO base (mount only, for "thru the roof") $ 6
NMO-150, 5/8 wave 2 meter antenna $25
NMO-220, 5/8 wave 220 MHz antenna $20
NMO-27, 5/8 wave 27 MHz antenna, easily trimmed to 10 meters $20
LM-450, 5 db gain antenna for 450 MHz $22

Slightly used, but in great shape -- LM Mag mount $ 18

Note: NMO is the Motorola type base connection.

Prices do not include shipping from Florida.

Thanks.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

You know, the difference in cooling capacity is so close, that using
real PCB laced transformer oil and a safe alternative that you'd never
even notice the difference in a HAM environment.

This is starting to remind me of a power war. Sure, 4.2Watt is
better than 4.0Watt, but does it really matter in practice?

4242. MFJ wipes out interference ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-30 00:00:00 UTC
From: Pete Holden <peholden@home.com>
Message-ID: <KHT04.37$qB3.8635@news1.rdc2.tx.home.com>
Source record: 93017

Question about the MFJ - 1026... ($179.95)

This device, they say, eliminates unwanted signals by detecting the direction from which they come and then nulling them (or peaking if that's what you want). Sounds like an audio filter but they claim it works on the rf -- in much the same way a directional antenna would.

Does anybody have any experience with this thing? Sounds too good to be true but, heh, ain't technology wonderful?

Thanks, Pete KA0TZK

Interesting advice from Frank - there are some real bad cw ops out there, with no concept of the space between letters. Perhaps the tape or reader trick would keep you from joining their ranks.

From a separate answer in this thread:

Bob wrote:
>
> I don't recommend code tapes or computer programs either. Just listen to
> real hams communicating on the air. And yes, you will find that if you try
> to work up your speed a little at a time you will find yourself learning the

> once. It will be frustrating but hang in there and you'll get it in a
> couple of months at the most, depending on your level of effort, commitment,
> and of course talent for it.

I find this answer quite at odds with most of the other advice I've heard, and possibly at odds with my own experience. I used computer programs (not tapes - too easy to memorize) and went from 0 to 15 wpm in less than a month. Some time later I started again and 2 weeks more practice got me past the 20 wpm test.

On the other hand - here's where 'Bob' may be right - I never learned ear copying, and have hit a barrier at 20 wpm. Lemme tell ya, when you hear a typical cw pile-up, it's a lot faster than 20 wpm, and I get frustrated trying to understand the fast, abbreviated exchanges.

So - opinions, please - is it really possible to learn cw by *starting* to listen at high speed? would that have gotten me beyond my current block?

I use it for suppression of line noise. When my quad and a dipole get
similar amount of noise from one direction, I can supress the noise by
10-30 db after a few seconds to a minute of adjustments. It does not work
with multiple noise sources, or when one antennas hears the noise very
well but the other does not.

I've had my 790 for about 4 years, with no problems at all. As far as receiving goes, it will easily outperform my FT-8500 and IC 820H. I suspect you may need to have yours serviced, probably something minor - maybe even an alignment problem.

Gee, when I mentioned that you probably won't find any PCB laced transformer oil nowdays, it was simply a comment for the safety-minded. It didn't even occur to me that there would be any _significant_ difference in heat capacity or heat transfer characteristics between the 30-year-old stuff and the modern transformer oil. So...if it was the start of a "war," I promise that it was done with no malice. :-) (I'd personally just as soon simply keep PCBs out of my life so I'd avoid the old stuff, but transformer oil was easy enough to get that it just didn't seem worth messing with 10 bottles of mineral oil from the drugstore [and the strange looks from clerks] or some unproven motor oil.)

Cheers,
Tom

To save the setting permanently, you have to resave that particular
memory channel. If you just set the tone as you are doing, the radio
will revert to the tone (or lack of same) stored in the channel memory
when you return to that channel later.

4259. Yaesu FT2400H, 1750 tone

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-30 00:00:00 UTC
From: Joel Dorfan <bdorfan@FRED.icon.co.za>
Message-ID: <38443540$0$238@hades.is.co.za>
Source record: 93034

I see from some mod sites that some jumpers can be changed to enable the 1750 tone. I have inspected the jumpers and found the first 3 open and then next 3 closed. The mod suggests that if 6 is closed then the button on the mike should give 1750, mine does not (switches between dial and memory) suggesting that 6, 5 and 4 are open and 1, 2 and 3 are closed.

My frequency range is 100 to 179 on the display, I think only 140 to 174 really works although some mods say that if jumper 1 and 3 are closed with 2 open the rx should be 118 to 174 and tx from 140 to 174.

I cant quite work out what is going on with these jumpers.
What are these jumpers set to in an un-modified radio?
Can anyone help?
My 2400H is the B model with the MH-26G8J mic.

Thanks

Joel

Have a query for anyone who has experience of the Kenwood TS930S

Fault: Display and all else dead except for meter illumination (dimmers switch dims the meter light)
The meter displays as follows:
Comp, Power and VC all read about 1/4 scale
ALC reads just above ALC markings
SWR reads 1.6:1
IC reads 3.2A

There is a healthy clunk from a relay located somewhere around the PA section when turning the power
on and off

28 volt supply is present at the internal PSU and the PSU and rear chassis fuses are ok

Any thoughts please

Hello,
I believe on that radio, if you take the top cover off, where the
speaker hole is, should be a "green wire" like a loop?, if you cut it,
it will give you expanded tx capacity, to find out more, go to QRZ
site, under "mods", look for your model. Hope this helps, 73, Charlie
N1FNR.....

In 1967, when I started with RS, I was paid $1.35 an hour plus 1%
commission on everything I sold. The store's Assistant Manager was
paid the princely amount of $1.90 an hour, plus 1% commission, *plus*
he was required to work 54 hours per week.

RS still pays around minimum wage; higher in states which have a rate
above the Federal minimum, of course.

Their pay-level classifications and commission structures have changed
many times through the past thirty years - so many times that I'm not
certain even the long-time managers I know could remember them all.

Maybe more later... :)

Hello All:

I am preparing to "upgrade" the station here and some items are on the "chop" list.

ALINCO DX-70TH, HF/6M, Transceiver, near new condition. Comes with EDS-4 (remote cable kit) and EMS-14 desktop microphone. Radio does have the MARS/CAP modification due to MARS affiliation. Also have the MFJ-1272BYH TNC adapter for it. $650.00.

ICOM IC-2710H, Dual band transceiver, near new condition. Comes with the UT-104 CTCSS tone decoder module. Radio had the MARS/CAP modification due to MARS affiliation. Also have the MFJ-1272MYV TNC adapter for it. $350.00.

DENTRON DTR-1200L, HF amplifier, very good condition. Amplifier covers 80, 40, 20 , 15, and 10 meters. Unit has two very new Sevetlana 572B tubes (one year old, little use). Full output on all bands (~700W). $400.00.

JPS ANC-4, Antenna Noise Canceller, near new condition. $150.00.

KENWOOD AT-230, Antenna Tuner. Covers 160 - 10 Meters @ 200W. Very good condition. $175.00.

If you are interested in any or all items, please, e-mail me directly: n3yyp@arrl.net

I would like to move the items fast as the "new" stuff cost money (don't they all).

Cheers,

Cliff Owen

Thanks so much Bill , that was it....its my first TR7 and I have no
manual so Im flying in the dark, but all is well...It works and its
loaded...with the new case I got from you, I
believe Im gonna like this thing....Thanks again...your service \sales
and all has been excellent...Quite a rarity ...hope you guys can keep it
up....Everything I have bought has been
resonable, and timely in delivery....I just wish youd make a current HF
rig, but I understand the limited market....I wouldnt!! hi hi....73

I have a FT101ZD that I can not get more than 60 w. pep out on any band or signal type. I just bought it this past summer. I thought the tubes were weak so I ordered a brand new set of 6146W (matched pair) and a 12BY7A tube from RF parts in CA. After installing them I have made no forward progress. I am still getting 60 watts at the max out. I have tried tuning the final output stage until I am blue in the face. I am making an assumption but I would think I should be able to get 100w at least.
Any help or suggestions would be great.
Thanks,
Mark

Folks,

I worked at several Radio Shack stores during the mid-to-late 70's as a part-timer and then as a Computer Marketing Rep when the TRS-80 phenomenon started taking off. The stores were in the Santa Monica/West LA/Beverly Hills regions, and I remember that the pay was pretty good. In addition to the stereo/CB/clock radio sales, I enjoyed helping people pick out the appropriate small parts for building little electronic projects. After while, a number of them would come by for advice about their designs. About the compensation issue: At least one of the store managers that I knew was making easily over 100k/yr with bonus, and as a 20-25 hr/wk part-timer I routinely made around $25-30k/yr during the later years of my association with R/S. Not too bad for 1978/79... It

was certainly a better job to have during college than working in the fast-food business! The experience was very positive and helped prepare me for graduate school later on.

I took me a lot of research before I bought my DJ-V5. I work for a television news operation and was looking for not only my first ham rig, but a unit that would replace the scaner in my car as well. After much stress over the purchase I finally went with the Alinco. Here is what I got for 239 dollars (including free shipping): A 5 watt, 2 meter HT, a 4.5 watt 70cm HT, a handheld company radio that operates on our news frequency of 450.050 receive, a vhf scanner, a uhf scanner, both with alphanumeric tags such as MCSO (standing for Marion County Sheriffs office) instead of 154.815, a wideband fm receiver to listen to my station on channel 20 (511.750) , an fm broadcast radio receiver, and a weather radio! When the unit is mounted in my car, as it is most of the time, I use car dc power and get 6 watts out of it. The expandable receive is what sold me on this unit. The modification is so simple and takes about 2 minutes! Oh yeah, as far as the scanner goes, you can program is 200 channels with the alpha tags. For the price, I do not think this radio can be beat.....but, that is just my biased opinion. Jon KG4DIR

Hello and Greetings:
I have a Heath Kit HW 18 Crystal Controlled Transciever. I would like to know what the Frequency range for this unit is? Is there anyone out there will to sale me a HeathKit assembly manual or a copy of the manual. All that I have is the Mic , Power Supply, and the Radio itself.
This unit was originally designed for M.A.R.S. and C.A.P. use...is there anyway to convert it for amatuer use?

Thanks in Advance.....

Have you considered the calibration of the watt meter? How about the power supply bias? Just a couple thoughts.

The ICOM 706, Yaesu FT100, Kenwood FT50 and Alinco DX70 are all reasonable radios. They are all small, and most of them have detachable heads. You do get what you pay for to some extent, which means that the ICOM and Yaesu are probably better than the Kenwood or the Alinco. I have the original IC706, and I like it very much, but it replaced a very old radio, and I have not done side-by-side comparisons with the other modern radios. If you want to save money, look for a used version of any of the above, probably would cost $900 to $600 used. The FT100 is probably too new to look for a used one.

Installation is the key to success, check out my article below.

Richard
KA0DXM

For those who are interested in information on HF mobile noise suppression, I suggest that you check my web site below. This article was first published in the Mobile Amateur Radio Awards Club newsletter. I also have information on my nine-band three-antenna HF mobile installaion.

4294. VX-5R tone setting won't stick

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-30 00:00:00 UTC
From: jscarfone@my-deja.com
Message-ID: <81vd6j$ii1$1@nnrp1.deja.com>
Source record: 93128

I'm probably missing something. Please clue me in. My Yaesu VX-5R won't hold it's setting for tone in a memory channel. I can set the squelch to tone and choose a frequency (say 100 Hz). I see the "T" at the bottom of the display. I press either PTT or "2" to save and all is fine until I leave the channel. Then the "T" is gone and my tone setting is gone.

Hello,

I am looking for two items;

I am looking for a Yaesu XF-110S 2.6-kHz "SSB" Crystal Filter

I am looking for a Yaesu MD-100a8x Desk Mic...

Both for use with a Yaesu FT-900/AT

I have an ICOM PS-55 matching power supply and an ICOM SP3 for trade...

Thank you and 73!

Reading this thread with interest and a bit of disdain at what Radio Shack has become. I fondly remember, as a budding young ham-to-be, going into the Commonwealth Ave store (maybe there was more than one?) in Boston on a summer trip and realizing that THIS was where the tinkerer's definately came! I remember them selling used components and chassis as well (of course!). I'm kind of fuzzy though....what was the connection with Allied....Allied Radio Shack? I thought that Allied was an industrial electronics company which I imagined being something bigger than a mere 9 store chain....anyone fill me in? As to where they've come today....well....they definately know how to make money so corporate wise I guess people say that is a good thing....they also are the only game in this area it seems (sigh) and even their very limited components at ridiculous prices find their spot on everyones shelves and in their projects....better than nothing....I guess. Now if they'd ONLY somehow find knowledgable people to work there with a little humility....< I shudder every time one of 'em approaches me at the "parts" racks >

73 - Keep on Tinkering......THAT.....is REAL HAM RADIO

hi all, i have a 3 yr old ft-50 with lots of miles. just yesterday while fighting crowds at the local mall i noticed that the ptt rubber cover had broken off. it was swaying in the holiday breeze.

i checked the ft-50 web page and hear that it is one continuous rubber piece covering all 3 buttons.

so, what have people experienced with this and what have they done to fix it? will yaesu just give one to you to replace it or does it require major surgery?

thanks in advance,

n0xlw
dave

Hi Dave ,
The very same thing happened to my FT50R . The other thing was the power button gets weak after awhile , I couldn't turn it off less removing the battery . No , Yaesu will not give you a new one , they'll sell you one though . My suggestion is to call Yaesu 562-404-2700 and order all the rubber protector covers and power button and replace them while you have it apart .

It's fairly simple to disassemble the radio , remove antenna , pull off the knobs , remove battery , loosen the screws on the backside of the keypad and push on the screws until the keypad pops out the front , then remove the screws . Carefully lift the internal circuitry out of the case and sliding it downward (toward the bottom) while lifting up .

Pay attention to the operation . Do not damage or twist the rubber seals around the keypad etc.

The parts weren't too expensive .

Good luck , 73 .

For Sale: Motorola Saber I Secure - VHF w/Accessories

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=207518634

Model #- H99QX052A
Factory ID - H43YXN7139CN

12 channels
6 watt output
146-174Mhz
SECURENET-S capable
CTCSS/DCS/PL/MDC600/MDC1200 capable
Radio comes programmed to your specs

Radio Comes With:
VERY Good High-Capacity Battery (W&W Brand I believe)
Antenna
Remote Speaker/Mic - Model NTN6128C
Belt Clip
D-Ring Clip w/Belt Swivel Attachment

This unit is in excellent shape (but has some small surface scratches on front). It is guaranteed to be in 100% working condition. All included accessories (except battery) are genuine Motorola parts and all are in perfect condition. Selling because it is not needed anymore. Reserve price is VERY reasonable. Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=207518634

I *still* can't figure any logical reason to bash RS - they STILL sell individual components yes, at reasonable prices - that are unavailable anywhere else for MANY in lots of places in our country - as for "electronics" or technical knowhow, as others have said, can't find very many electronics engineering majors willing to work for minimum wage... AND, it's not at ALL uncommon to walk into a radio store like AES, and quickly exhaust all available knowledge by the *HAM* salesman trying to help you! And we're not talking a 50 cent PART, but a $2000 *transceiver*!

RS isn't any more perfect than the rest of us, but they've saved MY butt and several valuable pieces of equipment that would have been difficult to repair without their available merchandise.

'As new' 6 gang Visar charger, model NTN7621C for sale.
Immaculate except for some scratches on the bottom plate. Works perfectly. I believe the new price is in the $750 range. $300 including UPS shipping within the US. Would also consider working out a trade for a BP/BR base station duplexer at 460MHz.

4310. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <822ism$4dj$1@news.hawaii.edu>
Source record: 92894
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

*rec.radio.broadcasting (devoted to the broadcast industry; moderated)*
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6O
(rec.radio.amateur working-group)

*It's been sadly reported that the moderator was lost to us in an
automobile accident; the future of this newsgroup is not known. 73 Bill...

Not having owned the icom I have no comment on it. Onto the Alinco - yep mine has the same annoying blinking, non reception. However it only happens from about 520-600megs which is only used for TV transmission so is of no great loss to me. WRT the higher power battery pack do what I did - get it as your second battery - always pays to have at least one spare in case! I have not yet had to refer to the instruction manual (7 weeks ownership) so couldn't comment about it.

I took my R5000 out of the closet and dusted it off. I hooked it up with a Panasonic unpolarized power cord as I was missing the original one. The AM mode worked for 15 minutes then started breaking up more and more until no audio at all. In AM mode the squelch and rf gain still affect if BUSY light comes on or off. When it started breaking up it seemed to do it more when turning the rf gain or audio gain pots but if its a bad pot then why does FM work fine still? Any help finding the problem would be appreciated.

thanks, george

I believe there is also a meter adjustment that adjusts the relative power reading. I helped an old ham who had a concern that his newer Yaesu had low power out. He had somehow turned the meter adj. on the back of the rig. I have the ZD mark III as my HF rig and all indications show 100 watts plus. I do not have a calibrated power meter but my antenna tuners both show relative readings over 100 watts. Sounds very much like the meter is lying to you.

Yaesu FT290 Mk1 for sale. Original condition - no mods except for a new mic lead. Telescopic aerial and carry strap included, can fit set of Nicads if needed. Copy of manual as well.

Cosmetically - few scratches on case, one part of a LCD digit missing but overall a good example of this set.

Price - inc postage - 125 UK pounds.

(Can add 25 watt linear for more cash)

Enquiries via email please.

Hi, I am looking for the following.
1) CMU161 Memory Unit.
2) CNB151GY 7.2v 700mAh battery
3) CMP111 Speaker Mike
4) CLC555GN Soft Case
Please e-mail any info/cost etc.
Thank you!

4318. Icom 756 vs Kenwood TS-870

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-01 00:00:00 UTC
From: W2BLC <w2blc@my-deja.com>
Message-ID: <823ohe$n3l$1@nnrp1.deja.com>
Source record: 92902

Would anyone care to comment on these two rigs. One has a graphical display and requires additional filters and the other has no display and needs no filters. Other than those facts, I would like to hear from hams that have used both and hear their comments about which is better, worse, or whatever.

Also, can anyone tell me if the NB on the 756 is adjustable - or just on/off?

Thanks, Bill W2BLC

4323. Ameritron AL-811A Help

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-01 00:00:00 UTC
From: ac6v <ac6v@ix.netcom.com>
Message-ID: <384531F9.7558B07E@ix.netcom.com>
Source record: 92907

I have the AL-811A amplifier driven by a Kenwood TS-850SAT. The
Ameritron uses tuned input circuits, however the same LC network is used
for 10M and 12M, likewise 20/30M and 15/17M. On the back of the AL-811A
provision is made to adjust the input circuits for a match between the
exiciter and the amplifier. If I adjust it for 10M just to the point
where the TS-850SAT will autotune for VSWR -- then 12M is off and the
TS-850SAT won't autotune. Adjusting for 12M -- then 10M won't autotune.
Result -- reduced exicter power as the TS-850SAT throttles back.
Ameritron sez nothing about the input circuit adjutments in their
manual!! Wonder if its adjusted for half way between these bands??

Any help, thanks

Source record: 92908

Ceramic capacitors do not have polarity.... however, if the ones you are replacing do have a polarity marking, they may not be ceramic. What is the marked value on the original units? I think 1.0 ufd is the largest common ceramic around.

>
> 73 jerry w8gnd

Well, if that's what the guy was worth!!

Back in 1978 I made about $20K, mixed as a salesman then as a
store manager. I made more as a saleman and worked less hours,
and had infinitely less grief.

If your friend made shit, maybe that's what he was worth.

Yeah, Radio Shack paid a minimum wage, or close to it. And it
was a 'minimum'. It wasn't hourly PLUS commission, it was hourly
as a minimum OR commission. But if you couldn't make 10 times
the hourly wage durring 'hot' hours, you didn't belong in the business.

It was balanced by the not so hot times. I wouldn't take a dinner
break, cause that was a hot time. I'd make sure I took a break before
then or just worked through to closing. And I had LOTs of return
customers. Customers who would ask for me. Big ticket, little
ticket, didn't matter, I knew I'd make the money eventually.

Even customers I pissed off made me money. One guy called when
I was new at the store complaining that the scanner he bought a week
ago went on sale. So I laid the phone down on a glass counter top
and covered the mic, then yelled back in an empty store to the
manager about this irate customer and what to do. (Give him a credit
for the difference.) When I picked the phone back up, the guy wanted
my name and said "I wasn't irate before, but I am now!" When he
came in the store I gave him the credit, and guess what? He didn't
walk out with it. He used it on a new $400 three head cassette deck!
He was pissed, but I managed to tell him that test on the deck showed
that the -20db curve and the -3db curve didn't intersect inside the
audio passband. He was an audiophile and he went nuts with that.
(Only one other deck under $1000 did that!) Well, after that, he would
come back, ask for me, bitch at me a little bit, even in front of other
customers, but always walk out with something! Usually big ticket
items.

When I ran my store, I RAN it, not clerked it. I made sure I always had enough resistors and caps and stuff on my wall to build every kit we sold. In my slack time, I built kits and put them on display. I always made sure anything that was moving I had backup in
the back room. I had days of only 3 customers. I even had NEGATIVE days. But more often than not, in a town of only 3000 people, I was number 2 or 3 in my district, beating all but one major mall store.

So I'll say it again, if your friend made shit at Radio Shack, it was probably what he was worth.

But the real problem is, that's all too applicable to too many of the visible employees, with ANY company, not just Radio Shack.

Mike

4326. For Trade: RS Pro 2006

RS Pro 2006 for trade. This is a 9 out 10 radio. It has the manual and ant. with it. It has been modified for increased receive. It covers from 25.0MHz to 1.3GHz. This is probably the best scanner for under 800 bucks. Would like to trade for an HF rig. I am posting this for my news group impaired friend N5PXH. Please reply via email to myself (and I will forward to him) or to George at spydor@hotmail.com . Would also consider cash offer but would really like a transceiver.

Just a shot in the dark on my part, but I'm fairly certain RS isn't making the big bucks on any of us hams who walk in looking for a 5 volt voltage regulator. Now, ask that same sales person to spew knowledge about their cell phone deals or computers and I think you'll find they know a little more....GET IT!!!! As long as they keep selling cell phones and computers, we can still by the occasional SPST toggle switch without waiting for the next ham fest. Frankly, I know exactly where the voltage regulators are in my local store and don't have to toy with the sales people to find one. I do however have the occassional pointless conversation with the store manager over why RG8/U coax is .72 cents a foot....lol

Lets face it folks...without RS we'd all be mail ordering PL 259's!!! What a thought!!!

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I have a Micor Base converted a repeater. It has new helical filters on front end and completely gone over by local Motorola tech for the 2m band.
It comes with a 7k controller, with all options, including pl, and auto patch.
Also it comes with duplexers by Telewave.

All ready to go on 2m, the freq. split is 146.700/146.100 , which is the old rtty repeater split.

The Micor comes with the service manual.
The scom 7k comes with the user manual, and windows programming software.

Model numbers are as follows;
Motorola Micor) 893RCB-3145B-RH52
Telewave duplexers) TPRD1556
Scom 7k controller

I am asking a fair price.

Please, serious inquiries only, buyer pays shipping, and insurance.

news:821pva$d0l$1@news1.Radix.Net...
| Hello All:
|
| I am preparing to "upgrade" the station here and some items are on the
| "chop" list.
|
|
| ALINCO DX-70TH, HF/6M, Transceiver, near new condition. Comes with EDS-4
| (remote cable kit) and EMS-14 desktop microphone. Radio does have the
| MARS/CAP modification due to MARS affiliation. Also have the MFJ-1272BYH
| TNC adapter for it. $650.00.
|
| ICOM IC-2710H, Dual band transceiver, near new condition. Comes with the
| UT-104 CTCSS tone decoder module. Radio had the MARS/CAP modification due
| to MARS affiliation. Also have the MFJ-1272MYV TNC adapter for it.
| $350.00.
|
| DENTRON DTR-1200L, HF amplifier, very good condition. Amplifier covers
80,
| 40, 20 , 15, and 10 meters. Unit has two very new Sevetlana 572B tubes
(one
| year old, little use). Full output on all bands (~700W). $400.00.
|
| JPS ANC-4, Antenna Noise Canceller, near new condition. $150.00.
|
| KENWOOD AT-230, Antenna Tuner. Covers 160 - 10 Meters @ 200W. Very good
| condition. $175.00.
|

| If you are interested in any or all items, please, e-mail me directly:
| n3yyp@arrl.net
|
|
| I would like to move the items fast as the "new" stuff cost money (don't
| they all).
|

>73 - Bob, KI8AB

Howdy Bob,

I think that this is an individual thing. Some people, like
musicians, have a better "ear" and don't have too much trouble sorting
out similar character like s and h and like d and b. When I was in

signal corps radio school in '44 we learned code listenin to fast groups, I think maybe 25 wpm and I had a devil of a time at first. I think if we had started with 15 or 18 wpm characters I could have learned the rhythm of the characters more readily. There were others who had little trouble.

I'd think that someone starting from scratch should use a program like SuperMorse and set the character speed to the fastest that they could read, maybe as slow as 15 wpm and then increase the character speed as they become more familiar. I'm one of those who think that computer progarms are great. Tapes are good too, if one has enough of them to minimize the tendency to memorize them. Another thing that will increase speed is to work other ops live. We did a lot of that in the signal corps, beginning with a bunch of micro-qrp rigs in the same room. We not only improved in code but in handling the radios too as we had to go through the load and dip cycles needed in the tube rigs. Later on we took to the woods with real rigs on "on the job training" which was fun... sort of like camping out. I was in Camp Crowder, Mo, of which I have pretty good memories.... not like the memories I had of infantry basic in Camp Fannin, TX, hi.

4337. FS: Ten-Tec Corsair TWO, with Ext. VFO

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-01 00:00:00 UTC
From: dm <dmandjos@olypen.com>
Message-ID: <Q8c14.1524$ul1.104240@news2.giganews.com>
Source record: 92921

Both equipments purchased directly from Ten-Tec, both in original packing,
with manuals.
I will pay shipping to Continental U.S.

Corsair Two, factory mint. Includes modification for QSK operation of
Power Amp, as per Ten-Tec instruction. This mod does NOT IN ANY WAY effect
"barefoot", or Power Amp by "relay control" , operation. $750.

Model 263, matching External VFO. Permits "split" operation, somewhat
unusual by allowing transmit on one frequency while allowing receive on
either or BOTH splits. $150.

Sell together or Corsair Two alone. 73 N 7 D M

>Any help or suggestions would be great.
Mark,
From memory, the FT101 has a series of trimmer capacitors for each band
and also a couple of slugged coils for each band on the tx side. These
are accessible on the underside of the rig. The slugged coils have a
considerable effect upon the drive level to the finals and are worth
adjusting, particularly if the set hasn't been aligned for some time.
AFAICR, they are under a metal screen with access holes for a trimming
tool. Each hole is marked with the band.
The trimmer caps adjust i/p and o/p tuning for the driver, a 12BY7A.
This is from memory some 25 years ago, check the manual, it shows all
this info.

gl Trev G3ZYY ...-.-

PS, The above applies to the FT101B, I believe the 101ZD is similar.

Hello, George!

Look for a waffled cap between the AM detector and the audio chain. When you find it, be sure to test the transistor that the cap is feeding, since it may have passed enough to the base to toast the transistor. The reason that you still have FM is the fact that the FM detector is separate!

Should be an easy fix! Good luck!

Source record: 92924

Hello, All!

I know that it's an off chance, but does anyone have the matrix board for an icom 22-S laying around?

I just picked one of teses critters up, and the matrix that's in there now is in pretty ratty shape...It works fine, but I'm afraid re-programming would lift a lot of the traces!

Thanks!

Bill Gallagher WA3RA (ex KS3Y)

>How low is it? I think 26 watts is normal.

The P.O. meter setting barely moves; I can hear my SSB signal in a nearby receiver. Just no power on on 10-15M like there is on the rest of the bands.

i know this, much less anywhere else except north america.
my biggest gripe is that how hard can it be to 'plunk' that
into the radio instead of 1.2gHz.
my area has 2 220mHz machines and no 1.2gHz.

i'm sure the uk feels the same way about 4 meters/metres =]

Also suggest you check with the manual on ALC settings and bias. Could be that the ALC is just throttling everything back. Is it the same on all bands i.e 60Watts on 10 thru 75? Often a clue there. I would not expect much more than 60 - 70 w on 10, so it looks like it may be bias / ALC or screen voltage. As other respondants state, also check your wattmeter or other measuring device. .

Why would it go out of alignment with modern stable components?

How many Hams twiddle their factory built sets regularly?

> AFAICR, they are under a metal screen with access holes for a trimming
> tool. Each hole is marked with the band.
> The trimmer caps adjust i/p and o/p tuning for the driver, a 12BY7A.

Any particular order or can you twiddle at random?

Gary7SLL, makes you wonder why the manufacturers spend all that money on
test gear when you can just twiddle for maximum smoke.

I really, really wish Drake would come up with a new HF
rig - or at least a matching companion transmitter for
their R8 receiver! The R8 seems to be very good rcvr
for pure ham use, plus or minus some filters.

You know it'd be clean design, easy to use, and not
a lot of "chrome" or "electric toothbrush" kinda
functions...

There is an adjustment for the drive to the finals. Hopefully you have the manual and can look up the adjustment procedure. Insufficient drive is the only thing that will cause the radio to perform as you have described assuming you are using accurate metering equipment. You MUST neutralize the finals and then adjust the drive to obtain the proper output power. Do not overdrive the finals or you will materially reduce their life. You should be able to get 100+ watts out of the 101ZD on any band when coupled to a reasonable antenna system.

Actually, some used to be marked with a black stripe at the preferred end
to be connected to ground. I wouldn't worry about it, but some audiophiles
do.

Alinco should mention the gap in the 5-600 range, to be straight, even though there's not a lot you're really missing. Apparently, the blinking display means the PLL isn't locking, so no receive. I haven't yet actually verified this with my scanner.

> No free AA battery case, $13
> > additional.

It's supposed to come with the T version, according to the manual. I bought it separately. Worth having as a backup.

> Included EBP-45N battery doesn't allow operation at full
> > power, EBP-46N would add $65!

The TH version (same price) comes with the EBP-46N pack and no AA holder. I think this is a better deal, as you can still get your 6V with alkaline AA's if you have to, but can't get 9.6V with another 'internal' pack. I wish they could have made the AA pack hold 5 or 6 cells so you could use rechargeables in it.

> Some comments about the manual not giving
> > enough details.

IMO the manual is OK except for the scanner and programming stuff. Easy enough to do though once you play around a bit.

>
> >

> >

The manual mentions 3 DC cables, IIRC, for car use. 12V @ 2A regulated should be plenty adequate. Many available, and easy to make too.

The HW-18 will tune up on the 75 meter ham band and its possible to connect a VFO into one of the crystal sockets. You will be able to get about 50 kHz worth of spread before you have to go inside and re-tweak things (for best output, etc.) The HW-18 was designed to work, nominally, from 4-5 MHz, as I recall. The HW-18 was a spin-off from a Heath model that had a VFO and covered the entire 80/75 meter band. I think they (Heath) may have had one for 40 meters, too.

Hi All,

I am a new ham (Tech Plus) and I am in the market for an HF radio. I almost decided to purchase an IC-746 but a friend told me the older (now discontinued) ICOM HF transceivers are just as good as the new ones and a much better deal for a beginner like me.

Do you agree with him? Do you have any feedback about any of the radios I mentioned in the subject line?

Thanks in advance!

Source record: 92957

> Would anyone care to comment on these two rigs.
I have both and the 756 is my favorite.

870 Better than 756
Receive filtering. The worst is for AM broadcast. On the 756 you have two choices, 9 kHz or 2.8 kHz. Also, unless you install optional narrow filters, you're limited to 2.4 kHz for CW and RTTY, way too wide. The 870 has a plethora of choices - one drawback is that certain filters are only available in certain modes - for example, you can't select a 50 Hz filter (only available in CW) for use with PSK31 when using SSB.

Computer control on the 756 is very limited - On the 870 you can do ALMOST everything (one oversight in the command language prevents you from reading the menu settings), including turning the radio on and off. You could mount the radio out of reach anc completely control it via the computer - not so with the 756.

The 870 has an optional digital voice keyer. It's nice to just push a button to send your call into the pileup. You'll have to use an external unit with the 756. However, the DVK on the 870 has one flaw in my opinion - you can't set it to key the radio, you either have to use VOX or manually work the PTT while the DVK is playing.

The keyer in the 870 is much more powerful. The keyer in the 756 has only one keying mode. The speed is set by a knob (a small one at that). The 870's keyer speed can be set by knob (a full size one), but can also be set to an exact WPM speed by sending a command (via the paddles). The 870 keyer can emulate different keyers as far as dot / dash completion goes. The 870 keyer has a TUNE mode (holds the key down, until a paddle is touched - useful for tuning antennas).

The 756 mic input requires a pre-amplifiier if you want to use a non-Icom mic, such as a Heil. Even with Heil's pre-amp, I need to run my 756 with max mic gain, and I could actually use a little more.

Even though the 756 has a aux input jack, I've been told (by Icom) that the impedance is low enough that if you use an amp you may get RF coming back into the radio through that connection and to use the Mic input for digital. FWIW, I don't use an amp so I'm feeding through the aux input.

Also as far as the aux input goes, the 870 has a separate ground for both audio out and in and a common ground for the other stuff - FSK, CW and PTT. The 756 uses one ground for all. The 870 has a connection on the aux input that when grounded both puts the radio in TX and mutes the mic, so you don't have to worry about the mic picking up shack noise while you're on a digital mode that requires SSB. The 870 also allows you to adjsut the input and

ouput audio levels on the aux port, while they are fixed on the 756.

The 870 has a connection for an external receiver.

---

756 Better than 870
The LCD display. The bandscope is more than glitz. You can really use it. For example, if you are using narrow filters you may not hear stations on either side, but you can see them on the scope. The LCD display makes manipulating the menu options (there aren't as many as on the 870) easier, you don't need the manual.

Dual receive - you can listen to two frequencies on the same band at the same - listen to both the DX and the pileup.

The user interface is much easier. For example, you can push a button to go directly to a band. The radio remembers the last 3 settings on each band. Each push of the band button cycles through them. Also, you can go to a frequency within a band just by entering the kHz part of the frequency.

While the DSP has fewer setting (i.e. on/off and amount), I think it's more effective than the DSP on the 870. Maybe if I could figure out all the menu combinations for the 870's DSP, it would work better, but other than noise blanking, I've never been able to clean up an unreadable signal using the 870's DSP. On the 756, I have been able to.

The 756 has a connection for an external receive antenna.

The 756 does 6 meters (100w all mode).

Also, if you haven't done so, check out Icom's web site. They've announced a new radio, the 756Pro. They expect to have it out February or so. It DSP filtering like the 870 and also has a DVK (those were my two biggest wants). It also has a color LCD display. I spoke with ICOM about it at the Ft. Wayne hamfest. While it looks like the 756, it is a whole different radio, so there won't be an upgrade. The street price will probably be $2600 - $3000.

> Also, can anyone tell me if the NB on the 756 is adjustable - or just
> on/off?

The NB is not adjustable, just on/off - but I find it very effective against some noises that I ocassionally encounter. When they are there they are S5 - S7 and the Noise Blanker completely removes them.

73,
Mark

Message-ID: <38460A49.864E4205@donohoeusa.com>
Source record: 92960

Hi Folks,

I am just starting to setup a Yaesu FT-8100 for mobile cross band repeating (to be used in the high deserts of NV). My truck and/or my camping trailer will be parked while I am land sailing on the Black Rock and I want to talk to other ham/sailors.

Does anyone have any experience in setting up the FT-8100 (or any other radio for that matter) for cross-band repeating?

I am wondering about the type of ant. to use (preferably a mobile ant.) and any other practical experience you may have had with a project like this.

All info GREATLY appreciated!

Tom

I presume you understand The Shack uses strictly non-teckie types,
especially since they pay near min wage and any real tech today can make
15 dollars an hour or more..and lots of places can't find techs at all!

I walked in the other day to get a 5 volt reg for a multiplexer board I
designed for FM stereo.. and the guy not only didn't volunteer to help
me, he honestly didn't know what the hell a reg is.

Remember technical skills are in high demand by industry so why would a
tech, even a fair one, work there??

Yes, this is true.. as is true for most, if not all, retail sales
work.
Expecting a RS employee to be even a fair tech is unrealistic at best.
In today's job markets even self taught techs make very good money.
At the Shack expect $7.50 maybe ..to start and probably less!

You can also use heat transfer oil, this stuff is used for the heat
treatment of metal. They produce tons of the stuff and is much cheaper than
transformer oil. There are many different grades, for fast or slow removal
of heat. I have used this stuff with great results.

If the HT needs to be durable, look at the Yaesu FT-50. It is an older model now, so the price is lower. However, the same basic radio is used worldwide in commercial applications. I was in Ankara Turkey this last summer for a work assignment, and every traffic police officer had a Vertex version of the FT-50.

Also, after market equipment is also widely available, such as spare battery packs.

If you get it, get an aftermarket Comet antenna for better performance.

Hello,

I have a nice ICOM PS-55 Matching Power Supply with Manual for sale. I used it with an ICOM 725 and my ICOM 706MKII, the connector seems to fit most ICOM radios. It is in nice used condition and is a nice smaller size. I now have a Yaesu FT-900/AT and run the ICOM 706MKII in the vehicle only. I would consider a trade for a matching Yaesu power supply in nice condtion...

or $150.00 shipped... Cont. USA

I have a Uniden BC245XLT. I trialled the limited free versions of several different programs including Senss, Radio Manager, Scan Cat and WinScan.

I found WinScan the best for me. I mainly want it for programming the scanner, not controlling it. WinScan is specifically for the 245, it is simple to use and not too expensive.

If you visit www.onelist.com/messages/BC245XLT and look in the archived discussion from around October you will find other people's views on the different programs. The general consensus there was also that WinScan was the best option.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

.The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

If you can live without SSB mode on HF, then it's a fantastic radio! The Icom software for the PCR-100, is actually written for Win95/98/NT! The software for the more powerful, higher priced PCR-1000, is older 16-bit DOS/Win3x vintage, although it will work with Win95/98, and NT, it just doesn't have the smooth feel that the PCR-100's software has. I think the PCR-100 is going for around $199.00 now, and that's a bargain!

Hi all,
first, thanks for reading, second, probably apologies due as Im new to the NG, and this has probably been a topic which crops up every year, but...

have had an icom ic-u16 for a long time now. have got the scematics for it, and have done a fw minor mods, such as reducing the tx hang-time thanks to icom-uk technical people. (very helpful)

problem is - its deaf, VERY deaf.
a friend and his oscilliscope claims -10dB down on rx gain, to me this seems HUGE, but comparing my rig with a friends, I can't hear even local stations to his 599's .

anyone had the same problem/know which knobs to twiddle in an educated fashion??

many thanks!

Steve C.

Gary, I usually find your comments interesting, but lately your useful output (which admittedly can be considerable) is being hidden by a smokescreen of rather snide comments such as that above. Indeed, the FT101 can be adjusted for max smoke with or without the aid of a power meter; taking care not to overdrive the finals and to check neutralisation (all in the manual).

You will note from my comments above that the FT101 series is over 25 years old. Modern it is not!

4416. Re: Icom 756 vs Kenwood TS-870

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-02 00:00:00 UTC
From: Steve Dove <dsp@hifidelity.com>
Message-ID: <3846B1F4.3231DB5F@hifidelity.com>
Source record: 92805

Hi Mark, and Hi Bill,

Excellent post, Mark. Nearly all salient points covered, and well.

The only thing I can add is that out-of-the-box the basic receive performance of the '756 is superior to the '870 in terms of a more bullet-proof front-end and close-in dynamic range. (Borne out both 'by the numbers' and for-real usage in tough contest multi-station environments.)

If one is not adverse to modifying radios (and these mods _are_ easily reversible if necessary) Yuri, N3BU, strongly suggests for the '870 the replacement of the cheapo IF ceramic filters with 'real' crystal filters from International Radio; that combined with an adjustment of gains between the RF and IFs dramatically improves the dynamic range issues. These make the '870 an outstanding radio and helps the true IF-DSP to live up to its promise.

The '756 as it stands is difficult to use on PSK31 too, in that there is no way to access the narrow filters in SSB mode; that this is a software lockout (no reason the hardware can't do it) is all the more galling. The limitation of a single optional filter in each of the IFs is mind-boggling, but careful choices can cover most bases succesfully. It's got to the point that I don't have to change the filters between CW and SSB weekends any more.

We '756-lovers live in hope that Icom have learnt performance, functional and architectural lessons from the '870 in the design of the new 756-PRO; if they 'get it right', it's going to be a killer radio and I'll have no option but to be an 'early adopter'.

All the best,

73 Steve W3EEE / G3YDV

the 736 is coolio.
not alot of bells and whistles but completely competent.
built in power supply, just plug into the wall socket.
built in antenna tuner.
large display and easy to use keypad and knobs.
'bout a grand used.

4419. Omni VI Plus Prices? (used)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-02 00:00:00 UTC
From: George McCrary <geo@ipass.net>
Message-ID: <D8xGOFUtr0MabM79MBwXW0jPKQI1@4ax.com>
Source record: 92808

Hey Folks,

Does anyone have ideas about what used Omni VI pluses are
going for these days? (The unit has a 500 Hz CW and 500 Hz FSK filter
in one IF and a 1.8 kHz and 500 Hz filter in the other IF).

Regards,

George (KQ4QM)

The basic performance of older radios, in regard to the reception and transmission of signals, is just as good as in the newer models. What the newer models have is more advanced bells and whistles -- more memories, more dsp features, more digital niceties, as well as the inclusion, often, of vhf bands.

If all you need is good basic performance, the olders radios are fine. If you have to have the latest bells and whistles, though, you'll go for the newer models.

Source record: 92812

Hello. I'm interested in buying a total of 5 Ameritron RCS-5 remote coax switches. They must work 100% and be at least a 70% cosmetically (in particular the control box). I am only interested in the ones with PL-259 connectors, not N connectors. A manual or box would be a plus and some 8-conductor rotator cable would be a HUGE plus (the more the better). Please let me know how many you have, the condition, what it comes with (i.e. cable, the manual, etc), and what you want for it. Thanks a lot and 73.

4426. anyone made a HF mic from an XLR mic?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-02 00:00:00 UTC
From: law <law@nh.ultranet.com>
Message-ID: <3846F8F1.AEEFF60D@nh.ultranet.com>
Source record: 92815
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I was wondering if someone has successfully taken a regular mic
($30 Radio Shack
from ~15-20 years ago) and made a HF mic. I have a yaesu FT-920 and
thought it
should be relatively simple but am not sure what pins to use on the
8-pin mic jack vs. the 3
pins on the XLR mic. I used an meter and 2 of the XLR pins seemed to go
to ground.
Do I bring the signal pin of the XLR to the PTT pin of mic jack, and the
GND on XLR
to the GND or MIC GND of the mic jack? And then just put a simple
momentary switch
in-line with the ground or signal to make it go into xmit mode? I
believe the mic and the jack
are both at 600 ohms but I could be way off.

Any response would be appreciated.

Larry,

I believe that the XLR mic has a balanced feed system, and most HF rigs require an unbalanced microphone input. You may need to get an XLR to unbalanced line transformer for it to work.

Minor correction here. The 738 is basically a 736 without 6-meter
coverage. The 735 is from an earlier generation of transceivers, and
a much different animal. The 765, BTW, is an excellent transceiver.
I used to have one and now am sorry I gave it up. If you could find
one at a good price you would love it.

Hi,
I have for sale an Ameritron AL-80 HF Amplifier. Single 3-500Z Eimac tube. 5XX serial number. 15-160 meters. Easy mod for 10 meter use too. Yes, this goes on Top Band -- just in time for the low band season. An easy 700W-800W PEP output. Tube has only a dozen or so hrs on it. ; 120 VAC wired and ready to go. Can also be wired for 220VAC.
Comes with original owners manual.
Price: $475 + split shipping -- a non-smoker owner.

See a picture at: http://www.papadads.com

Thanks

Source record: 92967

The real fix is to have an input for each band that far appart in
frequncy. Your fighting a mix of problems. The solid state output of your
kenwood wants a higher Q input circuit vs the more broadband SB-220 type.
The higher Q of course results in less bandwidth.

Using a tuned input designed for 28.5MHz on 24.xx is not a great idea.

You could band switch in a few other band segments circuits with small
relays if you were careful and creative. I've seen a few amplifier mfgrs
do it with some measure of luck.

There are patches, but none I'm happy with using.

cheers

4451. FA: ### MOTOROLA SABER 6-BAY CHARGER

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-02 00:00:00 UTC
From: pdfdisp@aol.com
Message-ID: <19991201224806.05459.00000076@ng-fi1.aol.com>
Source record: 92973

For Sale: Motorola Saber 6-Bay Rack Charger

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=207500190

MODEL: NTN4796A

This unit is in excellent shape and works great. Slot number 5 seems to not work, but someone with minimal technical knowledge could probably easily fix it. Everything else works great, and it's guaranteed to be working on arrival! This charger goes for about $700 from Motorola... Reserve on this one is VERY reasonable. Selling because it is not needed anymore. Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=207500190

4452. FA: ### MOTOROLA SABER I SECURE - VHF

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-02 00:00:00 UTC

For Sale: Motorola Saber I Secure - VHF w/Accessories

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=207518634

Model #- H99QX052A
Factory ID - H43YXN7139CN

12 channels
6 watt output
146-174Mhz
SECURENET-S capable
CTCSS/DCS/PL/MDC600/MDC1200 capable
Radio comes programmed to your specs

Radio Comes With:
VERY Good High-Capacity Battery (W&W Brand I believe)
Antenna
Remote Speaker/Mic - Model NTN6128C
Belt Clip
D-Ring Clip w/Belt Swivel Attachment

This unit is in excellent shape (but has some small surface scratches on front). It is guaranteed to be in 100% working condition. All included accessories (except battery) are genuine Motorola parts and all are in perfect condition. Selling because it is not needed anymore. Reserve price is VERY reasonable. Please email with any questions. Good luck, and thanks for looking!

4462. Re: IC-728, IC-736, IC-738, IC-765???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-02 00:00:00 UTC
From: Leland Van Koten <vankoten@home.com>
Message-ID: <3845F93C.756FFCC2@home.com>
Source record: 92984

It all depends on what you're looking for and how you plan on operating. Although I haven't owned any of the rigs you mentioned, I have used a 735 (basically a 736 without 6 meter coverage) since I was licensed 8 years ago, and running 100 watts into a low wire antenna, with relatively limited time for ham radio, I've worked 163 countries in every part of the world.

I was looking at the 746 and 756 myself, since I live in a very electrically noisy area and figured the DSP would be a big help. However, I decided to buy a DSP box and spend the money that I saved on a small tower next spring.

The other big difference is the fact that the 746 covers 2 meters, in addition to HF and 6 meters. If you don't have a 2 meter rig (or have an FM-only one and think you might want to work some CW or SSB on 2 meters), the 746 would probably save you money in the long run. However, the 706MKIIG also gives you 440 MHz, at a lower price than the 746, a very portable rig, and not all THAT much of a reduction in receiver performance.

If the bucks are important, as they are to most of us, I would probably go with one of the older rigs at this point if you can get a good one at a good price, spend the money you save on a decent antenna, and see how you operate before investing the money for a new rig.

But if you get one of the older rigs without dual pass-band tuning (and maybe even if you get a newer one with it), and intend to operate any significant amount of CW (which you'll want to do in order to upgrade before 10 meters dies again in a few years), make sure it either has a narrow CW filter or buy one. At least on the 735, the standard CW filter is WIDE, and copying a station when there are a couple of other stations transmitting within the passband is no fun at all -- at least for me -- even though it's possible because they all have different tones.

Good luck, and congratulations on the upgrade!

The heathkit cantenna manual says use transformer oil or miner oil. Mineral oil can be bough at any drug store, is completely safe, does not stain if spilled, and has excellent heat qualities. Very cheap too

There was no sarcasm intended I don't do sarcasm it is non productive.
I was try to be a little satirical about hams that twiddle for twiddling sake. It is a compulsive disease with some. I guess as a spotty youth I was tempted to think that I could improve upon the manufaturers alignment and no doubt had I a well equiped bench with all of the neccassary tools and instrumentation I could.
When I got demobed I did a session on final test for VHF sets as used by the home office. I and another of the guys decided to see how many we could do in a day and keep a high standard. I could do 17 transceivers a day including finding all of the production faults and miss wirings and a complete alignment to acheive the specification threshold etc. This was only possible by knowing the sets thoroughly and having the correct method On the IF we used a damp and tweal method which I doubt anyone just twiddling would know about and was certainly something that was not written down anywhere. This method for the IF section consisted of a capacitor and resistor on a pair of croc clips this was place accross the tuned section that was not being tuned so that the section being tuned was clearly visible. With IF

transformers designed to be critically coupled sharp sided and flat topped this was the only way to do it. I'm sure that anyone that has one of these sets to modify for 2m would not be aware of this method and would therefore only degrade the high performance of the set. When it came to the RF section knowing whioch coil to put where how to bend it how to find the correct tap for S/N and threshold plus adjacent channel rejection was also more or less a trade secret. anyone jumping in would only degrade the performance once the coils were adjusted they were glued to their formers. Any twiddler could only degrade performance. Tuning to favour a spot frequency could only produce an unstable set which would not perform well over the band.
These limitations are something which are generally applicable to any set and the adjustments for any particular design to make it perform to ALL of its spec are quite critical you will not come upon them by accident.

Now what happens to these perfectly good sets that someone with good intentions has been around with a twiddling stick. For instance how many hams have a little plastic tool with a bit of brass in one end and a ferrite in the other?
Who knows what it is used for?

>Indeed, the
> FT101 can be adjusted for max smoke with or without the aid of a power
> meter; taking care not to overdrive the finals and to check
> neutralisation (all in the manual).

And what garauntees do you have that once you are on air that there are no spurious emmissions or that the carrier is clean and that the modulation is clear and readable. plus 101 other problems. Some sets need to be flat tuned to keep them on the ground tuning for maximum smoke is not an ideal method for producing a stable well behaved set. The manufacturer faces all of these problems in the design stage and after extensive testing comes up with a spec for the production model and a method of ensuring that his product meets the published spec. Those specs are in competition with othe manufacturers and merely to attrct orders the manufacturer wants to claim the best possible spec for his product. However the wise manufacturer does not claim more than he can acheive. Tye methods that he uses are trade secrets you will not hit upon a better method by accident no matter how knowledgable you are.

> You will note from my comments above that the FT101 series is over 25
> years old. Modern it is not!

Any set designed and built in the 70s was using modern types of components Good commercial compomponents had started to evolve from the experience that manufacturers had gained from supplying the military market. They understodd the use of good practices in manufacture and there was little point in falling far below those profitable methods with the commercial product. Good methods mean optimised profits and sales they don't move away from them lightly. An FT101 is a modern set despite its 25 years.

I would be very cautious about buy a S/H set because of the eagerness of Hams to improve on what the manufacturer has worked hard and long into the

night upon.

Gary7SLL, Motto don't twiddle unless you have a properly equipped bench and you have the service manual for the kit. If you are pathologically inclined to twiddle then build a kit but don't spend a grand on a bit of kit and immediately turn it into something worth a tenner for scrap.

4472. Re: Is the FT-847 *really* good on HF ?

Newsgroup: rec.radio.amateur.equipment

I have FT-847 and lots of VHF/UHF (TM-742D, TM-V7A among others).
I think it is superb on VHF & UHF, my recommendation is, if you like the
real performer on HF, BUY HF ONLY RIG like TS-570G.

I will only recommend FT-847 for somebody looking for REAL Performer on
VHF/UHF and HF as bonus!!!

Does anyone here remember how to make a powersupply using one lm317k
with one 24vac transformer and end up with either a constant
"current" or constant "voltage" at the output by just flipping
a single pole double throw toggle switch?? I made one years ago
and used it for charging everything from nicads to gelcells but
forgot how I did it. I think a the output was taken from a
different point at the outpug of the lm317. It had excellent
voltage and/or current regulation and could be set as low as
10 ma. constant current, or as much as 150 ma constant current.
Voltage likewise was regulated at any setting between 1.t and
about 25 volts.

FS Collins KWM-2 (RE) transceiver, 516-F2 power supply, 136-B2 noise blanker. All in near mint condition. Late model round emblem with plug-in relays. All original paint, no mods. Works great on all bands (used on CQ DX contenst). Eveything near mint except small scratch on trim ring, replacement power cord. Includes original manuals for KWM-2,

power supply, reprint for noise blanker. Don't miss this one. $1085. Chuck, W6CAB (831) 688-0785.

> change the filters between CW and SSB weekends any more.

I'd like to see the narrow filters available for PSK31 well. FWIW, you can't
use the narrowest filtering (50 Hz) on the 870 for PSK either - you're
limited to the SSB filters and 1000 - 1400 Hz is the tightest it'll go.
However, I've seen discussion on the PSK31 NG that narrow filters don't
really matter to the software as it has a narrow filter in the decoding -
it's just for the ears of the op (and for the AGC of the receiver, which can
be left off).

I opted for 500 Hz filters at both IFs, so I can use PBT on narrow CW. I've
never tried the optional SSB filters, but I'm able to use PBT effectively
with the wide filters. Do the narrow SSB filters make a real difference?

Message-ID: <26kf4sgau73kmltts4jsfaepl3ijsd3fvd@4ax.com>
Source record: 92754

I have a like new Umax 312T laptop I would like to trade for a newer model HF rig with 6 meters in it. Laptop features are as follows:

Umax Actionbook 312T
266MMX AMD Processor
12.1" SVGA TFT Active matrix color display
98MB RAM
3.2GB DMA hard drive
24X CD-ROM drive
56K V.90 PCMCIA modem
2MB SGRAM; Duo view simultaneous display
64 bit 3D accelerator Graphics
Long Life Ni-MH Battery (Like new)
Full-Duplex 3D sound/speakers
Windows 98SE
Synaptics touch pad
External keyboard/mouse/video/com ports
USB port

2 years left on extended warranty plan through Best Buy. Over $1800 invested. Should be worth $900-$1000 towards an HF rig I would guess. Let me know what you have.

Source record: 92757

. This is a pretty cool looking little HT\flipphone look alike. It is it's own dualband ht by itself and if you happen to have any kenwood radio such as a 732,733,742 or some of the new 2mtr mobiles, it comes with a cord you plug into the mic socket and then plug into the th-7. It then becomes a glorified Mic\Cellphone with the keypad of a normal Kenwood mics controls. Box and Manual and acc. Manual is in Japanese but one can be obtained from PACIFIC COAST PARTS in Enlish for about 8 bucks. Asking 185.00 plus 7 for shipping. Thanks, Scott N0oba

Email me for some pictures.

>tempted to think that I could improve upon the manufaturers alignment and no
>doubt had I a well equiped bench with all of the neccassary tools and
>instrumentation I could.

Thank you for your response Gary. If I accused you incorrectly then I apologise. Your comments though (which I have snipped for brevity) do not leave the average amateur much if any room for adjustment of their equipment or modification of, for example, PMR kit for the amateur bands. Both of these activities are as much a part of the hobby as operating and the ability to be allowed to do this is one of the cornerstones of the amateur licence. It is no co-incidence that the amateur bands are harmonically related:)

A poorly adjusted pi tank output stage or overdriven PA can do as much damage from the interference viewpoint as misalignment in the earlier stages yet we still fit Load and Tune controls and Mic gain pots.

Regarding the specific case of the FT101, from what I recall, these adjustments solely alter the drive levels to the PA stage and have no significant effect upon spurious emmissions. I am one of the fortunates with a spectrum analyser which was in use at the time I owned my early FT101. The fault in question related to low output and was not 'twiddling for twiddlings sake', my response was one of several possible solutions that had been suggested and I think it quite reasonable that any amateur willing to take the covers off his kit (certainly most of my generation) should attempt this adjustment.

I would certainly agree that adjusting modern kit (my definition) should not be attempted without full knowledge of the consequences; for example the IC706 series and its ilk. It will be a sad day though when we have to turn to the manufacturer to carry out every adjustment and repair. That day is getting closer and when it does, I have no doubt that type approval will come with it. Moves towards painless access to the amateur bands are not helping.

Amen Tim. I don't think it's the nicotine though. I think the film
is tar. It's hard to get off. I can imagine what it does to switch
contacts. I just bought an NC-200 that seemed to be in good
shape. I took the knobs and trim off of it to clean it up, and then
I saw the original color. It is completely covered in a dingy film.
Inside the top cover smells like a dirty ashtray. I used to smoke
20 years ago and I remember that the same film was on the inside
of my windshield. My car had to stink, but I was so saturated
with it myself that I didn't notice. It's like the guy who has chronic
B.O. He doesn't smell it, but that doesn't mean he don't stink.
All other things being equal, I'll take a non-smokers rig over a
smokers rig everytime.

Larry WC5Y

Anyone know the function of the microswitch on the IC-756 labeled W--N. It comes in the N position, but I don't know it's function. It is located on the board on the bottom of the radio, rear of the DSP daughter board. Originally, I thought it might be to restore sensitivity on the AM Broadcast band, but, that's not it.

Thanks!
Please reply direct by removing nospam from my address...

Thanks,

Brian

Have you ever fired up a used rig and smelled automobile, big truck, or jet plane exaust? Not me, I have however purchased rigs that were in a shack of a heavy smoker mostly older tube stuff but the smoke particles had created a heavy yellow film on every part of the radio and it smelled horrible. I'm a smoker myself but the stench from the two radios forced me to clean the entire chassis.

If someone is willing to spend more for a rig that is not covered in yellow tobacco film why would it matter to you?

Ok gang, here ya go..my first post out of frustration. I have been attempting to sell an Icom IC-728 in like new condition for about a month now. I have had many interested in making the purchase, but all of a sudden everyone wants to have it sent COD! Maybe I need some educating about COD. How exactly does that ensure you get what your paying for? I'm pretty sure the UPS guy doesn't stand there while you open the box to make sure you got what your paying for. So, in essence, COD means your gonna hand the guy in brown a money order for a box... still not knowing whats inside!!!! Dah.....and pay an extra fee for COD as well. As a seller, I'm not sending a $500+ piece of equipment across the country via plane, train and brown truck only to be send back to me another 2000 miles because there was a hole in the box or the buyer changed their mind. I have been buying and selling radio gear for 6 years via the internet (paid up front before shipping transactions) and have not been burned by nor have I burned another ham even once! So, for all you can't commit wimps out there I say "get your momma to send you a COD"....Buy new gear or watch your local news paper. That way you can "go see" and you'll know exactly what your getting..or will you?

Actually...

I looked into this a long time ago (mid 80's) and from what I can
remember of what I was told....

There are TWO standards for UHF connectors. While a PL-259 is
supposed to be a PL-259, there 'apparantly' are two different specs
for the 'taper' on the threads.

While you can connect any PL-259 to any SO-239, there is one
specific combination of thread taper that allows the PL-259 'shell'
to stop down without enough thread deformation. As a result, what
'feels tight' actually doesn't grip on the ground correctly. And
secondly, with just slight vibration or other disturbance like
expansion and contraction cause the shell to suddenly loosen.

I first ran into this with my Icom 27A back in 1985. I tried and tried
but I just couldn't keep the PL-259 on there tight. I tried scoring the
threads, which help a little, but it would still back off slightly with
time,
and then there was no solid ground connection. I ended up pulling
cutting the pigtail and putting on a PL-259, and using a barrel
connector. (This was ESPECIALLY important on the 27A, as it
seems than any mismatch or antenna problem was cumlitively
destructive to the output brick!)

It's not a question of right or wrong, just different. The thing is, I
don't
know if this is a 'design' spec difference, or just something that is
real world that's the way it is kind of difference.

Hello All:

Well, I don't typically respond to these types of "discussions", however, since I seem to be involved, somewhat, in the topic "oh well".

I do not care what you do, how you do it, or where you do it just as long as I don't have to deal with it.

Do you go to a restaurant and not get asked "Smoking" or "Non-smoking"? How about a hotel? Better yet how would feel about buying food from a restaurant where the cooks/chef is smoking while preparing YOUR food?

Well, in a "nutshell" it comes down to this, choice. Isn't it nice that we have a choice?

So, with that said,

Thank you to all who replied (about the items for sale), the DX-70TH is still open, as is the IC-2710H, and the DTR-1200L.

Cheers to all,

Cliff Owen

4500. Re: Opinions on COD....

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-03 00:00:00 UTC
From: msisco9939@aol.com
Message-ID: <19991203132323.04799.00000282@ng-fo1.aol.com>
Source record: 92772

Just for information:

If you do not care about being Ripped-Off
or Miss-lead, then please disregard. If you
have been a VICTUM, I would suggest you
read on (AND SAVE)
==========
ITS TIME AGAIN...I have being seeing person(s)
being RIPPED-OFF and MISS-LEAD by Scam Artists
time and time again, and thought the following
might be helpfull. PLEASE, this is a "Personal"
point of view and "MAY" or "MAY NOT" reflect the
views of others.

Especially Scam Artists !!
****
1. KNOW WHO YOU ARE DEALING WITH !!!!
****
a) Ask for a Full Name
b) Ask for a Home Address (Note at bottom)
c) Ask for a Home Phone Number
d) Ask for a Work Phone Number
e) Ask for "Any" Special Licenses; Ham Radio,
CET, Radio Telephone, etc.
++++++++++
Notes:

Watch Out For P.O. Boxes, and PLEASE NOT
everyone with a P.O. Box is Untrustworthy
or a Scam Artist. (Even I have a P.O. Box),
and many persons live in Rual Areas.

I have just found that "Sometimes" Scam Artists
like to use them, and use Miss-Leading DOMAIN
Systems as a cover, some even using a Pay Telephone
as a return number.

BE VARY CAUTIOUS about "ANY" Bussiness or DOMAIN
provider that has "ONLY" a P.O. Box. for a return
address, with little or no substance. If it has
been under construction for some period of time,
it may be worth a second look.

==========>BEWARE<==========

Some Domain Providers, Bussiness, and Scam Artist
have easily manipulated ISP's and have been known
to Create Fake (or similar) EMail Names and
addresses to "LOOK JUST LIKE THE REAL THING" Some
Domain Providers also been known to manipulate "Tag"
counters to show they have been hit 1000's perhaps
10's of thousands of time to "LOOK LEGIT"

==========>USE COMMON SENSE<==========

****
2. ASK FOR REFERENCIES !!!!==>AND I MEAN ASK<==
****
a) Ask the Person or business "How Long" they have
been trading / swapping / on the NewsGroups.
b) Ask about "ANY CURRENT" or PAST transactions on
Internet, and Email Address of the person delt
with.
c) Ask if they are a "DEALER" and cross check with
the Telephone Company in the City the Dealer is
in.
==========
NOTES:

EBAY has a "GOOD" way of judging a persons Charactor,
and most anyone can check the FEEDBACK profile of
persons on EBAY. In General, the Higher number of
POSITIVE responses, the more favorable (or honest)
the person probably may be.

SACM ARTIST have a VERY DIFFICULT TIME in manipulating
the safe gards in Ebay, and these safe gards can add
to the price of a item being offered. Some Like Ebay
and some don't, but Ebay is a Fact of Life, and will
not be going away anytime soon.
==========
****
3. ASK QUESTIONS ABOUT THE EQUIPMENT !
****

a) Ask How Old the Equipment / Material is
b) Is it operational?
c) On a scale from 0-10, 10 being Brand New, How
would it be rated.
d) Has it ever been Repaired or Serviced?
e) Does it have the Original Model / Serial Tags?
g) Will the person selling the equipment stand behind
the purchase for a short period of time? Especially
Helpfull on HIGH END Items.
==========
Notes:

On FREQUENCY SENSITIVE equipment, make sure its in the
range you may be interested in. Again use COMMON SENSE!!

Would you spend 1000.00's of your hard earned monies
on a piece of JUNK? I see persons doing that at many
times on old beat up gear all the time. What a Waste!
==
****
3. NOW TO THE "M O N I E S ". THIS IS A VERY TOUCHY
SUBJECT HERE ON THE NEWSGROUP !!!!
****

a) BEWARE of the $25.00-$50.00 SCAMS. They are Very
Hard to collect on when a deal falls through.
b) BEWARE OF "SENDING MONEY IN ADVANCE"
c) Keep your receipt if you use a Postal Money Order

Notes:

Again this is a VERY TOUCHY subject, and probably
has many points of view. I will give up one of my
secrets. Personally, I do Not Care for COD's. One
really has no guarantee if they perhaps are going
to receive a Box of Bricks, or receive a bad check.

If one uses some simple safe gards, one can "Lock"
in a deal with a seller by offering a Postal Money
order in advance, while someone else is just giving
thought of what to do, a smart buyer has already has
a check on the way.

When a Postal Money Order is sent, it comes under
the guidelines of Postal Fraud if you have been Miss-
lead or Scammed. Altough you may not get your monies
back, rest assured, Postal Inspectors will be looking
into the complaint....Sometimes these Scam Artist get
more than they bargin for. Banks and Local law enforc-
ment have a tough time following up o a complaint.

On the other side of the coin the SELLER can
receive his funds in just a day or two, and BUYER
(if the seller is reputable) SHOULD receive his goods
in just few days.

The whole trade / transaction is completed in just a
few days. Also please note that this is ONLY TRUE
if BOTH parties are responsible persons. Many things
can interupt a transaction.

a) Computer Crash
b) Family Emergency
c) Illness
d) Cheaper price being offered

So again, its pretty important that a transaction be completed in a timely manor.

I have varified Federal Express does a Super Job on COD's, but they still are a bit expensive. UPS on the other side, well they are still improving, but my experience has showwn they can take weeks to deliver a check to the sender.

SCAM ARTIST "JUST HATE" POSTS LIKE THIS ONE, AND MANY TIMES WILL REPLY WITH A NEGITIVE RESPONSE, BUT SINCE THE NEWSGROUP IS IMPORTANT TO THOUSANDS, MAYBE THEY (THE SCAM ARTIST) WILL JUST GO ELSEWHERE

MAKES GOOD BUSSINESS (AND GOOD SENSE)

HAPPY TRADING

MS

Any equipment that has been around a smoker are worth less to me! So I appriciate those "HONEST" smokers that tell me up front their radios smell like smoke (and have that yellow ugly digny film on them). I still might buy it, just won't pay as much since I have to spend hours cleaning it up and let it air out for 4 to 6 weeks. N7JHS

Ruzzo,

I'd have to ask... Do you smoke?

I won't buy a car from a smoker.... I won't stay in a 'smoker' room
at a hotel, if I had a choice.

Sure, sometimes I have no choice, but it IS a premium to me! No,
let me rephrase that. Having smoke is a detriment. And I'm either
not interested at all, or I expect a big discount...

Source record: 92777

Hi Mark,

Yuri has the mods up on a site somewhere. I'll try and track it down and let you know.

Considering that a number of narrow digital modes are implemented as audio-in ('AFSK' if you like) rather than dumb-'ole fsk digital in, the lack of ability on most radios to use the narrow filters on SSB is grounds for sending a large man with a thick rubber hose to Tokyo to search out the perpetrators. I suspect the limitations are deliberate so that less experienced operators can't get themselves too deep in trouble. Thanks, fellas. From what I understand, the -PRO addresses this.

Well, yes, there is a tight filter in DSP ahead of the PSK decoder in most implementations. But that doesn't stop large adjacent signals either pumping the AGC, and if it's turned off, from crashing the A/D convertor on the sound-card/whatever, or even earlier stages in the receiver. It is precisely this lack of adequate bandwidth limitation ahead of the DSPs A/D stage that was responsible for the '870s close-in dynamic range problem. It holds true with ANY system where the majority of the filtering is at the end of the signal-chain; there will be headroom issues upstream. True in analogue radios too; leave the tight filtering to the last IF, and there is nothing to stop large adjacent signals overloading prior stages.

I've had to modify the switching matrix in my old '751a such that 250Hz filters are usable in SSB 'filter' mode, specifically for PSK31. It leads to a bizarre offset frequency (2kHz, and on LSB) but at least it works. And, no, it's not for the ears, because trust me, one doesn't want to be listening to 2kHz noise for too long(!) . . . It does help tremendously to get rid of the PACTOR / packet stuff that otherwise plagues reception. That proper upstream filtering is unnecessary with PSK31 is a comforting myth that has to die.

As for the filters for SSB / CW on the '756, I've been through a small number of iterations. Only having one slot for optional filters per IF is inexcusable. And there is really only space to 'hide' one off-board filter (a necessary arrangement for using some larger-than-Icom after-market filters, such as the 9MHz International Radio's).

Presently I have the Icom 232 (350Hz/9Mhz) filter in the small slot (a surprisingly good filter), an IR 400Hz/455kHz in the large slot. Replaced the FL-96 (2.8kHz/455kHz) stock filter with an IR 2.1kHz (that involves removing the board and unsoldering/soldering the filters), and removed the stock FL-80 (2.4kHz/9MHz) (again, de-soldering) replacing with a flying-wired IR 2.1kHz/9MHz filter, which is tucked down into a return in the frame casting.

Yes, it was a lot of work, but the '756 is now combat-ready for both modes. Prior to that I had to take the thing to bits and change the optional filters in the sockets for each mode. Argh!

And, yes, the better filters are definitely worth it. The basically narrower filters are necessary for contesting in any case, the better controlled group-delay improves their sound despite the reduced bandwidth, and the tighter filter edge performance and ultimate attenuation makes adjacent channel stuff just, well, disappear. As I remember though, the 2.4/2.8kHz stock combination worked quite well, so unless you're on 'A Mission' upgrading them may not be worth it. The major thing one loses going to tighter filters is that huge, wide 2.8kHz filter and the 'hi-fi' SSB possible through it, if that's a consideration.

The dual 500Hz are a good choice and do work well with the dual PBT.

News on Yuri's mod page when I find it.

73 Steve

This is my own one-owner/non-smoker/never mobile Kenwood TM-733A 144/440 dualband fixed/mobile transceiver, complete with original mic, manual, DC power cable, mobile bracket (unused), factory box, AND a Yaesu AD-3 duplexer. Just hook up power and antenna(s) and you're ready to go. Radio is in excellent+ cosmetic and electronic condition and has not been used for packet. I am selling because I now have a Yaesu FT-736 and no longer need a dualbander in my shack.

The TM-733A is only 5"x5"x1.75", but features full duplex on one band while monitoring the
other band, removable and remote-mountable front panel (remote kit not included), programmable memories that save entire operating environments (not just freq.), 50w/35w output with
selectable 10w and 5w low-power settings, dual receive on same band, program and memory scan, built in DTSS with paging, built-in CTSS, separate speaker terminals for each band, a dedicated
front-panel DATA connector, and both 1200 AND 9600 baud capability out of the
box.

Sell for $295 + shipping; price firm, no trades. Tks es 73! Jan N0JR

4508. Collins 388-UUR

4514. ht 1250 audio problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-03 00:00:00 UTC
From: Wayne <waynevan@execpc.com>
Message-ID: <384841f8$0$96893@news.execpc.com>
Source record: 92786

Our company just purchased 6 ht1250's and they all have the same audio problem. The receive audio sounds "tinny" or like the speaker is loose and vibrating. Motorola reprogramed them and they still sound bad. All other motorola radios we have sound good just the 1250's. Any ideas?
Thanks,
Wayne

> Sounds too good to be true but,...
>

Pete,

Nope, it's the real thing.
I'm not familiar with the specific MFJ unit, but the concept has been around for a while as has the equipment.
Works like this:
One antenna, #1, (your regular ant) used for receiving, has a desired signal and a QRM signal.
Another antenna, #2, picks up these signals also, but the QRM signal is the one of interest. It can be any antenna which picks up the QRM. Take the (whole) signal from ANT #2 and feed it into the line of antenna #1 so that the *QRM signal* is equal in amlpitude, but 180 degrees out of phase with the QRM signal coming from ANT #1. Thus cancelling it out. This is done with a variable gain amplifier and variable phase shifters and some kind of an RF summing point. The kind I am familiar with uses a directional coupler so the desired signal does not have significant loss - you just need enough gain in the amplifier to make up for the coupling loss and the difference in gain of the sense antenna (#2). A receiver is needed to "receive" or detect the QRM after the cancelling point - it can be your regular receiver or another one. Note that it does not matter what the interference is as long as the receiver used to listen to the null can hear the QRM. The requirement is that the amplifiers and phase shifters are wide enough to handle the QRM signal.
When all is said and done, the net effect is to create a null in the antenna pattern in the direction of the QRM (I suspect that there could also be others). It is also a little like an off frequency noise blanker.
Yes, if your desired is coming from the same direction, you're out of luck. There are versions of this which automatically track several unwanted signals and cancel them out. They have even been used by the military in "electronic" craft with lots of equipment on board to cancel out the local transmitters which would otherwise cause interference.
There are/were some used in Japan to fix a problem between cellular and aircraft.

Rare Datong FL-3 Active Audio Filter in Collins-scale EXCELLENT
condition. Probably the finest audio filter ever offered on the ham
market, the FL-3 includes auto notch, manual notch and peak filters,
infinitely adjustable low-pass and high-pass filters for SSB, passband
filter adjustable to less than 50hz for CW, and outputs for phones,
speaker, and tape. The FL-3 can be powered by any 12v DC source, and
markedly improves audio selectivity even of receivers/transceivers with
multiple IF filters and DSP. Sell for $125 + shipping, no trades. Tks

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-03 00:00:00 UTC
From: ndrech@fast.net
Message-ID: <3848257e.15632204@news.fast.net>
Source record: 92835

I have two Motorola portable briefcase repeaters that employ a pair of MX series radios. One is a VHF T-1851AX and the other a UHF T-1351AX. My problem is that I have no schematic or even a power cord. I am in need of a manual or photocopy to get these beautiful units back on the air. I called Motorola Parts ID, but this series repeater has been deleted from their records. They don't even have a master copy for reference.

Any help would be greatly appreciated.

Source record: 92838

You definitely can use PA and studio mics with good results on amateur rigs. Grab the following application note "Sound Syetem Interconnection" from the RANE web page: http://www.rane.com/library.htm#rnotes. It'll give you a wealth of information on the right (and wrong) ways to wire XLR's, or to take them back to unbalanced lines and connectors.

Depending on the mic you have, it might modulate the 920 fine, or if its impedance is too low you may need to use a preamp or matching transformer. Try it, you'll find out if the mic/xcvr will tolerate each other without amplification or matching.

I'm not familiar with the 920, but check the manual and the mic connector pins...there's probably an "audio high" as well "audio low", and you may get better audio and less hum if you DON'T ground the audio low line.

As to the PTT, I'd recommend you use a footswitch into an aux PTT input on the rear of the rig....less chance for ground loops and hum pickup.

Good luck!

FWIW, I operate PSK31 with my IC-765 using CW-Narrow receive to obtain
500 Hz and 250 Hz IF filter operation and using LSB transmit. This works
quite well and overcomes the built-in hardware limitation of the IF
filters being selected by mode only. I don not know if the same approach
would apply to the 756, but it would be worth investigating.

With the 756, I was able to 'Fool' the radio into using the narrow (CW) filters in SSB. Basically, you tell it that the installed filters are the narrow SSB filters. Since this is a menu setup option, it's easy to change back and forth when needed. The only problem is that you have to play with the PBT knobs to center the filters on each other. I've been meaning to set up GRAM and monitor the software and get some accurate numbers on the filter settings.

Rare E.F. Johnson Co. "Speed-X Deluxe" all-chrome semi-automatic key,
serial #114-501,
with built-in shorting bar. This is one of the rarest "bugs" from the
'50's, and it is in Collins-scale
EXCELLENT+ condition. Chrome is virtually unmarked, bright, and shiny.
All adjustment screws
are clean, and look and work perfectly. I have used this bug on air
from 15-35 WPM and it is as
smooth as the day it was made, equal or superior to any Vibroplex I have
ever used. I am selling it
only because I must reduce my collection to make space for the family.
Price is $390 + $10 to
pack/ship/insure, firm, no trades. Tks es 73! Jan N0JR

I have had both successful and unsuccessful COD experiences. I have had successful and unsuccessful pay in advance transactions.

The hot ticket seems to be either (a): accepting Credit Cards...at 2% to 4 % of the sale, and you can still get stung sometimes, or
(b): An internet escrow service such as i-escrow. Incidentally, the escrow service handle credit card transactions, too.

When this happens, this is what I do.

Calculate the shipping to the buyer. Ask them to send you two times that amount before you will ship.

Send the item COD for the price minus shipping.

If they accept it, then all is square. If they refuse it, then the return cost is paid in advance.

A very nice late model Collins 75S3C round emblem HF receiver for sale. It comes with two filters, and has the T9 I.F. transformer and cover over the filters..

After this sells, I will have a 32S3A RE transmitter, 516F2, and 312B4 for sale. Along with various xtal paks, tubesters, cable sets, and digital readout for the 75S3C receiver. Keep checking, its all going..

This is a 16 channel, 4 watt, scanning handie-talkie that will cover 438-470 MHz. It will do either PL, DPL or carrier squelch on any channel and has a built-in DTMF pad.

Includes heavy-duty spring belt-clip, rapid-rate battery charger and a speaker/mic.

This radio is in very good/clean condition and was used in an office enviroment

I can have your frequencies programmed into this radio prior to shipping.

$ 295.00 shipped

Please reply via e-mail and mention this posting.

> output of the preamp (200 ohms) to the mic input of the Icom.

The '756 uses none of its 'real' filters for SSB generation (regardless of those used in receive), but a little Murata ceramic filter. The good news is that it's wide-ish (say, 2.7kHz @ 6dB), the bad news is that it's a pretty sloppy filter. For receive purposes in radios where it was the main 455kHz filter (such as the venerable IC-735) it was the first one to be taken outside, shot and replaced. Does a respectable job for SSB generation, though. May not be wide enough for r e a l w i d e a u d i o however.

One could replace it (rig apart, board out and solder job) with a flying-leaded alternative of desired width (ahem, I have an FL-96 2.8kHz-wide if you need one, or Icom does a 3.3, I think).

The MXL2001 is amazing value for money, a very clean and warm sound as one would expect of a large diameter condenser. A touch bright, and the off-axis response is a bit ropey and it's not super-quiet (compared, admittedly with 'real' microphones costing an order or so more), but regardless great value for money. And IMHO totally over the top for hambone radio. The MXL2003 is nearly indistiguishable from some 'famous names'. And even more over the top etc.

Two pointers: it will sound unnaturally boomy if you get too close to it. Stay a good 9 - 12 inches away from it. There is an illusion (delusion?) here, that the heavy bassy sound from 'eating' such a mic is 'great sound'. If you're serious about sounding good rather than sounding exagerrated, stay back.

Secondly, a wind-break is essential. In studios these are often screens of nylon separately suspended between mic and talent; equally effective, although with absolutely no points for aesthetics, I find one of my wife's old nylon stockings (colour immaterial) pulled sock-like over the microphone works well. Gets a laugh, springs forth a few predictable dodgy jokes and helps break the ice, too.

> Good news is that Icoms are designed to work with a preamped electret condenser
> style mike and typically have a low input
> level. Bad news is that they superimpose a DC voltage on the

> I will try a small tantalum capacitor in series with the #1 pin of
> the mike line to prevent the 8VDC from getting into the preamp.
> Hopefully there will be no stray RF to tame. We'll see.

Don't go into the mic input. The output from the outboard mic preamp is at a comparatively high level and you'd have to attenuate it down a whole bunch to not overdrive the '756s own mic amp. In pure engineering terms it's a horrid thing to do. There is a perfectly acceptable, indeed preferable, higher-level input available on one of the ACC sockets on the back. Not only will you have to attenuate less, you will also avoid using the radio's mic amp, A Good Thing. Operationally, you'll have to get used to the idea that the 'mic level' control for the radio is now supplanted by the 'output level' control on the outboard box.

Any piece of pro- or semi-pro audio gear that can't stand 8V up it's backside is a pretender. (The only exception would be up a transformer-balanced output.) A 1uF C would fix any dc issues; but anyway, you're not going to use the mic in, are you?

It's easy to see how the rack-fulls'o'gear happen, other than it's a whole new fun techno-hobby:

Man gets good mic; sounds good. Not really suited to radio's mic amp; man gets external mic pre; sounds better. Hmm, highs and lows maybe needs a bit of tweaking. Man gets outboard equaliser; hmm, nice. Man decides rig's speech processing is declasse; man buys outboard compressor to make himself sound chunky; ooh, him sound like WABC now! But, all the gain from the compression has brought up lots of shack noise; b-a-a-d. Man gets noise-gate/expander to drop away gain in gaps; better, but now sounds dry, with no 'space'; man gets reverberation unit . . . . . .

I wish you luck and fun. Maybe one day you'll have more gear hanging on your mic than Bruce Springsteen, too! But any steps you take to make better audio on the air can only be good news.

73 Steve W3EEE / G3YDV

> > Thanks in Advance.........

It always amazes me when I look for an old ad that I was sure was quite
common, how many magazines I have to look through before I find the ad
I need.

Anyway, QST for May 1968 has an ad for the HW-18, inside the back cover.

"200 watts PEP on 160 meters for $109.95
New Heathkit HW-18 series 2-channel SSB transceivers for
160 meters, MARS & CAP"

Some of the features listed include:
-200W PEP SSB
-25watts input with carrier for AM compatibility
-fixed tuned for easy PTT operation
-automatic level control
-clarifier control adjusts transceive frequency
-relayless transmit-receive switching
-local-distance switch prevents receiver overload
-12 tube circuit, 17 tube function
-operates mobile or fixed with HP-13 or HP-23 power supplies

HW-18-1
for CAP
4450 to 4650KHz
USB
clarifier range: +-100Hz
selectivity: 2.7KHz @6dB, 6KHz @ 50dB

HW-18-2
for MARS
4450 to 4650KHz
LSB or USB (but I guess this may be determined by the local oscillator)
clarifier range: nolisting
selectivity: 2.1KHz @6dB, 7KHz @ 60dB

HW-18-3
for 160meters
1800 to 2000KHz
LSB
clarifier range: +-250Hz
selectivity: 2.7KHz @6dB, 6KHz @ 50dB

Common specs
sensitivity: 1uV input provides at least 15dB signal to noise ratio
intermediate frequency: 3395KHz
image rejection: 100dB
IF rejection: 50dB
receiver audio output: 1Watt
unwanted sidband suppresion: 45dB min below peak output
carrier suppression: 45dB min below peak output

power requirements:
+800VDC @ 250mA
+250VDC @ 100mA
-130VDC @ 5mA
12,6VAC or 12.6VDC @ 3.75A

I remember one article in 73 where someone added a VFO, though I
can't remember which model; it was someone overseas, so either it
was the 160Meter version, or they were using one of the others on
80Meters. I thought he described an external one, but I also have
a picture of a multi-turn dial where the clarifier control went, so
he must have also tried a built-in VFO.

Any old Handbook will show you how to apply a VFO signal to a crystal
oscillator. I don't remember ever seeing a schematic or block diagram,
so I can't be sure, but considering the low cost, I'd bet that it's
only a single conversion transceiver. So the signal frequency plus
or minus the IF will tell you where the crystal or VFO needs to be.

Hi! I have for sale a heatkit HF station,SB-401 & SB-303
with all the cables and manuels.The transceiver SB-401 needs
repairs,I turned it on a few days ago and I saw smoke coming
out from under the chassie,since then it does not transmit.
I didn't really try to fix it because my electronic skills
are very poor.The receiver SB-303 works really good.
Both pieces are very clean.I bouth them last year and
paid $450.00 for them,I will sell them for $250.00 obo...
If interested,email me direct...Thanks...Eric....73

4558. TS-450S CW problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-04 00:00:00 UTC
From: Joel Dorfan <bdorfan@FRED.icon.co.za>
Message-ID: <38494c27$0$63358@helios.is.co.za>
Source record: 92694

Please can you help, I am in the middle of nowhere with no technicians.

My TS450 recently developed the following problem.
When the manual key is inserted there is a continuous side tone when the rig is in anything but CW mode (TX is not activated just side tone). If the key is keyed you hear an additional side tone superimposed on the one heard without they key being keyed.
In CW mode, if the rig is keyed with VOX on, with the key or with the send button, (with or without the key inserted) the TX holds in and will not drop out until the rig is either switched on and off or toggled bewteen CW and any other mode.

This causes a problem when operating CW as the rig never drops out of TX (without the fiddle mentioned above) and also when I switch to side band then I have to unplug the key otherwise I have the continous side tone ringing in my ears.

The rig came with me on a pretty rough off road trip, it was never used and stayed in its box, could something have worked loose? I have done the obvious checks for loose plugs etc. inside the rig and have done what I think is a full reset but no joy.

Any help will be greatly appreciated.

12 volt gel cell batteries for sale. Used but all load tested good. 30 day guarantee !!! Removed from burglar/fire alarm systems and replaced every 3-5 years with new ones as preventative maintenance for our customers. I have sold hundreds of these to the ham radio QRP boys on the QRP-L. I will stand behind every one sold 100% ! Prices listed INCLUDE shipping via UPS to your door.

12 volt 4AH --- $10
12 volt 6AH --- $13
12 volt 7AH --- $14

I have only a few 4's but loads of the 6's and 7's. Brands are mixed: Yuasa, Interstate, Portalac, Radionics, Power Patrol, MK Battery, Batteries Plus, Power Sonic and a couple of other brands. I do not and will not sell Panasonic brand as they have proven themselves to be total junk. Please email me with quantity desired and your zip code.

I have a very nice condition Drake mic model 7077 that matches the
TR-7 line. The plug has been changed to a switchcraft right angle plug
for the 4-Line radios. I have used it on my TR-4Cw, T-4XC, etc, and
it works great.

I would like to trade this mic for an ASTATIC 10D with a G-stand. Un
amplified is preferred, but will take either.

Will consider other trades if no Mic is offered. What have you got?

Source record: 92705

Listened to the HF bands recently? Seems to be an increasing
interest in "good" audio. Could be that modern day microprocessor
-controlled rigs leave little for the average ham to experiment
with.

Whatever the case, hams are turning away from the punchy,
Heil-type sound, and towards wideband, more-pleasant-to
-listen-to "broadcast" transmit audio. Course, some guys go
whole hog with a rackful of audio processing gear. Fun,
but expensive.

I ordered an MXL2001 studio condenser mike and an ART
Tube-MP mic preamp and am looking forward to experimenting
with hi-fi audio for my Icom 756. I plan on going from the unbalanced
output of the preamp (200 ohms) to the mic input of the Icom.

Good news is that Icoms are designed to work with a preamped electret condenser
style mike and typically have a low input
level. Bad news is that they superimpose a DC voltage on the
mic line to power the electret element.

I will try a small tantalum capacitor in series with the #1 pin of
the mike line to prevent the 8VDC from getting into the preamp.
Hopefully there will be no stray RF to tame. We'll see.

Wondering if any have thoughts or experience to share regarding
these pursuits.

You say 'RF feedback'. How exactly do you mean? Live RF all over the
shack? Or is the PA taking off on its own? If the latter, pay attention
to the PA neutralisation.

4574. Alinco DJ-V5T handheld

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-04 00:00:00 UTC
From: fjones@ionet.net
Message-ID: <82btr3guj1@ionews.ionet.net>
Source record: 92710

I just bought an Alinco VJ-V5T handheld and have the following questions:

It has an SMA (screw-type) connector for the rubber duck antenna. Where can BNC or 239 adapters be found to allow use of external antennas?

I was disappointed to reallize that out of the box, the radio couldn't be tuned to receive the wx fm channels, 162.55, .40 and .475. It only allowed reception of the 2m, 440, and broadcast fm band. I hear that the rig can be opened up to allow wide reception right up to near a gig but this isn't addressed in the manual. How is this done, and does it have any downsides such as poor rejection of cross mod or intermod?...

I have two TM-V7As here.

Love 'em. Check my web page for information on building the PG-4S cable yourself for PC programing, using a V7A for packet (and clear pinouts for a TNC cable), a link to an excellent site on Remote Control Operations and a couple more ideas. Follow the link in CONTENTS to 'My Shack'

You can get a good idea of what the V7A is, can and won't do for you by reading the manual - available online at http://www.kenwood.net - click on Downloads, then follow the links through AMATEUR, etc.

Burghardt's (http://www.burghardt-amateur.com/) is just a titch more pricey than some of the others, but they ARE a Kenwood service center. Can be a real bonus if you need fix'n (never have on either of mine - one's mounted in an off-road 4x4 and gets the bejeebies bounced out of it regularly). They also have one of the best (at least if you read these news groups) reputations for customer service/staisfaction. (And no - I have no connection to Burghardt's)

Only real bonus I see on the FT-8100R is it has a faster scan speed. But then, that's why I bought a scanner. In fact, one of the local boys who had an 8100R, traded it in to Burghardt's for a V7A - he's way happy with his V7A as well.

You may want to hold off a bit as Kenwood is very soon to release their new TM-D700A - same basic features as the V7A plus built in APRS functions. See the HRO Winter 1999 catalog, Pg 18 or run a web search on TM-D700 for info. I think some of the other manufactures are also about to release new radios - but no real info here.

Can't comment on the others.

4576. FS: Datong Automatic RF Speech Processor

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-04 00:00:00 UTC
From: Jan Robbins <swanman@cfu.net>
Message-ID: <38497EB1.89B53FA@cfu.net>
Source record: 92712
Cross-posted to: alt.ham-radio.marketplace,rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchor

Datong Automatic Speech Processor, generally considered the best outboard processor ever offered on the ham market, in good working/cosmetic condition. Because it converts your mic audio to RF before processing, then down-converts it back to AF at the output, all spurious products are removed before audio reaches the transceiver. Processing level can be as high as 30db, with as much as 9-12db signal improvement, and NO spurious radiation. Input is via a 4-pin mic connector wired for Kenwood. Output is via two phono plugs, one for Audio and one for PTT, so a cable and plug can be set up for ANY transmitter/transceiver. Operation is simple and foolproof, and the original Datong manual is included. I have used one of these for years--it helped get me 5BWAZ--and I'm selling this one only because I no longer need two. $135 + $5 to ship, price firm, no trades. Tks es 73!

Kenwood TR-751A 2 meter all-mode transceiver:

2 meter all-mode transmitter with 25 watts power on USB, LSB, CW, and FM modes. GAs-FET preamp for less than 0.13 uV sensitivity (10dB S+N/N) on SSB and CW and less than 0.2 uV sensitivity on FM. Dual VFOs and 10 memories. Programable band scan / memory scan. Includes an all-mode squelch circuit, noise blanker, RIT (receiver incremental tuning), and semi break-in with sidetone for CW mode.

Only real imperfection is that the UP button on the hand mic has been replaced with a similar unit, but is not the same color (see picture) and one of the bottom rubber feet is has been replaced with a stick-on substitute. Includes radio, hand mic, original manual, and original shipping carton. Asking $425 shipped insured via Priority Mail to your location in the continental US.

I haven't posted this one on eBay yet, and I'd rather not. Here is the picture:

Rick, I have bought 2 of the Icom 2800H Radios and it is the best
radio that I have had so far on 2meter 440. And I have had a bunch.
I crossband repeat my 440 repeater to other 2 meter freq. all the
time.
Also you can mod it for 900 meg recieve.
K5JOE

Hello--

Tobacco smoke isn't as dispersed (diluted) when compared with other environmental smoke. The air doesn't get exchanged very often in most rooms-- and especially so in cold climates.

The worst repair job I ever endured was fixing an RCA tubed color set that resided above the bar in a bar and grille which apparently specialized in fried foods.

The exterior and interior of the set featured an orange/brown coating of dried crud that turned to smelly slime when wiped with ammonia-based cleaner. The crud was also conductive and had caused a problem in the HV power supply due to carbon-trail tracking.

The only similar problem I ever encountered was an ancient black-and-white TV in the living room of a very poor, elderly couple who heated their home by kerosene space heaters. The screen and CRT were coated with black, oily soot. (BTW, the house was threadbare but spotless.)

Any variety of smoke residue around electronics rates as bad news .

Paging micks are usualy balanced but are easly wired for unballanced
use. Pro units (shure, EV, etc) are usualy 200 ohms most of the import
units are 600 ohms. A transformer is not nessary though you may have to
tweek the mic gain pot. I recomend that you remove the XLR and use an
original radio plug as this will make for simpeler wiring. If the mike
is wired for ballanced operation, the wiring should be as follows: pin

1 gnd, pin 2 high, pin 3 low. Most of these mics have 4 wires and a shield, the extra 2 wires being for the PTT and usualy nether is grounded. You should be able to easly wire it for your use, keep in mind that extra funtions like channel control will be right out.

>with the wide filters. Do the narrow SSB filters make a real difference?
><SNIP>

I dug out this old post I made perhaps a year ago concerning how I
used my 756 (since sold) on PSK:
==========
FYI: I have the FL-100 and FL-52A 500Hz RTTY/CW filters installed in
my IC-756. To use them on psk31, I went to the setup menu and told the
menu that they were the FL-223 and FL-222 pair (narrow SSB filters). I
also set the CW-N and RTTY-N modes to use these "new" filters.
(Thanks, Ron Higgs and ZL1BPU for the tips on doing all this.)

I can now operate all modes RTTY, CW, and psk31 at 1000 Hz with the
500 Hz filters working for me. SInce the rig shifts those filters
around according to what it _thinks_ is the appropraite offset, I have
to "undo" the shift by use of the PBT knobs. I have found the
appropriate PBT settings to be:

Mode PBT Knob Position*
RTTY-N inner 4
RTTY-N outer 8
CW-N inner 4
CW-N outer 8
psk31 inner 8 (USB-N mode)
psk31 outer 11 (USB-N mode)

* (1=full CCW, 11=full CW)

With my casdaded filters, I can narrow any of the passbands by tweaking the PBT positions in the usual way. For instance, I can use psk31 at 9 and 10, with about 200 - 250 Hz passband. I can actually see it narrow down on the waterfall display as I tweak it.

4619. Cross-band repeat with IC-2800H ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-04 00:00:00 UTC
From: rick@kirchhof.com
Message-ID: <3848950d.72245954@news.jump.net>
Source record: 92869

I am trying to find out if the ICOM 2800H dual band mobile will do cross band repeat. I have looked at info on the radio and asked the sales folks if this is possible.

I must be missing something. The manual shows some auto repeater functions, but they relate to automatic setup of duplexing on receive signals.

Any help appreciated.

4620. **What Yaesu filters go with the Yaesu FT-900?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-04 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <19991204012239.02041.00000485@ng-bg1.aol.com>
Source record: 92870

Hello,

I have a Yaesu FT-900/AT. The radio is discontinued about three years now and I am trying to find out some information about filters for it. I know of two that fit it because they are listed in the radios instruction booklet, they are the XF-110S "SSB" filter and I believe the XF-110C "CW" filter. Are these the only two filters that Yaesu made for this rig? Do any of the other "YF" filters for the FT-1000 ect. work with the FT-900?

Does anyone have an older copy of an Amateur Electronic Supply catalog that would show the Yaesu FT-900 and the list below it of all the accessories and filters that work with it? I understand there are other companys that make filters for the Yaesu FT-900 but I am interested in knowing what filters Yaesu made for it.

Thanks for any and all assistance!

I have for sale the following:

Icom PCR-1000 wide band receiver, covers .100 MHz - 1300 MHz, all mode (AM,FM,WFM,USB,LSB,CW). This radio is blocked in the upper 800s. Radio is n very good shape, and comes with orginal box, manuals, cables, antenna. Asking $300 or best offer.

Ranger RCI-2950 10 meter mobile rig. Covers 26-32 for both RX and TX. All mode radio (AM,FM,USB,LSB,CW,PA). Radio is in very good condition, and has only been used a few times. Asking $180 or best offer.

Yaesu FT-901DM HF Tranceiver. Covers 160-10 meters, all mode, 100 watts. This radio was the last of the solid state/tube finals generation. Radio has voice processor, digital display, memory and a few other bells and whistles. Radio is in good shape and works great. Asking $275 or best offer.

Hello,

Has anyone noticed that on the Yaesu FT-900 the power meter reading shows markings up to 150watts? Why? The rig is only rated at 100watts output...?

Was Yaesu ever planning on making the rig put out 150watts of RF?

Just curious... =)

>how many
>hams have a little plastic tool with a bit of brass in one end and a ferrite
>in the other?

Not me. I'd forgotten all about these useful little aids. Haven't seen
one since Grace Archer died.

<snip everything else. All agreed with>

Now my problem. I have a 101ZD MkIII, which suffers from intractable RF
feedback on all bands above 40 Mtrs.

I have removed all ancillary kit (Homebrew keyer, Datong FL1, Vogad
amplified Mic., etc.) I use a link-coupled ATU with current-sensing in
each leg of open-wire feeder, allowing precise balance of feeder
currents.
I have decoupled/ferrite-beaded/rf-choked everything in sight, but the
problem persists. Any ideas, is this a 'known' fault?

I've had two suggestions so far.
1. Phone patch socket.
2. 7Mc trap on trimmer board.

1. has been removed and decoupled.
2. not yet investigated.

All ideas, thoughts, definite whizz-bang 100% solutions welcome.

Ay thengyew.

Hi Phillip:
The Collins R-388/URR is a general coverage communications (from 540KHz to 30.5MHz) rec, triple conversion, superhet, 18 tubes, made 1951 to 1962, fairly common on the market, used price $210-380. It is the military version of the Collins 51J-3. Should be a good rec and if in good cosmetic, electrical conditions and if you like old radios I would snap it up. Realize that it is tubed and what we refer to as a boat anchor, but in it's day was the dream rec of many.

Have two beautiful EV-664 mics, but only need one. Will sell one,
Collins-scale excellent++, bright, clean, shiny, and in perfect working
condition, with 6' cord, instructions/tech. data, no stand, for $155 +
shipping, firm, no trades. Tks es 73!

Hi Gary, long time no hear(see!)
Lets not get carried away with this business over a couple of very minor
adjustments to the tuned circuits in the latter stages of the tx drive
chain in an FT101. Adjustment of this very simple PA system is well
within most amateurs capabilities AND IS DETAILED IN THE OWNERS
MANUAL!!. As I stated earlier in the thread, I do not advocate
twiddling for its own sake.
For Gary 7SSL, are you saying you have never delved into any of your new
kit! Are all your cover screws virgin? (never been unscrewed!) :))

I am well aware of the snobbery attached to bottle and board swappers.
It is more than a little vane to object to a proceedure that produces
results. Your objective no doubt is to have a working set. The fact that you
have some boards left over doesn't mean that they have to be relegated to
the scrap bin. You can havce several known good boardfs as spares or
sufficient to build the second set. If you get one good sert then with part
objective complete you are in a better frame of mind to aproach the next
stage of the project.
I spent quite a bit of time developing ATE (Automatic Test Equipment) for
use by anyone that felt able to use it as a tool. (board kockeys or no).
When one considers the commercial aspects and scientifically analysis the
objectives and the situation that exists constrained by the technical
possibilties the resources and the personelle available one comes to certain
conclusions about the cost of manufacture, the cost of repair and the
feasibilty of both. A repair will always cost several time a replacement
because all of those proceedures employed in manufacture have to be used
additionally fault find diagnostiocs dismantaling correct identification of
any failed component the removal and replacement reassembly testing and
final xcosmetics are just numerically more operations requiring a higher
level of skill so become non competative. If you then design sets to be
thrown away upon failure the design may be greatly simplified and cheapened
you don't need to provide screws for access components may be permanently
solder welded in place as they are not intended to be removed this can be
considerrably cheaper that a design that permits servicing. As a
manufactuirer faced with competition which would you chose to maintain your
market share and keep your customers happy. A customer that gets a faulty
item replaced immediately without question is a much happier chappy than the
pone that takes his kit back to face reppairs of unknown cost and of
duration unspecified and when he gets his kit back there is a high

probability that the fault is not cured or the fault returns shortly after for some unspecified reason. The complexity and package density of modern kit has long since made the repair route if not unattractive but often completely impossible.
Old kit will soon be unable to meet the increaingly tighter specifications and operational requirements. Certainl the dedicated amatuer building from scratch will note aproach any commercial set either on price or technical performance or finish. certainly size and weight will not be approachable by the amature.
Specialist and cutting edge ciruitry is really the areana for the hobbiest of the future.

> I suppose that board-swappers are today's bottle-swappers and probably
> call themselves 'electronic' engineers, (rather than 'electronics
> engineers) as though they need to switch themselves on in the morning.
> Ho hum. I suppose that the real engineers have become reconciled to
> referring to themselves as graduate engineers.

And very snobby they can be about it, completely without cause.

> None of that has anything to do with solving the problem of course.

I have an as new 6 month old Bearcat BC-235XLT handheld scanner for sale. This scanner has 300 memories and Trunk Tracking capabilities. The scanner comes with 2 ni-cad battery packs, charger, belt clip and rubber duck antenna. This scanner has very little time on it and is a 10 out of a 10 functionally and cosmetically. I am the original owner and purchased this brand new. I have the box and all documentation. $150.00 plus shipping.

I am looking for comments on the Icom IC-706, Yaesu FT-100 and Alinco DX-70TH from owners of these rigs. I want something primarily for CW use. I have heard the Alinco uses a poor audio filter for CW. Have also heard alot of bad things on the IC-706 for CW work. Would just like to hear what everyone has to say on these rigs on cw before I lay out some big bucks. Please email me personally at: tje@usol.com
Thanks in advance.

> kit! Are all your cover screws virgin? (never been unscrewed!) :))

1) I have the experience to know when to leave well alone, that is the stock in trade of a professional.
2) I have the correct tools such that you would never know that I had been there.
3) I have the knowledge training and experience to know what not to touch and how to test the alignment without actually adjusting anything, (remember that little plastic tool with the bit of brass and the bit of ferrite?)
4) before actually parting with my hard earned dough I make sure that whatever it is that I'm buying is in good nick.
On;ly a twerp would spend good money and then throw it away by ruining the new toy.

If I get something for a fiver at a junk sale that's a different matter.

Where I might be tempted to tamper is with very early kit of unknown history which I want to restore to the condition in which it might have been found shortly after manufacture. A project which I would love to get involved in would be to have examples of every possible old set restore it to it's original condition and then with modern test equipment measure its performance and record the specifications to be published in book form with pictures and as much history as possible. I would like to trace out the history of Radio without the bias of particular companies that exists in most of the stuff which I have so far.
What for instance was the bandwidth and threshold of a coherer or a magnetic band detector. To get an AR88 or HRO back to spec and make some noise figure measurements and check the thing out over the design frequency range.
Just how lucky where the people involved in the first transatlantic communications, what differnce did the Armstrong set make what was its performance like when measured with modern test equipement? was the performance really superior or did those usingit have a better antenna and some good luck. Where their operating methods better? al of these questions have not been answered or documented in a coherent way. soon it will be too late and too distant from the events to be realistic or to be written up with a sense of the acheivement. Who familiar with a mobile phone would see and appreciate the wonder of communication over a few hundred yards by Electromagnetic Radiation.

Gary7SLL, I'd love to make the first voice communication by X-Ray

How?

Also the mute function is a waste. What it should have is a mute function when you transmit, only then the other band should mute.

4657. Info On Icom Cloning Cable OPC-478

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-05 00:00:00 UTC
From: Gary Zabriskie <garyz@cyberhighway.net>
Message-ID: <82ep2p$e2u$1@news.cyberhighway.net>
Source record: 92607

I am looking for a schematic or other description of the PC to radio cloning cable used with the Icom IC-2100 2mtr FM mobile rig (and also the Icom 706MkII). Icom's model number for this cable is the OPC-478. What exactly is included with this cable to warrant a $45.95 price (in latest A.E.S. catalog)? I have access to cable crimping for these types of connectors, if someone can give me info on what pin connections and components, if any, are needed.

And what is up with Icom charging $46.95 for a 23 foot length of red and black wire (OPC-347 power cable), $85.95 !!!!! for a microphone extension cable (OPC-440) and (I really am not making this one up) $33.95 !!!!!!!!! for a speaker extension cable (OPC-441). Geez, that last one must have $2.00 worth of wire and two 1/8 inch mono phone plugs on it. Cripes, you could spend 2/3 the price of the radio for a few wires!!

Thanks in advance for info on the PC cloning cable.

Hi,
Your built in tuner in FT900 will match it even better to drive any amp. But generally speaking Linear amp ususally have tuned input circuit so no need to have a tuner between amp and exciter. Of course, if your antenna system is not optimized for low SWR, you need an antenna tuner between amp and antenna.
Good hamming!!!

This solid state radio is in excellent condition. It is rated at 100 watts output on 160 through 10 meters, including all WARC bands. General coverage from 0.15 to 30.0 MHz. Ten memories (mode & freq), band & memory scanning, dual VFOs, clarifier, IF notch filter, IF shift, switchable RF preamp & attenuator, noise blanker, full breakin CW, speech processor. Capable of CAT with optional interface (not included).

Modes include USB, LSB, AM, CW, and FM. Includes narrow CW filter (600 Hz). Modified for all-frequency transmit. Will ship with original owners manual, original MH-1 hand microphone, and 12VDC connector. This unit is guaranteed to work, as it's been in weekly use up until recently. Look at the photo to see the excellent condition of this rig.

Asking $520 plus shipping. May consider some vintage tube gear as a partial trade (R-390A & CE 100V especially).

The radio of course has something that no other radio on the market
today has, and that is the rca jack on the side of the display for an
input video signal, for starters. A color Display with 4 different
looks and colors, also one thing I really like about it is that it is
modifiable for 800-995 MHz and the squelch knob can be set to act as
an RF attenuator after you go past the 12:00 position.
It comes with encode/decode and very easy to Edit each setting on each
Mem.Ch.
Just my Opinion, but I have had 15 or 20 Dualband Mobiles and this one
has more goodies and better looks than any of the others.
What other Radio do you know of that will let you hook up a video
camera to it and show color video on the 3inch square color TFT
Screen?

I have a problem that has just started with my IC-751A. When you first turn the rig on everything works fine. After about 5 min of just receiving the sound drops out and signal on S meter goes to 0 . In around 3 mins the audio starts comming back with a distortion sound. That soon goes away and all is fine. It dont do this all the time. Just when the rig has been off for a day or so. Maybe someone around has seen this before. If so please send a reply direct to me.

thanks, Mike W4MJR

Message-ID: <384B0129.1BD43A05@juno.com>
Source record: 92615

For Sale:
Alinco DJ-180TH 2 meter FM HT. In very good condition only one month old, bought from
Ham Radio Outlet. RX coverage 130 to 170 MHz. TX coverage 144 to 148 MHz modifiable.
5 watts out with supplied battery pack and on 13.8 VDC. I am including the optional DC jack
converter and cigarette lighter cable. Also included is a Radio Shack 5/8 wave 2M mag-mount
mobile antenna with BNC adapter. All this gear is only about one month old and includes boxes
and manuals and works perfect. Reason for selling: my wife had to go to the hospital and I don't
have insurance so I have to pay the bill. (It's been a bad month).
$175 for all plus shipping.
(If it had more age or use I would sell it cheaper, but I am already losing about $40).

For Sale:
Alinco DJ-180TH 2 meter FM HT. In very good condition only one month old, bought from
Ham Radio Outlet. RX coverage 130 to 170 MHz. TX coverage 144 to 148 MHz modifiable.
5 watts out with supplied battery pack and on 13.8 VDC. I am including the optional DC jack
converter and cigarette lighter cable. Also included is a Radio Shack 5/8 wave 2M mag-mount
mobile antenna with BNC adapter. Forgot to mention in earlier post DROP-IN CHARGER.
All this gear is only about one month old and includes boxes
and manuals and works perfect. Reason for selling: my wife had to go to the hospital and I don't
have insurance so I have to pay the bill. (It's been a bad month).
$175 for all plus shipping.
(If it had more age or use I would sell it cheaper, but I am already losing about $40).

Email: W4UDX@juno.com Thanks, Mark.

You gotta be kidding! That last post was from a vendor that sells the illegal stuff. Lots of legitimate need for a rig that covers that frequency range isn't there. The people that sell this stuff should not get income from valid hams. The hams that still operate illegal CB gear (anything that is not type accepted for CB which includes any modified gear that was previously type accepted) are not really hams. They are just taking advantage of these legal privileges while still abusing FCC laws.

It bothers me greatly that many people on these pages accept and cater to such activity. Many posts are related to opening up the transmit on HF, VHF & UHF gear. Other than MARS/CAP all of which have access to legal modification information not of these modifications serve any usefull or legal purpose. Even those with valid commercial station liscenses can not legally use modified ham gear on their own frequencies.

Let's help clean up the ham bands by not making it easier than it already is for non-technical persons to get gear to operate all over the place. Hopefully the FCC watches these posts as well. I do know that a local Indianapolis CB equipment vendor was approached by the FCC at the dayton Hamfest last year and asked about CB/HAM modifications. When he indicated that he might be able to help the FCC person identified himself and indicated that he could confiscate the equipment he was selling but would not do so. He said that his name and company name would go in file with a note about the modification activity at Dayton and if he poped up again they would take action.

I hope Riley Hollingsworth catches all of them soon.

True. But they are unused, thus the need to "mod" a 10M radio is entirely unnecessary.

Board swapping is a powerful troubleshooting technique. It allows you
to quickly localize the trouble. Then you can proceed to component level
troubleshooting and repair (if that makes economic sense). Whether
component level repair makes economic sense depends on the particular
piece of equipment. For most consumer electronics, it probably no longer
makes sense. But for more specialized equipment, and for out of production
equipment, it makes very good sense indeed.

In the broadcast business, we like to buy equipment in pairs, partially because
it gives us a ready testbed for board swapping to localize faults. Downtime is
at a premium, but spare boards are so expensive that keeping a stock of them
on hand is prohibitively expensive. With duplicate machines, we have the spares
at hand for testing, but get everyday use out of them as well. We tend to keep
equipment for a very long time (because broadcast equipment is low production
volume and hence extremely expensive). Often we keep it in service past the
date when the manufacturer is no longer in business, so it is important that we
can fix it ourselves.

>I spent quite a bit of time developing ATE (Automatic Test Equipment) for

>additionally fault find diagnostiocs dismantaling correct identification of
>any failed component the removal and replacement reassembly testing and
>final xcosmetics are just numerically more operations requiring a higher
>level of skill so become non competative.

At least in my industry, and to a large extent in amateur radio too, this
is not true. Because of the specialized nature of the equipment, and the
short production runs, replacement boards are very high cost, and have
poor availability. That makes component level repair more economical,
even though it requires people having a higher degree of technical skill.

Equipment with self-diagnostic features is welcome, of course. Anything
that helps us pinpoint a problem quicker and easier is to our benefit. But
board level replacement as a repair technique is still too expensive for
us.

> If you then design sets to be
>thrown away upon failure the design may be greatly simplified and cheapened
>you don't need to provide screws for access components may be permanently
>solder welded in place as they are not intended to be removed this can be
>considerrably cheaper that a design that permits servicing.

That's all very well for a device that costs $19.95, but you don't save much making
an $1800 radio into a throwaway item. The cost of screws and connectors and the
like aren't a significant fraction of the cost of the equipment.

>As a
>manufactuirer faced with competition which would you chose to maintain your
>market share and keep your customers happy. A customer that gets a faulty
>item replaced immediately without question is a much happier chappy than the
>pone that takes his kit back to face reppairs of unknown cost and of
>duration unspecified and when he gets his kit back there is a high
>probability that the fault is not cured or the fault returns shortly after
>for some unspecified reason.

But if it costs $1800 a pop to do that, either the customer or the manufacturer
is going to be very unhappy because one of them is going to have to eat that
cost. There's an economic point where throwaway equipment doesn't make
sense. Automakers could just weld the hood (bonnet) shut and give you a
new car (or force you to buy a new one) when yours needs a repair. But they
don't. It isn't a cost effective strategy. For a $12 toaster it may be an economic
strategy.

>The complexity and package density of modern
>kit has long since made the repair route if not unattractive but often
>completely impossible.

I haven't found that to be the case. Certainly VLSI and surface mount technologies have changed the way we work on equipment, but they haven't made it impossible to do so. In fact I prefer to work on SMD rather than thru-hole equipment. It is easier once you learn the proper techniques.

>Old kit will soon be unable to meet the increaingly tighter specifications
>and operational requirements. Certainl the dedicated amatuer building from
>scratch will note aproach any commercial set either on price or technical
>performance or finish. certainly size and weight will not be approachable by
>the amature.

That's largely true, especially in regard to packaging. Amateurs don't have access to the injection molding equipment which allows the manufacturers to produce compact, lightweight, and attractive equipment. But amateurs can still produce equipment with better performance, at least in particular areas. If we want a +40 dBm 3rd order intercept, we can build a front end to do it. The mass market might not do it for a number of reasons, not the least of which would be the size of the heatsink required, but we can.

>Specialist and cutting edge ciruitry is really the areana for the hobbiest
>of the future.

Certainly, as it has been in the past. One-off construction doesn't lend itself to mass market manufacturing methods. It is, and always has been, the province of the technician or hobbyist working at the prototype bench.

I have an Icom 24AT with BC-72 Desktop Charger and 2 Ni-Cd batteries.
Also included is the instruction manual and a short ear mounted boom
mike.

This radio is a Dual band with single band receive.

Radio is in excellent condition and works very well. Both batteries
maintain their charge very well.

I'm asking for $160 plus shipping my guess around $8 to $10.

Great radio for Xmas!

Anyone interested in purchasing this radio please send an email to:

: Time will, tell.
: If More hams would take further training as suggested above so that the
: standard rises it would go some way to ameliorating the situation where type
: approval was inevitable.

: The introduction of only type approval would be a sad day IMHO, but there
: could be a centre ground where extra qualification brings extra privileges.

Perhaps this could be a way towards a progressive class structure for
licencing - much better than a once tested morse capability IMO - how it
would be tested and administered would be interesting though.

Being an amateur with some technical ability, it alarms me to see the way
that some folk "dive in" with little knowledge. Yes, I have had somebody
bring a (domestic) radio in saying "I tightened all the loose screws" :-)

BTW Gary, two things, I think that you have a lot more faith with the
designers than I do and what do you use your little brass & ferrite ended
gizmo for - other than to find out which way to turn the core? I found it a
lot easier to look at the display from a wobbulator to tell me which way to
go.

SSB fidelity is at the mercy of the mechanism that filters out or cancels out the opposite sideband. You can undo some of the audio frequency response tailoring, but not all. And, you can't reduce audio distortion introduced through the sideband filtering process. This is why real audiophiles use AM.

Barry In the old days of discrete component sets a dry joint would cause these sorts of problems. with PCB bad through plating or a section of track that has gone HR because the original stock board was not up to spec. Often it is a very small low resistance change in a common mode in the emitters of a transistor pair that are not in parts of the circuit which should be common mode.
Finding the problem could be a bugger. If you have the available boards then substitution of boards should get it down to which board the problem is on. It could be in supply lines a dud through capacitor in the supply lines can reek havoc.
Try reducing the supply voltage and see if the effect gets better or worse.
One method that I have used with success is a transistor radio and head phones. holding the trany over the various parts of the circuit the amount of interference on the tranny can be monitored. I've even used this method on digital circuits with good results. A bit of software not running at speed has a different sound to to the same software running on a good machine. By knowing what it should sound like and jiggling components on the faulty board even as little as bringing the extra capacity of the hands near to the faulty region is sufficient to say start looking for a mechanical fault around those few components.
The problem with any feed back problem is that the fault appears to be in every part of the circuit at once; it is necessary under such conditions to fault find dynamically, make small changes in various parts of the circuit by adding damping etc either with the little plastic tool mentioned above the capacitor and resistor plus crock clips. cold air, a hair dryer.
Definitely board swapping will bring you into the region of the fault the quickest. This is where the manufactures scores because he has spare boards and he has a good set to compare any unusual meter readings under various

operating conditions. The ham on the bench has difficulty competing with these facilities.

Good luck

> amateur bands are harmonically related:)

Indeed, but this falls into the ground of experimental work with new designs being synthisised form building blocks of existing equipment. Under those circumstances the old blocks treated in the same old way as at manufacture may be quite inapproptiate. But under these circumstances you are taking the initiative to produce something new. I had in mind smething a little different where a ham acquires a new bit of kit and is unhappy until he's /she's had the top off and had a goog poke at everything with a Woolworths screwdriver. Then disenchanted they try to dump this bit of kit that they have s[poilt upon an unsuspecting twerp at a near new price. I would suggest that if you want to buy a bit of kit that you look very carefully at the trimmers and slugs to see if there is any eveidence of twiddling. Also just look at the screw heads of the securing screws of the case if they show the slightest sign of having been touch with a screw driver immediate knock the price down to under 10% of the as new price.

> A poorly adjusted pi tank output stage or overdriven PA can do as much
> damage from the interference viewpoint as misalignment in the earlier

Too right , pity the self training element has to happen on air :)

> Regarding the specific case of the FT101, from what I recall, these
> adjustments solely alter the drive levels to the PA stage and have no
> significant effect upon spurious emmissions.

If you over drive any stage it will run into a non-linear region and spurious will be generated. Look for it with modulation applied.

>I am one of the fortunates

> any amateur willing to take the covers off his kit (certainly most of my
> generation) should attempt this adjustment.

It would help if the person doing so had a little more knowledge than that
required by the RAE. It would also help if the Ham had a few practical
lessons under supervison of some of the old hands.

> I would certainly agree that adjusting modern kit (my definition) should

> approval will come with it. Moves towards painless access to the
> amateur bands are not helping.

Time will, tell.
If More hams would take further training as suggested above so that the
standard rises it would go some way to ameliorating the situation where type
approval was inevitable.

The introduction of only type approval would be a sad day IMHO, but there
could be a centre ground where extra qualification brings extra privileges.

<big snipperoo>

Thanks Gary.

Quite by chance, I have just been given another '101ZD, in excellent nick and known to be good on all bands but with burnt-out mains transformer, so I'm able to do some board swapping.
I must admit that I don't like the idea because when I finished my 5yr apprenticeship and could call myself a time-served, City & Guilds qualified Radio & TV serviceman, 'bottle-swappers' were very much second-class citizens. however that was in the days when TV's were full of EF80's etc. and I immediately left the trade to enter Drama school.

I suppose that board-swappers are today's bottle-swappers and probably call themselves 'electronic' engineers, (rather than 'electronics engineers) as though they need to switch themselves on in the morning. Ho hum. I suppose that the real engineers have become reconciled to referring to themselves as graduate engineers.

None of that has anything to do with solving the problem of course. Thanks again for your ideas and suggestions Gary, time to finish off one of the homebrew projects so that I can at least get on 80 Mtrs with the 101 on the bench.

I have a Micor Base converted a repeater.
All ready to go on 146.700/146.100 .
It has a 100w solid state final, with output turned down to 50w
for better repeater operation.
It has new helical filters on front end installed,
and retuned by local Motorola tech on the 2m band for full
sensitivity on 2 meters.
It comes with the service manual.

It comes with a Scom 7k controller,
with all options, including pl, and auto patch.
The scom 7k comes with the user manual,
and windows programming software.

The duplexers are made by Telewave.

Model numbers are as follows;
Motorola Micor) 893RCB-3145B-RH52
Telewave duplexers) TPRD1556
Scom 7k controller

I am asking a fair price.

Please, serious inquiries only, buyer pays shipping,
and insurance.

The HTX-10 uses a "different" chip from the "other" branded versions of that radio & will not allow any Mars/cap/CB or other freq mods. Purchase the identical 25W RF limited "Magnum 257" or the "Superstar 4000+", or the 12W version called the "TITAN II" if you need that radio w/ MARS/CAP capability. http://home.att.net/~advancedspec/

Why not just pick up that new Heil Goldline mike? The frequency range is very wide, 60Hz to 16kHz.

The other question, even if you create a hi-fi type sound with your transmitter, will anyone else be able to hear it, given the audio constraints of today's ssb receivers?

One other thought: whenever I've produced radio and tv commercials, we've always mixed the audio to sound good on a bad speaker, that is, a typical 2- or 3-inch speaker like you'll find in a low-end clock radio or tv. Whatever you do to your audio processing, you should listen to it though a second receiver, just to hear what you're putting out.

I use a HL-2200 as my dedicated AMTOR amp and is a
real workhorse for 100 percent duty cycle. It is basically
the same amp as the SB-220 only it is the newer style
cabinet. As with all 2KW amps, you should run them on
220 VAC not 110.

Walt.

Indeed. Relatively modern equipment (that includes stuff built in the 70s)
does not go out of alignment on its own. It almost always has been helped
along by "screwdriver drift". Some amateurs seem to feel the need to
"realign" any piece of equipment that they get. That urge should be forcefully
resisted. They will almost always wind up with something which doesn't
work as well as if it were left with the factory alignment. (Very old radios
may have components which have shifted way out of tolerance. The preferred
approach here is to replace those out of tolerance components rather than
twiddling the alignment in an attempt to compensate for them.)

Note, a stage which has had components replaced may require a slight
realignment, but just that stage, not the entire radio. If extensive modifications
have been done to a radio, or it is being shifted far from its original design
frequencies, some greater amount of realignment may be necessary. Otherwise,
the factory alignment should be left alone. The designers generally knew what
they were doing when they specified how the radio was to be aligned at the
factory. You'll generally just screw things up if you try to twiddle it.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

I'm interested in buying a HF receiver, for space shuttle
retransmissions mostly. Been checking on the lower priced used ones like
RS DX394 and DX398 SW radios. What worries me is this Beat Frequency
Oscillator thing I keep hearing about. This is what I'm trying to
understand.................
Retransmission of Shuttle air-to-ground audio from WA3NAN may be heard
on the following frequencies: Then after these freqs. it says......
Where SSB is Single-Side-Band and LSB, USB indicate either Lower and
Upper Side Band. A short-wave receiver possessing a Beat Frequency
Oscillator (BFO) is needed to receive these transmissions. Now I'm lost.
Do most Shortwave radios have this (BFO). Does the DX394 or DX398 have
this? If not what is the next best thing? Info on this will be GREATLY
GREATLY APPRECIATED. Rocky

try http://www.pacparts.com this is Kenwood's offical OEM
parts center. Go into the site as a guest and pick Kenwood
and choose model rather than part, and put in TH-78A and you
will be presented with an entire list of items you can get
from them for your radio. Usually they will have service
manuals and owners manuals. And if it isn't listed, CALL
them anyway and ask them to check most times they will have
stuff or can get stuff that isn't listed.. You'd probably
pay about 5 or 10 dollars + shipping for an Owners manual.

this is a followup to my original post to you on where to get a
owners manual for the TH-78A.. I sent this message to the group
and your mailbox, but only sent the original message to the group.

I went ahead after I had posted the one reply suggesting to go to
www.pacparts.com and just out of curiosity I did so myself and did
a search for the TH-78A they have the Owners Manual, here is the
info:

Part Number: B62-0248-00
Description: OWNERS MANUAL
Price: $11.36
Substitute: B62-0248-60
Currently In Stock

http://www.pacparts.com

their toll-free phone number is:
Consumer Electronics: (800) 421-5080
Faxes: (800) 782-5747

Give em a call if you have a credit card they will ship
one right to you, just give them that part number.

Just to give you some idea about these people, I had exelent
experince with them, I dropped my TH-G71A on the floor and
broke the SMA antenna connector mounted to the radio. Even
though the radio was within its factory warenty I didn't want
to spend a lot of money shipping the radio away for who knows
how long to Kenwood just to replace a 2 dollar part, so I used
pacparts.com found the connector I needed and ordered it on
the phone. 3 days later my part arrived. With a bit of soldering
and 5 minutes of labor I had my new antenna connector on and
I'm using the radio even as I type this now.

If you own any kenwood radio you should always have pacparts.com
bookmarked because they stock most if not all parts for Kenwood
radios.

Good luck getting the manual.. Jimmy KB5FSV

>STUPID QUOTE:" The people that sell this stuff should not get income
>from valid hams.."'
Have you checked your Ham magazines latley?? For Example, "Lentini
Communications" in Newington CT (home of ARRL) Has a full page in every Popular
communications magazine that show such things as the "Northstar 40ch" AM "10
meter" radios w/ built in roger beep & echo-reverb. AES (amateur electronic
supply) the big "chain store" , sells the RCI-2950/70 10 meter radios, that
after you "move a jumper" they operate 26-30Mhz & display the actual "CB"
channel numbers. Ham Radio Outlet sells the "Magnum 257" which is the
modifyable version of the HTX-100....most "HAM" dealers sell this stuff, & the
mod books to convert. Don't be a hippocrite. There's a post very day asking
how to "mod" EVERY ham rig out there, & I would guess an Illegaly mod-ed 2M/440
rig could cause a lot more "trouble" between 150-170/ 450-470 that someone on
CB ch 19 or on 27.555. I'm NOT for using any ham gear on an illegal freq, but
it does bother me when "some" people ONLY come down on modded 10M rigs, & not
other ham gear. (there ain't no MARS/CAP frequencies above 149Mhz)
> Another QUOTE: "The hams that still operate illegal CB gear (anything that
>is not type accepted for CB which includes any modified gear that was
>previously type accepted) are not really hams. They are just taking
>advantage of these legal privileges while still abusing FCC laws......"
WHAT???? A legally licensed ham legally using a converted CB rig on 10
meters isn't really a Ham?? There have always been articles through the years
in all the major ham magazines on how to LEgally convert a CB rig to 10M, it's
a fun project, low cost, loads of Hams do it & they are REAL hams. Many people
PREFER to build or modify their own gear rather than "buy" a multi-kilobuck
rig. You have a strange "litmus test" for dealers & Hams that would eliminate
all but you & your 4 friends......

Source record: 92507

Hello...the specs are both correct...above the tower...not suggested will be about 2.5-3.0 but very unstable...inside the tower, much stronger and 7.5 is probably a tad on the high side but your antenna should be ok in the tower with this rotator...above the tower...forget it!! The A-3 is a small antenna but the problem with it is that the boom is too small for the actual weight of the combined weight of the elements. Trussing is suggested by the manufacturer and the antenna, while in the air looks unstable, but it works fine. If you add the 40 meter add on kit, get yourself another rotator as the 44 will not handle it......my 2 cents worth....Lonnie (NT6B)

From: LONNIE <NT6B-VK7LM@DREAMSOFT.COM>
Message-ID: <384BE485.E4E64784@DREAMSOFT.COM>
Source record: 92509

Hi Andrew...although close to the SB-220, the HL-2200 lacks 10 meters and although the circuit appears to be the same, they are different when you look closely and compare components. Using the amps on 220 volts is the most efficient and the amp will give you about 55 percent performance however getting more than about 1,200 watts on 20 meters, is about all you will experience and on other bands it has much lesser power levels. In most instances the Caps should be replaced unless the amp has had steady use. Use Harbachs mods if your of that inclination especially for soft start and parasitics, which are a problem for these 3-500Z amps....I have both and they both are good performers however adding 10 meters to the HL-2000 is not easy and certainly not economical. I use the SB-220 on 6 meters and its a screamer....dedicated circuit and I added 10 meters to the 2200...there you go...first hand and I'm not left handed....Lonnie (NT6B)

4738. Re: Timewave 599zx and Icom 735

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-06 00:00:00 UTC
From: Cortland Richmond <Cortland.Richmond@usa.alcatel.com>
Message-ID: <384BED62.56B51002@usa.alcatel.com>
Source record: 92510

Lee,

There should be a pin on the ACC out on the 735 which is ground during transmit. This should be the output you are looking for. I suspect TimeWave uses PTT to the DSP to allow CW sidetone through the unit without it being processed. It takes some time to process the audio and delaying sidetone 125 msec (as my SGC PowerClear does) makes it unusable for CW with internal sidetone.

Don't know that one, but you can go to the INRAD website where
they sell the Collins mechanical filters, and I think they cross
reference them for models. If not, I bet they can tell you there.

Go to www.qth.com/inrad/

INRAD also explains that the crystal filters they sell have far
better specs as far as shape factors, and they are cheaper. I
never quite understood the big deal about the Collins filters,
other than that you can pay more.

Yes perhaps it could starting at CB where it currently is at then a series
of progressive examinations each giving additional privilages.

to
> go.

May I direct your attention to the fact that the physical size and the cost
of purchase are at the opposite ends of the spectrum for the tuning wand and
the wobbulator. How many hams have a wobulator? How many hams could carry
one in their top pocket? How many hams have a scope? Of course a wobbulator
alone is insufficient for good results; a good calibration oscilator is also
required.

However for an If amp where a whole series of tuned transformers are used
the wobulator will not tell you which transformer to tune the tuning wand in
conjunction with the wobbulator will make the job very much easier.

If anyone is paying for the wrecked gear then they are of course entitled to
use absolutely any method that they choose.

They are just saying you need a decent receiver capable of receiving single sideband transmissions - this is done by use of a "product detector" in modern receivers - or beat-frequency oscillators (BFO) in older sets...

Gary,
I was really thinking about the satisfaction I feel when a difficult and
obscure fault has been located and repaired.
Board and bottle swapping - for all of your high-minded hyperbole -
doesn't give an ounce of it, I fear.

Thanks for the good wishes.

Oh. By the way, I have got a (homebrew) wobbulator.

Hello all! I have a UHF HT-1000 for sale, is high split (450-512 MHz,) but will program out of band split. I had all amateur frequencies programmed, but the carrier or tone squelch would not open up on one of my favorite repeaters, output 442.000.....too darn close to the edge of it's capability when programmed out of band, I suppose. It would receive just fine if I pressed the manual MONITOR button, though. Works fine and within spec on the rest of the frequencies above that 442, though. I got glowing audio reports wherever I went with this rig, typical Motorola quality at work here, but am buying an amateur HT for amateur work. Radio is a 9.5 out of ten cosmetically, with a few minor scuffs and scratches on the front. Is an intrinsically safe model (for hazardous atmospheres,) factory mutual approved, and so marked on the base (with the green dot and triangle,) a good choice for emergency services / confined space / mine / industrial type work (with the proper batteries.) Package comes with radio, standard rubber whip antenna, THREE batteries (two of which are virtually brand new, but all working HARD!,) and a standard rate charger. Radio model number is H01SDC9AA3DN. I want only $400 for the entire package, which is a fine deal. I will guarantee that the radio is working 100%, with no problems when you receive it. Buyer will pay shipping and insurance by his choice of carrier. E-mail me at:

jdavoli@nospamerols.com

and remember to remove "nospam" from the address.

Thanks for looking!

Joe Davoli, KB3DMF

4748. FT-2700 Lamp Replacement?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-06 00:00:00 UTC
From: &retired0 <&retired0@hotmail.com>
Message-ID: <384C2156.3BDE814B@hotmail.com>

The display lamps on my Yaesu FT-2700 mobile have died.
I have the service manual. They're shown as incandescent.
But there are no pix of the display unit. Are these lamps
replaceable? Or are they built into the LCD as a unit?
Anything special about the bulbs?
I have some "grain-of-wheat" 18V lamps.

Does it come apart easily enough that it's likely to work
when I put it back together?

Anybody tried putting in green leds so this doesn't happen
again?

Ideas for easy ways to make it light up again???
TIA. mike

Email Yaesu. They may have the proper lights in longer lasting form (rating). Like 10000 hr. There cheap, except for the minimum shipping charge. So figure out all the little Yaesu parts, pieces and covers (etc...) you need and order them under the same shipping charge.

You can of course have Yeasu put them in. That's very expensive (I think) and time away from your rig.

By the way, complain about the shipping and maybe Yaesu with give it's customers a break. {'!'}

P.S. Plus, write them a letter saying how to build a good rig again (HiHi). Include that they should keep the usefull features into the new models too.

4750. How to measure touchtone twist?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-06 00:00:00 UTC
From: &retired0 <&retired0@hotmail.com>
Message-ID: <384C237D.7BE0C3C4@hotmail.com>
Source record: 92522

I'm having trouble with touchtone control.
I'd like to start by verifying the twist
of my transmitted touchtones.
In the old days, you could push two keys on the keypad
and get one tone. Made it duck soup to check the
relative amplitudes of the individual frequencies
on a service monitor.
Just tried this on a newer radio and found that I
can't get just one tone.
So, what's an easy way to measure the relative
amplitudes of the tone pair?
Tia, mike

Alex,

I've had my dx-70th for about 4 months now and I thnik it's great.
It doesn't have alot
of bells & whistles but it makes up for it in simplicity and
reliability. I am using it mobile
with a 10m & 17m hamsticks and am happy with the results. I can't wait
to take it with
me to our annual rented summer cottage in southern Maine to see who I
can contact.
Makes a great field-day rig also because it's soo simple to operate.
